Introduction	V
Acknowledgements	VIII
1 Material Properties for High Temperature Applications ...	1
1.1 Technical Demands and Historical Outline	1
1.2 Mechanical and Thermal Properties of Materials for High Temperature Service	3
1.3 Macroscopic (Effective) Properties of Two-Phase Composites..	11
2 Thermodynamics of Constitutive Modelling of Damaged Materials	13
2.1 Effect of Damage on the Mechanical and Thermal Properties of Materials	13
2.1.1 Heat Conduction in Damaged Materials	13
2.1.2 Effect of Damage on the Elastic Stiffness of Materials ..	15
2.2 Thermodynamic Framework for Constitutive Modelling of Elasto-Plastic-Damage Materials	18
2.2.1 State Coupling	18
2.2.2 Dissipation Coupling	19
2.2.3 State and Dissipation Equations for Elasto-Plasticity Coupled with Damage	22
2.2.4 Unilateral Damage Concepts	26
2.2.5 Continuous Damage Deactivation	29
3 Developing and Implementing Selected Constitutive Models for Elasto-Plastic-Damage Materials	33
3.1 The Constitutive Model of Elastic-Damage Material	33
3.1.1 Incremental Formulation of the Constitutive Equations .	33

3.1.2	Numerical Simulation of Damage and Fracture in Plane Concrete Structure in the Presence of an Initial Crack using the Local Approach.....	40
3.1.3	Nonlocal Formulation of the Constitutive Equations ...	45
3.1.4	Numerical Simulation of the Nonlocal Damage and Fracture in a Double-Notched Plane-Stress Concrete Specimen.....	49
3.1.5	Numerical Simulation of Fracture in a Double-Notched Plane-Stress Concrete Specimen by use of the Nonlocal Equivalent Crack Concept.....	58
3.2	Constitutive Models of Elasto-Plastic-Damage Materials	61
3.2.1	The Modified Hayakawa–Murakami Constitutive Model of Thermo-Elasto-Plastic-Damage Materials	61
3.2.2	Application to Monotonic and Cyclic Uniaxial Loading Conditions	70
3.2.3	Prediction of Damage and Plastic Evolution in the Plane notched FCD400 Cast Iron Specimen.....	77
3.2.4	Low Cycle Fatigue of Specimen Made of 316L Stainless Steel.....	80
3.2.5	Influence of Unilateral Damage on the Yield Potential..	90
4	Developing and Implementing Constitutive Models for Specific FGM Applications	93
4.1	Simulation Methodology for Properties Gradation in FGMs ...	93
4.2	Application of the Concept of FGMs to Simple Thermo–elasto–plastic Structures.....	97
4.2.1	Study of CrN/W300 TBC System Under Cyclic Thermal Loading	97
4.2.2	Stability Analysis Against the Hot-spots in a FG Thermo–elastic Brake Disc	106
4.2.3	Modelling of FGM Al/ZrO ₂ +Y ₂ O ₃ Engine Pistons	117
4.3	Developing and Implementing Models of the Coupled Thermo–elasto–plastic–damage FGMs for Thermomechanical Applications	134
4.3.1	Extension of the Thermo–elasto–plastic–damage Model by the FGMs Concept	134
4.3.2	Prediction of Damage in the Plane-stress Notched Specimen by use of FGMs Under Mechanical Loading ..	140
4.3.3	Analysis of a Problem with the ZrO ₂ /FCD400 TBC/FGM/S System Under Thermal Loading	145
5	Microstructural Analysis and Residual Stress Determination based on Scattering of Neutrons and X-ray Synchrotron Radiation	151
5.1	Introduction to the Scattering of X-rays and Neutrons	151

5.1.1	Unperturbed beams	151
5.1.2	Interactions.....	153
5.2	Microstructural Investigations by Small Angle Scattering of Neutrons and X-rays	161
5.2.1	Introduction	161
5.2.2	Theoretical Bases	161
5.2.3	Experimental Methods and Data Analysis	166
5.2.4	Recent Applications to Materials of Technological and Industrial Interest	169
5.3	Residual Stress Determination by Neutron and X-ray Diffraction	176
5.3.1	Introduction	176
5.3.2	Residual Stress Classification	178
5.3.3	Techniques for Residual Stress Determination	178
5.3.4	Elastic Stress-Strain Relations	179
5.3.5	Principle of Strain Determination	180
5.3.6	Experimental Facilities	182
5.3.7	The Stress-free Reference Sample	183
5.3.8	Metal Matrix Composites	184
5.3.9	AA359 + 20 vol.% SiC _p Brake Drum	185
5.3.10	MMC's Drive Shaft for Helicopter	187
5.3.11	Welds	188
5.3.12	Cold Expanded Hole	188
5.3.13	Shot Peening	191
5.3.14	Residual Stress Study of Laser Shock Peening for Ti-6Al-4V Alloy for Aerospace Application	191
5.3.15	Reed Pipe Brass Tongues of Historic Organs	192
5.4	Three-dimensional Imaging by Microtomography of X-ray Synchrotron Radiation and Neutrons.....	194
5.4.1	Tissue Engineered Bones	197
5.4.2	Al+4% ZS Composites	197
5.4.3	Sintering of Cu Particles	200
5.4.4	Al Foams.....	201
5.5	Specific Investigations of Functionally Graded Materials (FGM) Systems for High Temperature Applications.....	203
5.5.1	Residual Stresses in W/Cu FMG	204
5.5.2	Neutron Strain Mapping within Ni/Al ₂ O ₃	205
5.5.3	Residual Stresses in Ni/8Y-ZrO ₂ FGM.....	206
5.5.4	Residual Stresses in WC/Co FGM.....	206
5.5.5	Small Angle Scattering Experiments	207
5.5.6	SAXS on a Thermal Barrier Coating.....	208
5.5.7	Residual Stresses and SANS on Al ₂ O ₃ /Y-ZrO ₂ FGM ..	208
5.5.8	MicroCT on Al/SiC _p FGM	209

A	Appendix: European Sources of Neutrons and X-ray Synchrotron Radiation and their Main Instrumentation	... 211
A.1	Neutron Sources and Laboratories	211
A.1.1	ILL Grenoble (France)	211
A.1.2	ISIS (UK)	211
A.1.3	Laboratoire Léon Brillouin (LLB) Saclay (France)	212
A.1.4	BENSCH, Berlin (Germany)	212
A.1.5	Other European Neutron Sources	212
A.2	Synchrotron radiation sources	212
A.2.1	ESRF Grenoble (France)	212
A.2.2	ELETTRA Trieste (Italy)	213
A.2.3	HASYLAB Hamburg (Germany)	213
A.2.4	SOLEIL Paris (France)	214
A.2.5	DIAMOND Oxford (United Kingdom)	214
A.2.6	Other European synchrotron sources	214
	References	215
