Part I Face Recognition Applications

Skin-based Face Detection-Extraction and Recognition of Facial Expressions

<i>N. Bourbakis and P. Kakumanu</i>	3
1 Introduction	3
2 Neural color constancy based skin detection	4
3 Image segmentation	5
4 Local region graph (Facial feature region graph)	6
4.1 Facial feature matching using local graph	7
5 Skin region synthesis	9
5.1 Neighbor region searching and region synthesis	9
6 Matching multiple regions with Local Global (LG) Graph method ..	11
6.1 Image Representation with Local Global (LG) Graph	12
6.2 LG Graph matching	13
7 Experimental results	18
7.1 Effect of feature shape and spatial deformations on LG graph matching	18
7.2 Effect of the missing facial features (nodes) and partial LG graph matching	19
8 Extending LG Graph method for recognizing facial expressions	20
9 Conclusions	22
References	23

Facial Image Processing

<i>Xiaoyi Jiang and Yung-Fu Chen</i>	29
1 Introduction	29
2 Removal of glasses	31
3 Facial expression synthesis	34
4 Eye synthesis	36
5 Redeye removal	40

VIII Contents

6	Restoration of facial images	42
7	Artistic processing of facial images	42
8	Facial weight change	43
9	Conclusion	43
	References	45

**Face Recognition and Pose Estimation
with Parametric Linear Subspaces**

	<i>Kazunori Okada and Christoph von der Malsburg</i>	49
1	Introduction	49
2	Problem Overview and Definitions	52
	2.1 Statistical Models of Pose Variation	52
	2.2 Pose-Insensitive Face Recognition	53
3	Parametric Linear Subspace Model	56
	3.1 Linear PCMAP Model	56
	3.2 Parametric Piecewise Linear Subspace Model	61
4	Interpersonalized Pose Estimation	64
5	Experiments	65
	5.1 Data Set	65
	5.2 Personalized Pose Estimation and View Synthesis	66
	5.3 Pose-Insensitive Face Recognition	69
	5.4 Interpersonalized Pose Estimation	70
6	Conclusion	71
	References	72

Part II Spatio-Temporal Patterns

**4D Segmentation of Cardiac Data Using Active Surfaces
with Spatiotemporal Shape Priors**

	<i>Amer Abufadel, Tony Yezzi and Ronald W. Schafer</i>	77
1	Introduction	78
2	Method	81
	2.1 Combining Space and Time	81
	2.2 Adding time to shape-based segmentation methods	82
	2.3 Generating Training Data	84
	2.4 Segmentation	88
3	Periodic data	90
4	Results	90
	4.1 Consistency Tests	91
	4.2 Accuracy Tests	96
5	Conclusion	99
	References	99

Measuring Similarity Between Trajectories of Mobile Objects

<i>Sigal Elnekave, Mark Last and Oded Maimon</i>	101
1 Introduction	101
2 Related Work	103
2.1 Spatio-temporal data collection	103
2.2 Representing spatio-temporal data	104
2.3 Spatio-temporal data summarization	106
2.4 Querying spatio-temporal data	107
2.5 Indexing trajectories of moving objects	108
2.6 Clustering moving objects and trajectories	110
2.7 Spatio-temporal group patterns mining	111
2.8 Incremental maintenance of mobile patterns	113
2.9 Predicting spatio-temporal data	113
2.10 Spatio-temporal similarity measures	114
2.11 Spatio-temporal data generation	115
2.12 Summary of related work	116
3 Specific methods	116
3.1 An Algorithm for MBB-Based Trajectory Representation	116
3.2 Defining a new similarity measure	119
3.3 Clustering trajectories with the K-Means Algorithm	120
3.4 Using incremental approach for clustering	121
4 Evaluation Methods	121
5 Evaluation Experiments	122
5.1 Generating spatio-temporal data	122
5.2 Detailed Results	123
6 Conclusions	125
References	126

Part III Graph-Based Methods

Matching of Hypergraphs — Algorithms, Applications, and Experiments

<i>Horst Bunke, Peter Dickinson, Miro Kraetzl, Michel Neuhaus and Marc Stettler</i>	131
1 Introduction	131
2 Preliminaries	133
3 Hypergraph Matching	137
4 Algorithms for Hypergraph Matching	140
5 Experimental Results	144
5.1 Experiments on Synthetic Data	144
5.2 Experiments on Pseudo-real and Real Data	147
6 Conclusions	152
References	153

Feature-Driven Emergence of Model Graphs for Object Recognition and Categorization	
	<i>Günter Westphal, Christoph von der Malsburg and Rolf P. Würtz</i> 155
1	Introduction 156
2	Learning Set, Partitionings, and Categories 158
3	Parquet Graphs 162
3.1	Similarity Function 164
3.2	Local Feature Detectors 164
4	Learning a Visual Dictionary 165
4.1	Feature Calculators 165
4.2	Feature Vectors 167
5	Preselection Network 168
5.1	Neural Model 170
5.2	Position-Invariant Feature Detectors 170
5.3	Weighting of Feature Detectors 171
5.4	Neurons, Connectivity, and Synaptic Weights 172
5.5	Saliencies 175
5.6	Selection of Salient Categories and Model Candidates 175
6	Verification of Model Candidates 177
6.1	Construction of Graphs 177
6.2	Matching 181
6.3	Model Selection 182
7	Experiments 182
7.1	Object Recognition 183
7.2	Object Categorization 191
8	Summary and Future Work 196
	References 197

Part IV Special Applications

A Wavelet-based Statistical Method for Chinese Writer Identification	
	<i>Zhenyu He and Yuan Yan Tang</i> 203
1	Introduction 203
2	A Classic Method for Writer Identification: Two-Dimensional Gabor Model 206
3	Our Algorithm for Writer Identification 207
3.1	Preprocessing 208
3.2	Feature Extraction Based on Wavelet 209
3.3	Similarity Measurement 214
4	Experiments 215
4.1	Identification performance evaluation 1 215
4.2	Identification performance evaluation 2 217

5	Conclusions	219
	References	219
 Texture Analysis by Accurate Identification of a Generic Markov-Gibbs Model		
	<i>Georgy Gimel'farb and Dongxiao Zhou</i>	221
1	Introduction	221
2	Identification of a generic Markov-Gibbs model	222
	2.1 Basic notation	222
	2.2 Generic MGRF with pairwise interaction	223
	2.3 Accurate first approximation of potentials	224
	2.4 Model-based interaction maps (MBIM)	228
3	Characteristic Structure and Texels	232
4	Texture Synthesis by Bunch Sampling	236
5	Comparisons and conclusions	237
	References	244

Applied Pattern Recognition
