## Part I Integrable Hamiltonian Hierarchies: Spectral Methods

---

<b>1</b>	<b>Introduction</b>	<b>3</b>
1.1	Brief Historical overview	3
1.2	Fundamental Properties of the Soliton Equations	7
1.2.1	Solving Nonlinear Cauchy Problems	7
1.2.2	Hierarchies of Soliton Equations	9
1.2.3	Linearized NLEE and Fourier Transform	9
1.2.4	Integrals of Motion	11
1.2.5	Soliton Solutions and Soliton Interactions	11
1.2.6	Hamiltonian Hierarchies	12
1.2.7	Exact Integrability and “Action-Angle” Variables	14
1.2.8	The Hierarchy of Bäcklund and Darboux Transformations	14
1.2.9	Gauge Equivalent Hierarchies	16
1.3	The ISM as the Generalized Fourier Transform	17
1.4	Related Developments, Bibliography and Comments	26
	References	26
<b>2</b>	<b>The Lax Representation and the AKNS Approach</b>	<b>37</b>
2.1	The Lax Representation in the AKNS Approach	37
2.2	The Recursion Operators and the NLEE	41
2.3	Evolution of the Scattering Data	43
2.4	Generalizations of the AKNS Method I	46
2.5	Generalizations of the AKNS Method II	52
2.6	Comments and Bibliographical Review	58
	References	61

<b>3</b>	<b>The Direct Scattering Problem for the Zakharov–Shabat System</b>	71
3.1	Analytic Properties of the Jost Solutions	71
3.2	The Spectrum of $L$	77
3.3	Asymptotic Behavior for $\lambda \rightarrow \infty$	80
3.4	The Dispersion Relation for $a^\pm(\lambda)$	81
3.5	Minimal Sets of Scattering Data	84
3.6	Spectral Representations of the Jost Solutions	86
3.7	Completeness of the Jost Solutions	88
3.8	Comments and Bibliographical Review	92
	References	93
<b>4</b>	<b>The Inverse Scattering Problem for the Zakharov–Shabat System</b>	97
4.1	Derivation of the GLM Equation	97
4.2	Derivation of GLM Equation from the Completeness Relation (3.111)	100
4.3	The Riemann–Hilbert Problem	103
4.3.1	The Additive RHP for Scalar and Matrix Functions	103
4.3.2	The Multiplicative RHP for Scalar Functions	105
4.3.3	The Multiplicative RHP for Matrix-Valued Functions	107
4.4	The Zakharov–Shabat Dressing Method	109
4.4.1	The RHP and Singular Integral Equations	112
4.4.2	Reflectionless Potentials	113
4.4.3	The 1-Soliton Case	115
4.5	The Dressing Method: The Singular Solutions	116
4.6	Soliton Interactions	120
4.7	Comments and Bibliographical Review	124
	References	127
<b>5</b>	<b>The Generalized Fourier Transforms</b>	133
5.1	The Wronskian Relations	134
5.1.1	The Mapping from $q$ to $\mathcal{T}$	134
5.1.2	The Mapping from $\delta q$ to $\delta \mathcal{T}$	137
5.1.3	Still More Wronskian Relations	138
5.2	Completeness of the “Squared” Solutions	139
5.2.1	The Symplectic Basis	143
5.3	Expansions Over the “Squared” Solutions	144
5.3.1	Expansions of $q(x)$	146
5.3.2	Expansions of $\sigma_3 \delta q(x)$	147
5.4	Generating Operators Revisited	149
5.5	Spectral Properties of the $\Lambda$ -Operators	152
5.5.1	The Biquadratic Relations	153
5.5.2	Biorthogonality of the Squared Solutions	156
5.5.3	The Green Functions of $\Lambda_\pm$	157

5.6	Expansions Over the “Products of Solutions”	159
5.6.1	Generalized Wronskian Relations	159
5.6.2	Expanding $X(x)$ Over the “Products of Solutions”	164
5.6.3	Generalized Recursion Operators	166
5.7	Comments and Bibliographical Review	168
	References	170
<b>6</b>	<b>Fundamental Properties of the Solvable NLEEs</b>	175
6.1	Description of the Class of NLEEs	175
6.2	Examples of NLEEs	178
6.2.1	Polynomial Dispersion Laws	178
6.2.2	Singular Dispersion Laws	180
6.3	Involutions of the Zakharov–Shabat System	183
6.4	Fundamental Properties of the Soliton Solutions	187
6.4.1	The $M$ -Operators in Terms of $A_{\pm}$	188
6.4.2	The Trace Identities and $A$ -Operators	190
6.4.3	Recurrent Relations for the Densities of $C_p$	192
6.4.4	Generating Operators and the Integrals of Motion	196
6.4.5	The Lenard Relation	197
6.5	The Class of Bäcklund Transformations	198
6.6	Comments and Bibliographical Review	203
