

Preface

A good decade after the temporary end of attempts to make driving simulation into an accepted, productive teaching and training technology, new possibilities and chances are on the horizon, motivated by current EU legislation. The author has been involved, in terms of technology and content, in the development of driving simulators and has tracked their progress. This book attempts to take driving simulation seriously as a technology for teaching and training, to demonstrate possible paths for future development and to promote the formation of a community as a basis for future success.

The author would like to thank all the institutions, companies and universities involved for providing him with material, and for their constant willingness to discuss matters. Special thanks go to Prof. R. Bernotat and the Research Establishment for Applied Sciences (Forschungsgesellschaft für Angewandte Naturwissenschaften e.V.) in Wachtberg, Prof. H.-P. Willumeit and Berlin University of Technology, and all staff and students, for the years of factual, financial, technological and personal support. On behalf of the above I would like to thank the translator, Anne Koth.

Although the masculine gender has been chosen in the text for convenience, the information applies equally to the feminine gender.

Smart Driver Training Simulation

Save Money. Prevent.
