

# Table of Contents

<b>Foreword .....</b>	<b>V</b>
<b>Part I Theoretical Models for Photonic Crystals .....</b>	<b>1</b>
<b>Introduction to Part I.....</b>	<b>3</b>
<b>1 Models for Infinite Crystals .....</b>	<b>5</b>
1.1 Plane Wave Expansion.....	5
1.1.1 Maxwell's Equations .....	5
1.1.2 The Floquet-Bloch Theorem .....	6
1.1.3 Hermiticity of the Field Operator.....	10
1.1.4 Simple Examples of Bloch Functions.....	11
1.1.5 General Plane Wave Method .....	13
1.2 Other Methods for the Calculation of the Photonic Band Gaps of an Infinite Crystal: the KKR Method .....	21
1.3 Photonic Band Diagram .....	21
1.3.1 The Irreducible Brillouin Zone .....	22
1.3.2 Band Diagrams of One-Dimensional Crystals .....	25
1.3.3 Band Diagrams of Two-Dimensional Photonic Crystals.....	33
1.3.4 Off-Axis Propagation in One and Two-Dimensional Photonic Crystals.....	40
1.3.5 Band Diagrams of Three-Dimensional Photonic Crystals.....	41
1.4 Infinite Crystals with Defects .....	43
1.4.1 Point Defects.....	44
1.4.2 Coupling of Point Defects .....	50
1.4.3 Supercell Method.....	52
1.4.4 Methods derived from Tight-Binding Methods in Solid State Physics.....	53
1.4.5 Extended Defects.....	54
1.4.6 Semi-Infinite Crystals and Surface Defects.....	56
1.4.7 Density of States in Photonic Crystals with or without Defects.....	59
<b>2 Models for Finite Crystals.....</b>	<b>65</b>
2.1 Transfer, Reflection and Transmission Matrix Formulations.....	65
2.1.1 Reflection and Transmission Matrices .....	66
2.1.2 Pendry Method.....	72

2.2 Finite Difference in Time Domain (FDTD) Method .....	80
2.2.1 Numerical Formulation of Maxwell's Equations.....	80
2.2.2 Case of an Incident Pulse .....	84
2.2.3 Absorption Region and Boundary Conditions .....	86
2.2.4 Practical Implementation and Convergence of the FDTD Method.....	87
2.2.5 Examples of Results obtained for a Point Source with the FDTD Method .....	89
2.3 Scattering Matrix Method.....	91
2.4 Other Methods: Integral and Differential Methods, Finite Element Method, Effective Medium Theory .....	100
2.5 Numerical Codes available for the Modelling of Photonic Crystals.....	104
<b>3 Quasi-Crystals and Archimedean Tilings.....</b>	<b>107</b>
3.1 Photonic Quasi-Crystals.....	108
3.2 Archimedean Tilings.....	111
3.3 From Photonic Quasi-Crystals to the Localization of Light.....	115
<b>4 Specific Features of Metallic Structures .....</b>	<b>121</b>
4.1 Bulk Metals: Drude Model, Skin Effect and Metallic Losses.....	121
4.1.1 Drude Model.....	123
4.1.2 Low-Frequency Region: Skin Effect and Metallic Losses .....	124
4.1.3 From the Infrared to the Visible and UV Regions .....	125
4.2 Periodic Metallic Structures at Low Frequencies .....	126
4.2.1 Plasmon-Like Photonic Band Gap.....	126
4.2.2 Transmission Spectra of Metallic and Dielectric Photonic Crystals...	129
4.2.3 Complete Band Gaps in Metallic Photonic Crystals.....	131
4.2.4 Structures with Continuous Metallic Elements and Structures with Discontinuous Metallic Elements .....	132
4.3 Periodic Metallic Structures at Optical Frequencies. Idealized Case of a Dispersive Lossless Dielectric .....	134
4.4 Surface Waves.....	137
4.4.1 Surface Plasmons at a Metal/Dielectric Plane Interface .....	137
4.4.2 Propagation of Surface Plasmons along a Periodically Modulated Metal/Dielectric Interface and Local Enhancement of the Field.....	140
4.4.3 Wood's Anomalies: Phenomenological Theory .....	144
4.4.4 Photonic Band Gaps for the Propagation of Surface Plasmons at Periodically Modulated Metal/Dielectric Interfaces .....	148
4.4.5 The Photon Sieve.....	150
4.4.6 Surface Waves in Metals at Radiofrequencies .....	151
<b>Part II Optical Properties of Photonic Crystals.....</b>	<b>157</b>
<b>Introduction to Part II. The 'Many Facets' of Photonic Crystals .....</b>	<b>159</b>
<b>5 Control of Electromagnetic Waves .....</b>	<b>163</b>
5.1 The Photonic Crystal Mirror.....	163

5.1.1 The Semi-Infinite Photonic Crystal: Mirror or Diffraction Grating? .	163
5.1.2 Specular Reflection at a Semi-Infinite Crystal .....	166
5.1.3 Finite Photonic Crystals as Semi-Transparent Mirrors .....	167
5.2 Photonic Crystal Waveguides .....	168
5.2.1 Index Guiding and Photonic Bandgap Guiding.....	168
5.2.2 Three-Dimensional Photonic Crystal Waveguides .....	170
5.2.3 Two-Dimensional Photonic Crystal Waveguides .....	172
5.2.4 Density of States and Multiplicity of Guided Modes.....	174
5.2.5 Coexistence of Index Guiding and Photonic Bandgap Guiding .....	178
5.3 Resonators .....	185
5.3.1 Localized Modes. Origin of Losses .....	185
5.3.2 Density of States .....	187
5.3.3 Waveguide formed by Coupled Cavities.....	188
5.4 Hybrid Structures with Index Guiding. The Light Line .....	190
5.4.1 Light Cone of a Uniform Waveguide .....	190
5.4.2 Fictitious Periodicity .....	191
5.4.3 True One-Dimensional Periodicity .....	191
5.4.4 Channel Waveguides in Two-Dimensional Photonic Crystals .....	195
<b>6 Refractive Properties of Photonic Crystals and Metamaterials.....</b>	<b>197</b>
6.1 Phase Refractive index, Group Refractive Index and Energy Propagation .....	197
6.1.1 Phase Velocity and Group Velocity.....	197
6.1.2 Refractive Indexes and Dispersion Diagrams .....	201
6.1.3 Effective Phase Index and Group Refractive Index .....	202
6.2 Refraction of Waves at the Interface between a Periodic Medium and a Homogeneous Medium .....	203
6.2.1 Summary of Refraction Laws in Homogeneous Media.....	203
6.2.2 Some Well-Known Anisotropic Media: Birefringent Solid-State Crystals.....	205
6.2.3 Construction of the Waves Transmitted in a Photonic Crystal.....	206
6.3 Superprism and Negative Refraction Effects .....	207
6.3.1 Superprism Effect .....	207
6.3.2 Ultra-Refraction and Negative Refraction.....	208
6.4 Metamaterials .....	210
6.4.1 Simultaneous Control of the Dielectric Permittivity and the Magnetic Permeability.....	210
6.4.2 Negative Refraction in a Slab of Perfect Left-Handed Material .....	212
6.4.3 Stigmatism of a Slab of Perfect Left-Handed Material.....	215
6.4.4 Perfect Lens or Superlens?.....	217
6.4.5 Fabrication of Negative Refractive Index Metamaterials .....	218
6.4.6 Electromagnetic Cloaking .....	221
<b>7 Confinement of Light in Zero-Dimensional Microcavities.....</b>	<b>225</b>
7.1 Microcavity Sources. Principles and Effects.....	226

7.1.1 A Classical Effect: the Angular Redistribution of the Spontaneous Emission and the Example of Planar Microcavities.....	226
7.2 Three-Dimensional Optical Confinement in Zero-Dimensional Microcavities .....	245
7.2.1. Different Types of Zero-Dimensional Microcavities.....	245
7.2.2 Control of the Spontaneous Emission in Weak Coupling Regime. Some Experimental Results .....	250
7.2.3 Single-Mode Coupling of the Spontaneous Emission .....	254
7.2.4 Towards Strong Coupling Regime for Solid State ‘Artificial Atoms’ .....	256
<b>8 Nonlinear Optics with Photonic Crystals.....</b>	<b>261</b>
8.1 The Problem of Phase Matching .....	262
8.2 $\chi^{(1)}$ Photonic Crystals .....	265
8.2.1 One-Dimensional $\chi^{(1)}$ Photonic Crystals .....	265
8.2.2 Two-Dimensional $\chi^{(1)}$ Photonic Crystals.....	273
8.3. $\chi^{(2)}$ Photonic Crystals .....	274
8.3.1 One-Dimensional $\chi^{(2)}$ Photonic Crystals.....	274
8.3.2 Two-Dimensional $\chi^{(2)}$ Photonic Crystals.....	277
8.4 Photonic Crystals with Third Order Susceptibility.....	279
<b>Part III Fabrication, Characterization and Applications of Photonic Bandgap Structures .....</b>	<b>283</b>
<b>Introduction to Part III .....</b>	<b>285</b>
<b>9 Planar Integrated Optics.....</b>	<b>287</b>
9.1 Objectives, New Devices and Challenges.....	287
9.2 Fundamentals of Integrated Optics and Introduction of Photonic Crystals .....	290
9.2.1 Conventional Waveguides .....	290
9.2.2 Photonic Crystals in Integrated Optics .....	295
9.3 Planar Photonic Crystals in the Substrate Approach .....	306
9.3.1 DFB and DBR Laser Diode Structures.....	306
9.3.2 Photonic Crystals, a Strong Perturbation for Guided Modes .....	307
9.3.3 Choice of the Diameter of the Holes and of the Period of the Crystal .....	309
9.3.4 Specific Parameters for InP- and GaAs-Based Systems .....	310
9.3.5 Deep Etching .....	310
9.4 Membrane Waveguide Photonic Crystals .....	311
9.4.1 Free-Standing Membranes .....	311
9.4.2 Reported Membranes .....	314
9.5 Macroporous Silicon Photonic Substrates.....	314
9.6 Characterization Methods for Photonic Crystals in Integrated Optics.....	318
9.6.1 Internal Light Source Method .....	318

9.6.2 End-Fire Method.....	321
9.6.3 Wide-Band Transmission-Reflection Spectroscopy .....	324
9.7 Losses of Photonic Crystal Integrated Optical Devices.....	324
9.7.1 Analysis of Losses in Planar Photonic Crystal Waveguides .....	324
9.7.2 Measurement of Propagation Losses in Straight Photonic Crystal Channel Waveguides .....	326
9.7.3. Losses in the Slow-Light Regime.....	329
9.7.4 Waveguide Bends in Photonic Crystals and Bend Losses.....	329
9.7.5 Photonic Crystal Resonators and Quality Factors.....	330
9.8 Photonic Crystal Devices and Functions : Recent Developments.....	333
9.8.1 Classification of devices.....	333
9.8.2 Coupled Resonators and Waveguides.....	335
9.8.3 Very high-Q cavities.....	337
9.8.4 Other Devices and Optical Functions .....	339
<b>10 Microsources.....</b>	<b>345</b>
10.1 High-Efficiency Light-Emitting Diodes.....	345
10.1.1 Solutions for the Extraction of Light without Confinement .....	345
10.1.2. Enhanced Extraction Efficiency through Planar Confinement.....	347
10.1.3 Increase of the Extraction Efficiency using Two-Dimensional Photonic Crystals .....	350
10.2 Ridge-Type Waveguide Lasers confined by Photonics Crystals .....	352
10.3 Bulk Photonic Crystal Band Edge Lasers .....	355
10.4 Photonic crystal VCSELs.....	358
10.5 Microcavity Lasers.....	360
10.6 Potential Interest of Single-Photon Sources.....	364
<b>11 Photonic Crystal Fibres.....</b>	<b>371</b>
11.1 Another Implementation of Periodic Structures .....	371
11.2 Fabrication of Microstructured Optical Fibres.....	372
11.3 Solid-Core Microstructured Optical Fibres.....	375
11.3.1 Confinement Losses and Second Mode Transition.....	375
11.3.2 Attenuation and Bend Loss.....	378
11.3.3 Chromatic Dispersion Properties .....	378
11.3.4 Main Applications of Solid-Core Microstructured Optical Fibres...	380
11.4 True Photonic Crystal Fibres (PCF) .....	382
11.4.1 Photonic Bandgap Cladding.....	382
11.4.2 Losses of Photonic Crystal Fibres with Finite Cladding.....	385
11.4.3 Photonic Crystal Fibres with Optimised Structures .....	387
11.4.4 Main Applications of Photonic Crystal Fibres .....	389
<b>12 Three-Dimensional Structures in Optics.....</b>	<b>393</b>
12.1 Geometrical Configurations proposed for Three-Dimensional Structures .....	394
12.1.1 Structures with Omnidirectional Photonic Band Gaps .....	394
12.1.2 Incomplete Band Gap Three-Dimensional Structures .....	397

12.2 Examples of Fabrication Processes and Realizations of Three-Dimensional Photonic Crystals in the Optical Region .....	399
12.2.1 Complete Band Gap Structures.....	399
12.3 Metallic Three-Dimensional Photonic Crystals in the Optical Region.....	410
12.4 Three-Dimensional Photonic Crystals and Light Emitters.....	412
<b>13 Microwave and Terahertz Antennas and Circuits .....</b>	<b>413</b>
13.1 Photonic Crystal Antennas .....	414
13.1.1 Photonic-Crystal Antenna Substrates .....	415
13.1.2 Photonic-Crystal Antenna Mirrors .....	418
13.1.3 Photonic Crystal Antenna Radomes or Superstrates.....	422
13.2 Controllable Structures and Metamaterials.....	424
13.2.1 Principles and Characteristics of Electrically Controllable Photonic Crystals.....	424
13.2.2 Electrically Controllable Photonic Crystal Antennas .....	426
13.2.3 Antennas and Metamaterials.....	429
13.3 Microwave Circuits and Ultra-Compact Photonic Crystals .....	430
13.3.1 Ultra-Compact Photonic Crystals.....	430
13.3.2 Microwave Filters and Waveguides realised from Ultra-Compact Photonic Crystals.....	433
13.4 From Microwaves to Terahertz Waves .....	435
13.5 From Microwaves to Optics .....	436
13.5.1 Impedance Matching of Photonic Waveguides.....	437
13.5.2 Photonic Crystal THz Imaging System .....	439
13.5.3 'Microwave Inspired' Nanostructures and Nanodevices .....	440
<b>Conclusion and Perspectives.....</b>	<b>443</b>
<b>Appendices .....</b>	<b>447</b>
<b>Appendix A. Scattering Matrix Method: Determination of the Field for a Finite Two-Dimensional Crystal formed by Dielectric Rods .....</b>	<b>449</b>
A.1 Incident Field.....	449
A.2 Field inside the Rods.....	449
A.3 Field in the Vicinity of a Rod .....	452
<b>Appendix B. Magneto-Photonic Crystals.....</b>	<b>459</b>
<b>Appendix C. Stigmatism of a Slab of Perfect Left-Handed Material: Integral for the Total Field. ....</b>	<b>463</b>
<b>References .....</b>	<b>467</b>
