# Contents

<b>1</b>	<b>Elements of Tensor Algebra and Analysis</b> . . . . .	1
1.1	Notations . . . . .	1
1.2	Finite-Dimensional Vector Spaces . . . . .	2
1.3	Linear Complementarity . . . . .	6
1.4	Vectors and Second-Order Tensors . . . . .	7
1.5	Gradient and Divergence . . . . .	13
1.6	Higher-Order Tensors . . . . .	14
1.7	Derivatives of Eigenvalues and Eigenvectors . . . . .	15
<b>2</b>	<b>The Constitutive Equations of Masonry-Like Materials</b> . . . .	19
2.1	Masonry-Like Materials with Zero Tensile Strength and Infinite Compressive Strength . . . . .	19
2.1.1	Isotropic Materials . . . . .	25
2.1.2	The Two-Dimensional Case . . . . .	30
2.2	Masonry-Like Materials with Small Tensile Strength and Bounded Compressive Strength . . . . .	34
2.3	Masonry-Like Materials Under Non-Isothermal Conditions . . . .	42
2.4	The Derivative of the Stress Function . . . . .	45
<b>3</b>	<b>Equilibrium of Masonry Bodies</b> . . . . .	51
3.1	The Equilibrium Problem . . . . .	51
3.2	Variational Principles . . . . .	53
<b>4</b>	<b>The Numerical Method</b> . . . . .	59
4.1	Algorithm for Solution of the Equilibrium Problem . . . . .	59
4.2	Fracture Strain Tensor and Cracked Regions . . . . .	63
4.3	The Finite Element Code COMES-NOSA . . . . .	66
<b>5</b>	<b>Masonry Arches, Vaults and Domes</b> . . . . .	67
5.1	Shells and Masonry Vaults . . . . .	67
5.2	The Maximum Modulus Eccentricity Surface . . . . .	68
5.3	The Limit Analysis of Masonry Arches and Vaults . . . . .	71

<b>6</b>	<b>Comparison Between Explicit and Numerical Solutions . . . .</b>	<b>75</b>
6.1	The Circular Ring . . . . .	76
6.2	The Spherical Container . . . . .	79
6.3	The Trapezoidal Panel . . . . .	82
6.4	The Mosca Bridge in Turin . . . . .	89
6.5	The Circular Arch . . . . .	92
6.6	The Circular Plate . . . . .	95
6.7	The Spherical Dome . . . . .	98
<b>7</b>	<b>Applications . . . . .</b>	<b>103</b>
7.1	The Medici Arsenal in Pisa . . . . .	103
7.2	The Church of San Pietro in Vinculis in Pisa . . . . .	110
7.3	The Dome of the Church of S. Maria Maddalena in Morano Calabro . . . . .	113
7.4	The Ladle . . . . .	119
7.4.1	Analysis at the End of Stage CT2 . . . . .	126
7.4.2	Analysis at the End of Stage CT4 . . . . .	127
<b>A</b>	<b>The Constitutive Equation of Masonry-Like Materials: the Two-Dimensional Case . . . . .</b>	<b>131</b>
A.1	Masonry-Like Materials with Small Tensile Strength and Bounded Compressive Strength . . . . .	131
A.1.1	Plane Strain State . . . . .	131
A.1.2	Plane Stress State . . . . .	134
A.2	Masonry-Like Materials under Non-Isothermal Conditions . . . .	136
A.3	The Derivative of the Stress . . . . .	137
<b>B</b>	<b>Algorithm for the Solution of the Equilibrium Problem: Non-Isothermal Case . . . . .</b>	<b>141</b>
<b>C</b>	<b>Flow-Chart and Element Library of COMES-NOSA . . . . .</b>	<b>145</b>
<b>D</b>	<b>The GiD2Nosa Interface . . . . .</b>	<b>149</b>
	<b>References . . . . .</b>	<b>155</b>
	<b>Index . . . . .</b>	<b>161</b>

Masonry Constructions: Mechanical Models and  
Numerical Applications

Lucchesi, M.; Padovani, C.; Pasquinelli, G.; Zani, N.

2008, XII, 164 p., Hardcover

ISBN: 978-3-540-79110-2
