Foreword	iii
Preface	v
1 Introduction	1
1.1 Revision process	1
1.2 Scope of revision	1
1.3 Overview of changes	3
1.3.1 The object oriented model	5
1.3.2 Access types	9
1.3.3 Structure, visibility, and limited types	13
1.3.4 Tasking and real-time facilities	18
1.3.5 Exceptions, numerics, generics etc.	21
1.3.6 Standard library	25
1.4 Conclusions	29
2 Object Oriented Model	31
2.1 Overview of changes	31
2.2 Reserved words	32
2.3 The prefixed notation	33
2.4 Interfaces	39
2.5 Nested type extension	49
2.6 Object factory functions	52
2.7 Overriding and overloading	58
3 Access Types	65
3.1 Overview of changes	65
3.2 Null exclusion and constant	66
3.3 Anonymous access types	71
3.4 Downward closures	82
3.5 Access types and discriminants	88
4 Structure and Visibility	93
4.1 Overview of changes	93
4.2 Mutually dependent types	94
4.3 Visibility from private parts	102
4.4 Aggregates	107
4.5 Limited types and return statements	109

5	Tasking and Real-Time	119
5.1	Overview of changes	119
5.2	Task termination	120
5.3	Synchronized interfaces	123
5.4	The Ravenscar profile	132
5.5	Scheduling and dispatching	134
5.6	CPU clocks and timers	139
5.7	High Integrity Systems annex	148
6	Exceptions, Generics etc.	149
6.1	Overview of changes	149
6.2	Exceptions	150
6.3	Numerics	152
6.4	Pragmas and Restrictions	157
6.5	Generic units	166
7	Predefined Library	177
7.1	Overview of changes	177
7.2	The container library	178
7.3	Times and dates	178
7.4	Operational environment	185
7.5	Characters and strings	191
7.6	Numerics annex	195
7.7	Categorization of library units	199
7.8	Streams	203
8	Containers	205
8.1	Organization of containers	205
8.2	Lists and vectors	206
8.3	Maps	214
8.4	Sets	223
8.5	Indefinite containers	232
8.6	Sorting	237
8.7	Summary table	237
9	Epilogue	243
9.1	Compatibility	243
	9.1.1 Incompatibilities with Ada 95	243
	9.1.2 Inconsistencies with Ada 95	249
9.2	Retrospective changes to Ada 95	250
	9.2.1 Incompatibilities with original Ada 95	251
	9.2.2 Inconsistencies with original Ada 95	253
9.3	Unfinished topics	254
	9.3.1 Aggregates for private types	254

9.3.2	Partial generic instantiation	255
9.3.3	Support for IEEE 559: 1989	256
9.3.4	Defaults for generic parameters	256
9.3.5	Pre/post conditions for subprograms	256
9.3.6	Type and package invariants	256
9.3.7	Exceptions as types	257
9.3.8	Sockets operations	257
9.3.9	In out parameters for functions	257
9.3.10	Application defined scheduling	257
9.4	Postscript	257
