<b>Preface</b> . . . . .	vii
<b>1 Preliminaries</b>	
1.1 Banach space-valued measures . . . . .	1
1.2 lcHs-valued measures . . . . .	11
<b>2 Basic Properties of the Bartle-Dunford-Schwartz Integral</b>	
2.1 (KL) $\mathbf{m}$ -integrability . . . . .	17
2.2 (BDS) $\mathbf{m}$ -integrability . . . . .	26
<b>3 <math>\mathcal{L}_p</math>-spaces, <math>1 \leq p \leq \infty</math></b>	
3.1 The seminorms $\mathbf{m}_p^\bullet(\cdot, T)$ on $\mathcal{L}_p\mathcal{M}(\mathbf{m})$ , $1 \leq p < \infty$ . . . . .	33
3.2 Completeness of $\mathcal{L}_p\mathcal{M}(\mathbf{m})$ and $\mathcal{L}_p\mathcal{I}(\mathbf{m})$ , $1 \leq p < \infty$ , and of $\mathcal{L}_\infty(\mathbf{m})$ . . . . .	42
3.3 Characterizations of $\mathcal{L}_p\mathcal{I}(\mathbf{m})$ , $1 \leq p < \infty$ . . . . .	47
3.4 Other convergence theorems for $\mathcal{L}_p(\mathbf{m})$ , $1 \leq p < \infty$ . . . . .	54
3.5 Relations between the spaces $\mathcal{L}_p(\mathbf{m})$ . . . . .	63
<b>4 Integration With Respect to lcHs-valued Measures</b>	
4.1 (KL) $\mathbf{m}$ -integrability ( $\mathbf{m}$ lcHs-valued) . . . . .	65
4.2 (BDS) $\mathbf{m}$ -integrability ( $\mathbf{m}$ lcHs-valued) . . . . .	78
4.3 The locally convex spaces $\mathcal{L}_p\mathcal{M}(\mathbf{m})$ , $\mathcal{L}_p\mathcal{M}(\sigma(\mathcal{P}), \mathbf{m})$ , $\mathcal{L}_p\mathcal{I}(\mathbf{m})$ and $\mathcal{L}_p\mathcal{I}(\sigma(\mathcal{P}), \mathbf{m})$ , $1 \leq p < \infty$ . . . . .	85
4.4 Completeness of $\mathcal{L}_p\mathcal{M}(\mathbf{m})$ , $\mathcal{L}_p\mathcal{I}(\mathbf{m})$ , $\mathcal{L}_p\mathcal{M}(\sigma(\mathcal{P}), \mathbf{m})$ and $\mathcal{L}_p\mathcal{I}(\sigma(\mathcal{P}), \mathbf{m})$ , for suitable $X$ . . . . .	91
4.5 Characterizations of $\mathcal{L}_p$ -spaces, convergence theorems and relations between $\mathcal{L}_p$ -spaces . . . . .	101
4.6 Separability of $\mathcal{L}_p(\mathbf{m})$ and $\mathcal{L}_p(\sigma(\mathcal{P}), \mathbf{m})$ , $1 \leq p < \infty$ , $\mathbf{m}$ lcHs-valued . . . . .	109

<b>5</b>	<b>Applications to Integration in Locally Compact Hausdorff Spaces – Part I</b>	
5.1	Generalizations of the Vitali-Carathéodory Integrability Criterion Theorem . . . . .	117
5.2	The Baire version of the Dieudonné-Grothendieck theorem and its vector-valued generalizations . . . . .	121
5.3	Weakly compact bounded Radon operators and prolongable Radon operators . . . . .	138
<b>6</b>	<b>Applications to Integration in Locally Compact Hausdorff Spaces – Part II</b>	
6.1	Generalized Lusin's Theorem and its variants . . . . .	153
6.2	Lusin measurability of functions and sets . . . . .	159
6.3	Theorems of integrability criteria . . . . .	165
6.4	Additional convergence theorems . . . . .	187
6.5	Duals of $\mathcal{L}_1(\mathbf{m})$ and $\mathcal{L}_1(\mathbf{n})$ . . . . .	202
<b>7</b>	<b>Complements to the Thomas Theory</b>	
7.1	Integration of complex functions with respect to a Radon operator . . . . .	213
7.2	Integration with respect to a weakly compact bounded Radon operator . . . . .	221
7.3	Integration with respect to a prolongable Radon operator . . . . .	233
7.4	Baire versions of Proposition 4.8 and Theorem 4.9 of [T] . . . . .	241
7.5	Weakly compact and prolongable Radon vector measures . . . . .	251
7.6	Relation between $\mathcal{L}_p(u)$ and $\mathcal{L}_p(\mathbf{m}_u)$ , $u$ a weakly compact bounded Radon operator or a prolongable Radon operator . . . . .	275
	<b>Bibliography</b> . . . . .	287
	<b>Acknowledgment</b> . . . . .	293
	<b>List of Symbols</b> . . . . .	295
	<b>Index</b> . . . . .	297

The Bartle-Dunford-Schwartz Integral  
Integration with Respect to a Sigma-Additive Vector  
Measure

Panchapagesan, T.V.

2008, XV, 304 p., Hardcover

ISBN: 978-3-7643-8601-6

A product of Birkhäuser Basel
