<b>Preface</b>	xi
Applying Exponential Dichotomy	xi
Purpose, Limitations, and Readership	xiv
Acknowledgments	xv
<b>1 Exponentially Dichotomous Operators and Bisemigroups</b>	
1.1 Standard notation and semigroups	1
1.2 Exponentially dichotomous operators	5
1.3 Characterizing exponential dichotomy	7
1.4 Classes of exponential dichotomy	15
1.4.1 Analytic bisemigroups	16
1.4.2 Immediately norm continuous bisemigroups	20
1.4.3 Immediately compact bisemigroups	21
1.4.4 Hyperbolic semigroups	21
1.5 Adjoint and sun dual bisemigroups	24
<b>2 Perturbing Exponentially Dichotomous Operators</b>	
2.1 Invertibility in Banach algebras	28
2.1.1 Commutative Banach algebras	28
2.1.2 Noncommutative Banach algebras	29
2.2 Additive perturbations: Elementary results	33
2.2.1 Additive compact perturbations	34
2.2.2 Additive perturbations: Analytic bisemigroups	35
2.2.3 Additive perturbations: Immediate norm continuity	36
2.2.4 Compact perturbations: Immediate compactness	36
2.3 Additive perturbations: Generalizations	37
2.3.1 Applying tensor products	37
2.3.2 Bochner vs. Pettis integration	38
2.3.3 Bounded additive perturbations	41

<b>3</b>	<b>Abstract Cauchy Problems</b>	
3.1	The abstract Cauchy problem . . . . .	47
3.1.1	Involving semigroup generators . . . . .	47
3.1.2	Involving exponentially dichotomous operators . . . . .	48
3.1.3	Involving analytic bisemigroups . . . . .	53
3.2	Characterizing exponential dichotomy . . . . .	54
<b>4</b>	<b>Riccati Equations and Wiener-Hopf Factorization</b>	
4.1	Canonical factorization and perturbation . . . . .	61
4.1.1	Canonical factorization . . . . .	62
4.1.2	When perturbations lead to Bochner integrable kernels . . . . .	64
4.1.3	When perturbations lead to Pettis integrable kernels . . . . .	70
4.2	Block operators and Riccati equations . . . . .	73
4.2.1	Riccati equations in complex Banach spaces . . . . .	74
4.2.2	Riccati equations in complex Hilbert spaces . . . . .	79
4.3	Approximating solutions of Riccati equations . . . . .	81
<b>5</b>	<b>Transport Equations</b>	
5.1	Introduction . . . . .	89
5.2	Exponential dichotomy in transport theory . . . . .	93
5.2.1	Preliminary results . . . . .	94
5.2.2	Positive selfadjoint collision operators . . . . .	97
5.2.3	Identity plus compact collision operator . . . . .	98
5.3	Solving the boundary value problems . . . . .	101
5.3.1	Boundary value problems on a finite interval . . . . .	101
5.3.2	Boundary value problems on the half-line . . . . .	102
5.4	Avoiding compactness assumptions . . . . .	104
5.4.1	Bounded collision operators with closed range . . . . .	105
5.4.2	Unbounded collision operators with closed range . . . . .	108
5.4.2.a	General results . . . . .	109
5.4.2.b	Equivalence of the norms . . . . .	111
<b>6</b>	<b>Indefinite Sturm-Liouville Problems</b>	
6.1	Introduction . . . . .	115
6.2	Applying positive operators on Krein spaces . . . . .	118
6.2.1	Positive operators on Krein spaces . . . . .	118
6.2.2	Applications . . . . .	121
6.3	Sturm-Liouville operators of second order . . . . .	125
6.3.1	Positive weight functions . . . . .	126
6.3.2	Indefinite weight functions . . . . .	128

6.4	Sturm-Liouville operators of any order . . . . .	133
6.4.1	Positive weight functions . . . . .	134
6.4.2	Indefinite weight functions . . . . .	136
<b>7</b>	<b>Noncausal Continuous Time Systems</b>	
7.1	Noncausal state linear systems . . . . .	140
7.1.1	Definitions, basic results, and adjoints . . . . .	140
7.1.2	Generating noncausal state linear systems . . . . .	142
7.2	Extended Pritchard-Salamon realizations . . . . .	148
7.2.1	Definitions and basic properties . . . . .	148
7.2.2	Duality of extended PS-realizations . . . . .	160
7.2.3	Generating extended PS-realizations . . . . .	163
7.2.4	Factorizing extended PS-realizations . . . . .	170
7.2.5	Solving the realization problem . . . . .	179
<b>8</b>	<b>Mixed-type Functional Differential Equations</b>	
8.1	The Green's function matrix . . . . .	191
8.2	Elementary spectral analysis . . . . .	193
8.3	Exponential dichotomy . . . . .	198
8.3.1	Decomposing the underlying Banach space . . . . .	199
8.3.2	Taking the inverse Laplace transform of the resolvent . . . . .	204
8.4	Delay equations and hyperbolic semigroups . . . . .	206
	<b>Bibliography</b> . . . . .	209
	<b>Index</b> . . . . .	221
