

# Contents

1	Introduction . . . . .	1
<b>1</b>	<b>Weyl Calculus and Arithmetic</b>	
2	A non-arithmetic prologue . . . . .	7
3	A family of arithmetic coherent states for the metaplectic representation . . . . .	13
4	Wigner functions of pairs of arithmetic coherent states . . . . .	24
5	Matrix elements of operators from the Weyl calculus against arithmetic coherent states . . . . .	35
<b>2</b>	<b>Quantization</b>	
6	Discrete series of $SL(2, \mathbb{R})$ and the hyperbolic half-plane as a phase space . . . . .	51
7	Reinstalling $\mathbb{R}^2$ as a phase space: the horocyclic calculus . . . . .	58
<b>3</b>	<b>Quantization and Modular Forms</b>	
8	An extension of the Rankin-Selberg unfolding method . . . . .	72
9	Discrete series and arithmetic coherent states . . . . .	81
10	Radial horocyclic calculus and arithmetic . . . . .	91
11	Beyond the radial case: automorphic distributions . . . . .	102
<b>4</b>	<b>Back to the Weyl Calculus</b>	
12	Letting $N$ go to infinity . . . . .	117
13	Spaces of combs and Dirichlet series . . . . .	130
	<b>Index</b> . . . . .	143
	<b>Bibliography</b> . . . . .	145
