Preface v

1 Biology, Mathematics, and a Mathematical Biology Laboratory 1

 1.1 The Natural Linkage Between Mathematics and Biology..... 1

 1.2 The Use of Models in Biology 2

 1.3 What Can Be Derived from a Model and How Is It Analyzed? 5

 References 8

2 Some Mathematical Tools 9

 2.1 Linear Dependence 10

 Exercises 15

 2.2 Linear Regression, the Method of Least Squares 17

 Exercises 25

 2.3 Multiple Regression 28

 Exercises 34

 2.4 Modeling with Differential Equations 36

 Exercises 45

 2.5 Modeling with Difference Equations 48

 2.6 Matrix Analysis 52

 Exercises 56

 2.7 Statistical Data 58

 Exercises 66

 2.8 Probability 70

 Exercises 78

 References and Suggested Further Reading 81

Part I: Cells, Signals, Growth, and Populations

3 Reproduction and the Drive for Survival 85

 3.1 The Darwinian Model of Evolution 86

 3.2 Cells 89

3.3	Replication of Living Systems	90
3.4	Population Growth and Its Limitations	93
3.5	The Exponential Model for Growth and Decay	95
	Exercises/Experiments	104
	Questions for Thought and Discussion	105
	References and Suggested Further Reading	105
4	Interactions Between Organisms and Their Environment	107
4.1	How Population Growth Is Controlled	107
4.2	Community Ecology	117
4.3	Environmentally Limited Population Growth	118
	Exercises/Experiments	125
4.4	A Brief Look at Multiple Species Systems	128
	Exercises/Experiments	135
	Questions for Thought and Discussion	139
	References and Suggested Further Reading	139
5	Age-Dependent Population Structures	141
5.1	Aging and Death	141
5.2	The Age Structure of Populations	146
5.3	Predicting the Age Structure of a Population	150
	Exercises/Experiments	159
	Questions for Thought and Discussion	160
	References and Suggested Further Reading	161
6	Random Movements in Space and Time	163
6.1	Biological Membranes	164
6.2	The Mathematics of Diffusion	168
	Exercises/Experiments	185
6.3	Transplacental Transfer of Oxygen: Biological and Biochemical Considerations	187
6.4	Oxygen Diffusion Across the Placenta: Physical Considerations . . .	189
	Exercises/Experiments	197
	Questions for Thought and Discussion	197
	References and Suggested Further Reading	198
7	Neurophysiology	201
7.1	Communication Between Parts of an Organism	201
7.2	The Neuron	203
7.3	The Action Potential	206
7.4	Synapses: Interneuronal Connections	210
7.5	A Model for the Conduction of Action Potentials	214
7.6	Fitzhugh–Nagumo Two-Variable Action Potential System	223
	Exercises/Experiments	226
	Questions for Thought and Discussion	227
	References and Suggested Further Reading	227

8	The Biochemistry of Cells	229
8.1	Atoms and Bonds in Biochemistry	229
8.2	Biopolymers	237
8.3	Molecular Information Transfer	252
8.4	Enzymes and Their Function	259
8.5	Rates of Chemical Reactions	266
	Exercises/Experiments	270
8.6	Enzyme Kinetics	271
	Exercises/Experiments	276
	Questions for Thought and Discussion	279
	References and Suggested Further Reading	280

Part II: Systems and Diseases

9	The Biological Disposition of Drugs and Inorganic Toxins	283
9.1	The Biological Importance of Lead	283
9.2	Early Embryogenesis and Organ Formation	284
9.3	Gas Exchange	290
9.4	The Digestive System	292
9.5	The Skin	294
9.6	The Circulatory System	295
9.7	Bones	304
9.8	The Kidneys	305
9.9	Clinical Effects of Lead	307
9.10	A Mathematical Model for Lead in Mammals	308
	Exercises/Experiments	312
9.11	Pharmacokinetics	313
	Exercises/Experiments	320
	Questions for Thought and Discussion	320
	References and Suggested Further Reading	320
10	A Biomathematical Approach to HIV and AIDS	323
10.1	Viruses	323
10.2	The Immune System	328
10.3	HIV and AIDS	337
10.4	An HIV Infection Model	343
	Exercises/Experiments	350
10.5	A Model for a Mutating Virus	351
10.6	Predicting the Onset of AIDS	358
	Exercises/Experiments	366
	Questions for Thought and Discussion	368
	References and Suggested Further Reading	369

11	Parasites and Their Diseases	371
11.1	Protozoan Parasites Cause Important Human Diseases	371
11.2	The Life Cycle of the Malaria Parasite	376
11.3	Host–Parasite Interactions	378
11.4	Mathematical Models for Parasitic Diseases	382
	Exercises/Experiments	394
	Questions for Thought and Discussion	397
	References and Suggested Further Reading	397
12	Cancer: A Disease of the DNA	399
12.1	Cell Growth and Division Is an Involved and Complicated Process	399
12.2	Types and Stages of Cancer	402
12.3	The Role of Proto-Oncogenes and Tumor Suppressor Genes	402
12.4	A Model for Retinoblastoma	405
12.5	Application to the Retinoblastoma Data	412
12.6	Persistence of Germinal Cases	414
	Exercises/Experiments	415
	Questions for Thought and Discussion	416
	References and Suggested Further Reading	416

Part III: Genomics

13	Genetics	419
13.1	Asexual Cell Reproduction: Mitosis	419
13.2	Sexual Reproduction: Meiosis and Fertilization	425
13.3	Classical Genetics	429
13.4	Genetic Drift	438
13.5	A Final Look at Darwinian Evolution	440
13.6	The Hardy–Weinberg Principle	442
13.7	The Fixation of a Beneficial Mutation	448
	Exercises/Experiments	453
	Questions for Thought and Discussion	459
	References and Suggested Further Reading	459
14	Genomics	461
14.1	The Promise of Genomics	461
14.2	Structural Genomics	463
14.3	Comparative Genomics	465
14.4	Genomics in Medicine	467
14.5	Protein Substitution Matrices	471
14.6	BLAST for Protein and DNA Search	475
14.7	The Mathematical Underpinnings of BLAST	484
	Exercises/Experiments	494
	Questions for Thought and Discussion	495
	References and Suggested Further Reading	495

15	Phylogenetics	497
15.1	Phylogeny	498
15.2	Branch Lengths Estimate the Separation of Species	508
15.3	Introduction to Algebraic Statistics	514
15.4	Algebraic Analysis of Maximum Likelihood	520
15.5	Characterizing Trees by Their Variety, Phylogenetic Invariants	527
15.6	Constructing the Phylogenetic Tree	530
	Exercises/Experiments	535
	Questions for Thought and Discussion	537
	References and Suggested Further Reading	537
	Code Index	539
	Index	541

Mathematical Biology

An Introduction with Maple and Matlab

Shonkwiler, R.W.; Herod, J.

2009, XIII, 551 p., Hardcover

ISBN: 978-0-387-70983-3
