Preface	vi
List of Tables	xiii
List of Figures	xv
1 Review of differential calculus	1
1.1 Limits and continuity	1
1.2 Derivatives	3
1.3 Integrals	7
1.3.1 Particular integration techniques	9
1.3.2 Double integrals	12
1.4 Infinite series	14
1.4.1 Geometric series	15
1.5 Exercises for Chapter 1	18
2 Elementary probability	27
2.1 Random experiments	27
2.2 Events	28
2.3 Probability	29
2.4 Conditional probability	32
2.5 Total probability	35
2.6 Combinatorial analysis	36
2.7 Exercises for Chapter 2	39
3 Random variables	55
3.1 Introduction	55
3.1.1 Discrete case	55
3.1.2 Continuous case	57
3.2 Important discrete random variables	61
3.2.1 Binomial distribution	61
3.2.2 Geometric and negative binomial distributions	64
3.2.3 Hypergeometric distribution	66
3.2.4 Poisson distribution and process	68
3.3 Important continuous random variables	70

3.3.1	Normal distribution	70
3.3.2	Gamma distribution	74
3.3.3	Weibull distribution	77
3.3.4	Beta distribution	78
3.3.5	Lognormal distribution	80
3.4	Functions of random variables	81
3.4.1	Discrete case	81
3.4.2	Continuous case	82
3.5	Characteristics of random variables	83
3.6	Exercises for Chapter 3	94
4	Random vectors	115
4.1	Discrete random vectors	115
4.2	Continuous random vectors	118
4.3	Functions of random vectors	124
4.3.1	Discrete case	125
4.3.2	Continuous case	127
4.3.3	Convolutions	128
4.4	Covariance and correlation coefficient	131
4.5	Limit theorems	135
4.6	Exercises for Chapter 4	137
5	Reliability	161
5.1	Basic notions	161
5.2	Reliability of systems	170
5.2.1	Systems in series	170
5.2.2	Systems in parallel	172
5.2.3	Other cases	176
5.3	Paths and cuts	178
5.4	Exercises for Chapter 5	183
6	Queueing	191
6.1	Continuous-time Markov chains	191
6.2	Queueing systems with a single server	197
6.2.1	The $M/M/1$ model	199
6.2.2	The $M/M/1$ model with finite capacity	207
6.3	Queueing systems with two or more servers	212
6.3.1	The $M/M/s$ model	212
6.3.2	The $M/M/s/c$ model	218
6.4	Exercises for Chapter 6	220

7	Time series	227
7.1	Introduction	227
7.2	Particular time series models	235
7.2.1	Autoregressive processes	235
7.2.2	Moving average processes	244
7.2.3	Autoregressive moving average processes	249
7.3	Modeling and forecasting	251
7.4	Exercises for Chapter 7	261
A	List of symbols and abbreviations	269
B	Statistical tables	275
C	Solutions to “Solved exercises”	281
D	Answers to even-numbered exercises	325
E	Answers to multiple choice questions	333
	References	335
	Index	337

Basic Probability Theory with Applications

Lefebvre, M.

2009, XVI, 340 p. 50 illus., Hardcover

ISBN: 978-0-387-74994-5
