Part I Cones, monoids, and triangulations

1	Polytopes, cones, and complexes	3
1.A	Polyhedra and their faces	3
1.B	Finite generation of cones	10
1.C	Finite generation of polyhedra	15
1.D	Polyhedral complexes	21
1.E	Subdivisions and triangulations	25
1.F	Regular subdivisions	31
1.G	Rationality and integrality	39
	Exercises	44
	Notes	47
2	Affine monoids and their Hilbert bases	49
2.A	Affine monoids	49
2.B	Normal affine monoids	58
2.C	Generating normal affine monoids	67
2.D	Normality and unimodular covering	77
	Exercises	85
	Notes	88
3	Multiples of lattice polytopes	91
3.A	Knudsen–Mumford triangulations	91
3.B	Unimodular triangulations of multiples of polytopes	97
3.C	Unimodular covers of multiples of polytopes	103
	Exercises	117
	Notes	119

Part II Affine monoid algebras

4	Monoid algebras	123
4.A	Graded rings	123
4.B	Monoid algebras	129
4.C	Representations of monoid algebras	133
4.D	Monomial prime and radical ideals	137
4.E	Normality	140
4.F	Divisorial ideals and the class group	145
4.G	The Picard group and seminormality	153
	Exercises	160
	Notes	162
5	Isomorphisms and automorphisms	165
5.A	Linear algebraic groups	165
5.B	Invariants of diagonalizable groups	172
5.C	The isomorphism theorem	175
5.D	Automorphisms	183
	Exercises	195
	Notes	198
6	Homological properties and Hilbert functions	199
6.A	Cohen–Macaulay rings	199
6.B	Graded homological algebra	206
6.C	The canonical module	213
6.D	Hilbert functions	218
6.E	Applications to enumerative combinatorics	227
6.F	Divisorial linear algebra	237
	Exercises	246
	Notes	248
7	Gröbner bases, triangulations, and Koszul algebras	251
7.A	Gröbner bases and initial ideals	251
7.B	Initial ideals of toric ideals	256
7.C	Toric ideals and triangulations	267
7.D	Multiples of lattice polytopes	276
	Exercises	281
	Notes	282

Part III K-theory

8	Projective modules over monoid rings	287
8.A	Projective modules	287
8.B	The main theorem and the plan of the proof	289
8.C	Projective modules over polynomial rings	292
8.D	Reduction to the interior	297
8.E	Graded “Weierstrass preparation”	298
8.F	Pyramidal descent	299
8.G	How to shrink a polytope	305
8.H	Converse results	307
8.I	Generalizations	309
	Exercises	321
	Notes	324
9	Bass–Whitehead groups of monoid rings	327
9.A	The functors K_1 and K_2	327
9.B	The nontriviality of $SK_1(R[M])$	333
9.C	Further results: a survey	345
	Exercises	351
	Notes	353
10	Varieties	355
10.A	Vector bundles, coherent sheaves, and Grothendieck groups	356
10.B	Toric varieties	364
10.C	Chow groups of toric varieties	375
10.D	Intersection theory	380
10.E	Chow cohomology of toric varieties	393
10.F	Toric varieties with huge Grothendieck group	404
10.G	The equivariant Serre problem for abelian groups	413
	Exercises	425
	References	429
	Notation	445
	Index	451
