<b>Series Preface</b> .....	ix
<b>Preface</b> .....	xi
<b>1 Smooth and Nonsmooth Calculus</b> .....	1
1.1 Gâteaux and Fréchet Derivatives .....	2
1.2 Convex Functions .....	12
1.3 Locally Lipschitz Functions .....	27
1.4 Variational Geometry .....	35
1.5 $\Gamma$ -Convergence .....	45
1.6 Remarks .....	60
<b>2 Extremal Problems and Optimal Control</b> .....	63
2.1 Lower Semicontinuity .....	64
2.2 Constrained Minimization Problems .....	72
2.3 Saddle Points and Duality .....	79
2.4 Variational Principles .....	89
2.5 Calculus of Variations .....	98
2.6 Optimal Control .....	111
2.7 Remarks .....	144
<b>3 Nonlinear Operators and Fixed Points</b> .....	147
3.1 Compact and Fredholm Operators .....	148
3.2 Monotone and Accretive Operators .....	162
3.3 Degree Theory .....	196
3.4 Metric Fixed Points .....	224
3.5 Topological Fixed Points .....	237
3.6 Order and Fixed Points .....	245
3.7 Remarks .....	263

<b>4</b>	<b>Critical Point Theory and Variational Methods</b> . . . . .	267
4.1	Critical Point Theory . . . . .	268
4.2	Ljusternik–Schnirelmann Theory . . . . .	289
4.3	Spectrum of the Laplacian and of the $p$ -Laplacian . . . . .	297
4.4	Abstract Eigenvalue Problems . . . . .	334
4.5	Bifurcation Theory . . . . .	340
4.6	Remarks . . . . .	349
<b>5</b>	<b>Boundary Value Problems–Hamiltonian Systems</b> . . . . .	351
5.1	Variational Method . . . . .	352
5.2	Method of Upper–Lower Solutions . . . . .	380
5.3	Degree-Theoretic Methods . . . . .	404
5.4	Nonlinear Eigenvalue Problems . . . . .	421
5.5	Maximum and Comparison Principles . . . . .	432
5.6	Periodic Solutions for Hamiltonian Systems . . . . .	440
5.7	Remarks . . . . .	450
<b>6</b>	<b>Multivalued Analysis</b> . . . . .	455
6.1	Continuity of Multifunctions . . . . .	456
6.2	Measurability of Multifunctions . . . . .	470
6.3	Continuous and Measurable Selectors . . . . .	475
6.4	Decomposable Sets and Set-Valued Integration . . . . .	487
6.5	Fixed Points and Carathéodory Multifunctions . . . . .	504
6.6	Convergence of Sets . . . . .	514
6.7	Remarks . . . . .	524
<b>7</b>	<b>Economic Equilibrium and Optimal Economic Planning</b> . . .	529
7.1	Perfectly Competitive Economies: Core and Walras Equilibria	530
7.2	Infinite Horizon Multisector Growth Models . . . . .	542
7.3	Turnpike Theorems . . . . .	558
7.4	Stochastic Growth Models . . . . .	567
7.5	Continuous-Time Growth Models . . . . .	589
7.6	Expected Utility Hypothesis . . . . .	599
7.7	Remarks . . . . .	606
<b>8</b>	<b>Game Theory</b> . . . . .	609
8.1	Noncooperative Games–Nash Equilibrium . . . . .	610
8.2	Cooperative Games . . . . .	617
8.3	Cournot–Nash Equilibria for Random Games . . . . .	624
8.4	Bayesian Games . . . . .	628
8.5	Stochastic Games . . . . .	632
8.6	Approximate Equilibria . . . . .	644
8.7	Remarks . . . . .	649

<b>9</b>	<b>Uncertainty, Information, Decision Making</b> .....	651
9.1	Mathematical Space of Information .....	652
9.2	The ex-Post View .....	662
9.3	The ex-ante View .....	668
9.4	Convergence of $\sigma$ -Fields and Prediction Sequences .....	673
9.5	Games with Incomplete Information .....	680
9.6	Markov Decision Chains with Unbounded Costs .....	684
9.7	Remarks .....	689
<b>10</b>	<b>Evolution Equations</b> .....	691
10.1	Lebesgue–Bochner Spaces .....	692
10.2	Semilinear Evolution Equations .....	701
10.3	Nonlinear Evolution Equations .....	718
10.4	Second-Order Nonlinear Evolution Equations .....	740
10.5	Remarks .....	750
	<b>References</b> .....	753
	<b>List of Symbols</b> .....	781
	<b>Index</b> .....	783
