<b>Preface</b> .....	xv
<b>Organization and Notation</b> .....	xix
<b>1 Lie Groups and Algebraic Groups</b> .....	1
1.1 The Classical Groups .....	1
1.1.1 General and Special Linear Groups .....	1
1.1.2 Isometry Groups of Bilinear Forms .....	3
1.1.3 Unitary Groups .....	7
1.1.4 Quaternionic Groups .....	8
1.1.5 Exercises .....	11
1.2 The Classical Lie Algebras .....	13
1.2.1 General and Special Linear Lie Algebras .....	13
1.2.2 Lie Algebras Associated with Bilinear Forms .....	14
1.2.3 Unitary Lie Algebras .....	15
1.2.4 Quaternionic Lie Algebras .....	16
1.2.5 Lie Algebras Associated with Classical Groups .....	17
1.2.6 Exercises .....	17
1.3 Closed Subgroups of $\mathbf{GL}(n, \mathbb{R})$ .....	18
1.3.1 Topological Groups .....	18
1.3.2 Exponential Map .....	19
1.3.3 Lie Algebra of a Closed Subgroup of $\mathbf{GL}(n, \mathbb{R})$ .....	23
1.3.4 Lie Algebras of the Classical Groups .....	25
1.3.5 Exponential Coordinates on Closed Subgroups .....	28
1.3.6 Differentials of Homomorphisms .....	30
1.3.7 Lie Algebras and Vector Fields .....	31
1.3.8 Exercises .....	34
1.4 Linear Algebraic Groups .....	35
1.4.1 Definitions and Examples .....	35
1.4.2 Regular Functions .....	36
1.4.3 Lie Algebra of an Algebraic Group .....	39

1.4.4	Algebraic Groups as Lie Groups	43
1.4.5	Exercises	45
1.5	Rational Representations	47
1.5.1	Definitions and Examples	47
1.5.2	Differential of a Rational Representation	49
1.5.3	The Adjoint Representation	53
1.5.4	Exercises	54
1.6	Jordan Decomposition	55
1.6.1	Rational Representations of $\mathbb{C}$	55
1.6.2	Rational Representations of $\mathbb{C}^\times$	57
1.6.3	Jordan–Chevalley Decomposition	58
1.6.4	Exercises	61
1.7	Real Forms of Complex Algebraic Groups	62
1.7.1	Real Forms and Complex Conjugations	62
1.7.2	Real Forms of the Classical Groups	65
1.7.3	Exercises	67
1.8	Notes	68
<b>2</b>	<b>Structure of Classical Groups</b>	<b>69</b>
2.1	Semisimple Elements	69
2.1.1	Toral Groups	70
2.1.2	Maximal Torus in a Classical Group	72
2.1.3	Exercises	76
2.2	Unipotent Elements	77
2.2.1	Low-Rank Examples	77
2.2.2	Unipotent Generation of Classical Groups	79
2.2.3	Connected Groups	81
2.2.4	Exercises	83
2.3	Regular Representations of $\mathbf{SL}(2, \mathbb{C})$	83
2.3.1	Irreducible Representations of $\mathfrak{sl}(2, \mathbb{C})$	84
2.3.2	Irreducible Regular Representations of $\mathbf{SL}(2, \mathbb{C})$	86
2.3.3	Complete Reducibility of $\mathbf{SL}(2, \mathbb{C})$	88
2.3.4	Exercises	90
2.4	The Adjoint Representation	91
2.4.1	Roots with Respect to a Maximal Torus	91
2.4.2	Commutation Relations of Root Spaces	95
2.4.3	Structure of Classical Root Systems	99
2.4.4	Irreducibility of the Adjoint Representation	104
2.4.5	Exercises	106
2.5	Semisimple Lie Algebras	108
2.5.1	Solvable Lie Algebras	108
2.5.2	Root Space Decomposition	114
2.5.3	Geometry of Root Systems	118
2.5.4	Conjugacy of Cartan Subalgebras	122
2.5.5	Exercises	125

2.6	Notes	125
<b>3</b>	<b>Highest-Weight Theory</b>	127
3.1	Roots and Weights	127
3.1.1	Weyl Group	128
3.1.2	Root Reflections	132
3.1.3	Weight Lattice	138
3.1.4	Dominant Weights	141
3.1.5	Exercises	145
3.2	Irreducible Representations	147
3.2.1	Theorem of the Highest Weight	148
3.2.2	Weights of Irreducible Representations	153
3.2.3	Lowest Weights and Dual Representations	157
3.2.4	Symplectic and Orthogonal Representations	158
3.2.5	Exercises	161
3.3	Reductivity of Classical Groups	163
3.3.1	Reductive Groups	163
3.3.2	Casimir Operator	166
3.3.3	Algebraic Proof of Complete Reducibility	169
3.3.4	The Unitarian Trick	171
3.3.5	Exercises	173
3.4	Notes	174
<b>4</b>	<b>Algebras and Representations</b>	175
4.1	Representations of Associative Algebras	175
4.1.1	Definitions and Examples	175
4.1.2	Schur's Lemma	180
4.1.3	Jacobson Density Theorem	181
4.1.4	Complete Reducibility	182
4.1.5	Double Commutant Theorem	184
4.1.6	Isotypic Decomposition and Multiplicities	184
4.1.7	Characters	187
4.1.8	Exercises	191
4.2	Duality for Group Representations	195
4.2.1	General Duality Theorem	195
4.2.2	Products of Reductive Groups	197
4.2.3	Isotypic Decomposition of $\mathcal{O}[G]$	199
4.2.4	Schur–Weyl Duality	200
4.2.5	Commuting Algebra and Highest-Weight Vectors	203
4.2.6	Abstract Capelli Theorem	204
4.2.7	Exercises	206
4.3	Group Algebras of Finite Groups	206
4.3.1	Structure of Group Algebras	206
4.3.2	Schur Orthogonality Relations	208
4.3.3	Fourier Inversion Formula	209

4.3.4	The Algebra of Central Functions	211
4.3.5	Exercises	214
4.4	Representations of Finite Groups	215
4.4.1	Induced Representations	216
4.4.2	Characters of Induced Representations	217
4.4.3	Standard Representation of $\mathfrak{S}_n$	218
4.4.4	Representations of $\mathfrak{S}_k$ on Tensors	221
4.4.5	Exercises	222
4.5	Notes	224
<b>5</b>	<b>Classical Invariant Theory</b>	<b>225</b>
5.1	Polynomial Invariants for Reductive Groups	226
5.1.1	The Ring of Invariants	226
5.1.2	Invariant Polynomials for $\mathfrak{S}_n$	228
5.1.3	Exercises	234
5.2	Polynomial Invariants	237
5.2.1	First Fundamental Theorems for Classical Groups	238
5.2.2	Proof of a Basic Case	242
5.2.3	Exercises	246
5.3	Tensor Invariants	246
5.3.1	Tensor Invariants for $\mathbf{GL}(V)$	247
5.3.2	Tensor Invariants for $\mathbf{O}(V)$ and $\mathbf{Sp}(V)$	248
5.3.3	Exercises	254
5.4	Polynomial FFT for Classical Groups	256
5.4.1	Invariant Polynomials as Tensors	256
5.4.2	Proof of Polynomial FFT for $\mathbf{GL}(V)$	258
5.4.3	Proof of Polynomial FFT for $\mathbf{O}(V)$ and $\mathbf{Sp}(V)$	258
5.5	Irreducible Representations of Classical Groups	259
5.5.1	Skew Duality for Classical Groups	259
5.5.2	Fundamental Representations	268
5.5.3	Cartan Product	272
5.5.4	Irreducible Representations of $\mathbf{GL}(V)$	273
5.5.5	Irreducible Representations of $\mathbf{O}(V)$	275
5.5.6	Exercises	277
5.6	Invariant Theory and Duality	278
5.6.1	Duality and the Weyl Algebra	278
5.6.2	$\mathbf{GL}(n)$ – $\mathbf{GL}(k)$ Schur–Weyl Duality	282
5.6.3	$\mathbf{O}(n)$ – $\mathfrak{sp}(k)$ Howe Duality	284
5.6.4	Spherical Harmonics	287
5.6.5	$\mathbf{Sp}(n)$ – $\mathfrak{so}(2k)$ Howe Duality	290
5.6.6	Exercises	292
5.7	Further Applications of Invariant Theory	293
5.7.1	Capelli Identities	293
5.7.2	Decomposition of $S(S^2(V))$ under $\mathbf{GL}(V)$	295
5.7.3	Decomposition of $S(\wedge^2(V))$ under $\mathbf{GL}(V)$	296

5.7.4	Exercises .....	298
5.8	Notes .....	298
<b>6</b>	<b>Spinors .....</b>	<b>301</b>
6.1	Clifford Algebras .....	301
6.1.1	Construction of $\text{Cliff}(V)$ .....	301
6.1.2	Spaces of Spinors .....	303
6.1.3	Structure of $\text{Cliff}(V)$ .....	307
6.1.4	Exercises .....	310
6.2	Spin Representations of Orthogonal Lie Algebras .....	311
6.2.1	Embedding $\mathfrak{so}(V)$ in $\text{Cliff}(V)$ .....	312
6.2.2	Spin Representations .....	314
6.2.3	Exercises .....	315
6.3	Spin Groups .....	316
6.3.1	Action of $\mathbf{O}(V)$ on $\text{Cliff}(V)$ .....	316
6.3.2	Algebraically Simply Connected Groups .....	321
6.3.3	Exercises .....	322
6.4	Real Forms of $\mathbf{Spin}(n, \mathbb{C})$ .....	323
6.4.1	Real Forms of Vector Spaces and Algebras .....	323
6.4.2	Real Forms of Clifford Algebras .....	325
6.4.3	Real Forms of $\mathbf{Pin}(n)$ and $\mathbf{Spin}(n)$ .....	325
6.4.4	Exercises .....	327
6.5	Notes .....	327
<b>7</b>	<b>Character Formulas .....</b>	<b>329</b>
7.1	Character and Dimension Formulas .....	329
7.1.1	Weyl Character Formula .....	329
7.1.2	Weyl Dimension Formula .....	334
7.1.3	Commutant Character Formulas .....	337
7.1.4	Exercises .....	339
7.2	Algebraic Group Approach to the Character Formula .....	342
7.2.1	Symmetric and Skew-Symmetric Functions .....	342
7.2.2	Characters and Skew-Symmetric Functions .....	344
7.2.3	Characters and Invariant Functions .....	346
7.2.4	Casimir Operator and Invariant Functions .....	347
7.2.5	Algebraic Proof of the Weyl Character Formula .....	352
7.2.6	Exercises .....	353
7.3	Compact Group Approach to the Character Formula .....	354
7.3.1	Compact Form and Maximal Compact Torus .....	354
7.3.2	Weyl Integral Formula .....	356
7.3.3	Fourier Expansions of Skew Functions .....	358
7.3.4	Analytic Proof of the Weyl Character Formula .....	360
7.3.5	Exercises .....	361
7.4	Notes .....	362

<b>8</b>	<b>Branching Laws</b>	363
8.1	Branching for Classical Groups	363
8.1.1	Statement of Branching Laws	364
8.1.2	Branching Patterns and Weight Multiplicities	366
8.1.3	Exercises	368
8.2	Branching Laws from Weyl Character Formula	370
8.2.1	Partition Functions	370
8.2.2	Kostant Multiplicity Formulas	371
8.2.3	Exercises	372
8.3	Proofs of Classical Branching Laws	373
8.3.1	Restriction from $\mathbf{GL}(n)$ to $\mathbf{GL}(n-1)$	373
8.3.2	Restriction from $\mathbf{Spin}(2n+1)$ to $\mathbf{Spin}(2n)$	375
8.3.3	Restriction from $\mathbf{Spin}(2n)$ to $\mathbf{Spin}(2n-1)$	378
8.3.4	Restriction from $\mathbf{Sp}(n)$ to $\mathbf{Sp}(n-1)$	379
8.4	Notes	384
<b>9</b>	<b>Tensor Representations of <math>\mathbf{GL}(V)</math></b>	387
9.1	Schur–Weyl Duality	387
9.1.1	Duality between $\mathbf{GL}(n)$ and $\mathfrak{S}_k$	388
9.1.2	Characters of $\mathfrak{S}_k$	391
9.1.3	Frobenius Formula	394
9.1.4	Exercises	396
9.2	Dual Reductive Pairs	399
9.2.1	Seesaw Pairs	399
9.2.2	Reciprocity Laws	401
9.2.3	Schur–Weyl Duality and $\mathbf{GL}(k)$ – $\mathbf{GL}(n)$ Duality	405
9.2.4	Exercises	406
9.3	Young Symmetrizers and Weyl Modules	407
9.3.1	Tableaux and Symmetrizers	407
9.3.2	Weyl Modules	412
9.3.3	Standard Tableaux	414
9.3.4	Projections onto Isotypic Components	416
9.3.5	Littlewood–Richardson Rule	418
9.3.6	Exercises	421
9.4	Notes	423
<b>10</b>	<b>Tensor Representations of <math>\mathbf{O}(V)</math> and <math>\mathbf{Sp}(V)</math></b>	425
10.1	Commuting Algebras on Tensor Spaces	425
10.1.1	Centralizer Algebra	426
10.1.2	Generators and Relations	432
10.1.3	Exercises	434
10.2	Decomposition of Harmonic Tensors	435
10.2.1	Harmonic Tensors	435
10.2.2	Harmonic Extreme Tensors	436
10.2.3	Decomposition of Harmonics for $\mathbf{Sp}(V)$	440

10.2.4	Decomposition of Harmonics for $\mathbf{O}(2l+1)$	442
10.2.5	Decomposition of Harmonics for $\mathbf{O}(2l)$	446
10.2.6	Exercises	451
10.3	Riemannian Curvature Tensors	451
10.3.1	The Space of Curvature Tensors	453
10.3.2	Orthogonal Decomposition of Curvature Tensors	455
10.3.3	The Space of Weyl Curvature Tensors	458
10.3.4	Exercises	460
10.4	Invariant Theory and Knot Polynomials	461
10.4.1	The Braid Relations	461
10.4.2	Orthogonal Invariants and the Yang–Baxter Equation	463
10.4.3	The Braid Group	464
10.4.4	The Jones Polynomial	469
10.4.5	Exercises	475
10.5	Notes	476
<b>11</b>	<b>Algebraic Groups and Homogeneous Spaces</b>	<b>479</b>
11.1	General Properties of Linear Algebraic Groups	479
11.1.1	Algebraic Groups as Affine Varieties	479
11.1.2	Subgroups and Homomorphisms	481
11.1.3	Group Structures on Affine Varieties	484
11.1.4	Quotient Groups	485
11.1.5	Exercises	490
11.2	Structure of Algebraic Groups	491
11.2.1	Commutative Algebraic Groups	491
11.2.2	Unipotent Radical	493
11.2.3	Connected Algebraic Groups and Lie Groups	496
11.2.4	Simply Connected Semisimple Groups	497
11.2.5	Exercises	500
11.3	Homogeneous Spaces	500
11.3.1	$G$ -Spaces and Orbits	500
11.3.2	Flag Manifolds	501
11.3.3	Involutions and Symmetric Spaces	506
11.3.4	Involutions of Classical Groups	507
11.3.5	Classical Symmetric Spaces	510
11.3.6	Exercises	516
11.4	Borel Subgroups	519
11.4.1	Solvable Groups	519
11.4.2	Lie–Kolchin Theorem	520
11.4.3	Structure of Connected Solvable Groups	522
11.4.4	Conjugacy of Borel Subgroups	524
11.4.5	Centralizer of a Torus	525
11.4.6	Weyl Group and Regular Semisimple Conjugacy Classes	526
11.4.7	Exercises	530
11.5	Further Properties of Real Forms	531

11.5.1	Groups with a Compact Real Form	531
11.5.2	Polar Decomposition by a Compact Form	536
11.6	Gauss Decomposition	538
11.6.1	Gauss Decomposition of $\mathbf{GL}(n, \mathbb{C})$	538
11.6.2	Gauss Decomposition of an Algebraic Group	540
11.6.3	Gauss Decomposition for Real Forms	541
11.6.4	Exercises	543
11.7	Notes	543
<b>12</b>	<b>Representations on Spaces of Regular Functions</b>	<b>545</b>
12.1	Some General Results	545
12.1.1	Isotypic Decomposition of $\mathcal{O}[X]$	546
12.1.2	Frobenius Reciprocity	548
12.1.3	Function Models for Irreducible Representations	549
12.1.4	Exercises	550
12.2	Multiplicity-Free Spaces	551
12.2.1	Multiplicities and $B$ -Orbits	552
12.2.2	$B$ -Eigenfunctions for Linear Actions	553
12.2.3	Branching from $\mathbf{GL}(n)$ to $\mathbf{GL}(n-1)$	554
12.2.4	Second Fundamental Theorems	557
12.2.5	Exercises	563
12.3	Regular Functions on Symmetric Spaces	566
12.3.1	Iwasawa Decomposition	566
12.3.2	Examples of Iwasawa Decompositions	575
12.3.3	Spherical Representations	585
12.3.4	Exercises	587
12.4	Isotropy Representations of Symmetric Spaces	588
12.4.1	A Theorem of Kostant and Rallis	589
12.4.2	Invariant Theory of Reflection Groups	590
12.4.3	Classical Examples	593
12.4.4	Some Results from Algebraic Geometry	597
12.4.5	Proof of the Kostant–Rallis Theorem	601
12.4.6	Some Remarks on the Proof	605
12.4.7	Exercises	607
12.5	Notes	609
<b>A</b>	<b>Algebraic Geometry</b>	<b>611</b>
A.1	Affine Algebraic Sets	611
A.1.1	Basic Properties	611
A.1.2	Zariski Topology	615
A.1.3	Products of Affine Sets	616
A.1.4	Principal Open Sets	617
A.1.5	Irreducible Components	617
A.1.6	Transcendence Degree and Dimension	619
A.1.7	Exercises	621

A.2	Maps of Algebraic Sets	622
A.2.1	Rational Maps	622
A.2.2	Extensions of Homomorphisms	623
A.2.3	Image of a Dominant Map	626
A.2.4	Factorization of a Regular Map	626
A.2.5	Exercises	627
A.3	Tangent Spaces	628
A.3.1	Tangent Space and Differentials of Maps	628
A.3.2	Vector Fields	630
A.3.3	Dimension	630
A.3.4	Differential Criterion for Dominance	632
A.4	Projective and Quasiprojective Sets	635
A.4.1	Basic Definitions	635
A.4.2	Products of Projective Sets	637
A.4.3	Regular Functions and Maps	638
<b>B</b>	<b>Linear and Multilinear Algebra</b>	<b>643</b>
B.1	Jordan Decomposition	643
B.1.1	Primary Projections	643
B.1.2	Additive Jordan Decomposition	644
B.1.3	Multiplicative Jordan Decomposition	645
B.2	Multilinear Algebra	645
B.2.1	Bilinear Forms	646
B.2.2	Tensor Products	647
B.2.3	Symmetric Tensors	650
B.2.4	Alternating Tensors	653
B.2.5	Determinants and Gauss Decomposition	654
B.2.6	Pfaffians and Skew-Symmetric Matrices	656
B.2.7	Irreducibility of Determinants and Pfaffians	659
<b>C</b>	<b>Associative Algebras and Lie Algebras</b>	<b>661</b>
C.1	Some Associative Algebras	661
C.1.1	Filtered and Graded Algebras	661
C.1.2	Tensor Algebra	663
C.1.3	Symmetric Algebra	663
C.1.4	Exterior Algebra	666
C.1.5	Exercises	668
C.2	Universal Enveloping Algebras	668
C.2.1	Lie Algebras	668
C.2.2	Poincaré–Birkhoff–Witt Theorem	670
C.2.3	Adjoint Representation of Enveloping Algebra	672

<b>D</b>	<b>Manifolds and Lie Groups</b>	675
D.1	$C^\infty$ Manifolds	675
D.1.1	Basic Definitions	675
D.1.2	Tangent Space	680
D.1.3	Differential Forms and Integration	683
D.1.4	Exercises	686
D.2	Lie Groups	687
D.2.1	Basic Definitions	687
D.2.2	Lie Algebra of a Lie Group	688
D.2.3	Homogeneous Spaces	691
D.2.4	Integration on Lie Groups and Homogeneous Spaces	692
D.2.5	Exercises	696
	<b>References</b>	697
	<b>Index of Symbols</b>	705
