

# CONTENTS

<b>Preface</b> .....	xi
<b>List of Color Figures</b> .....	xxiii

## *Chapter 1*

<b>Introduction</b> .....	1
---------------------------	---

*John R. Pilbrow*

## **HIGH-RESOLUTION EPR METHODS**

## *Chapter 2*

<b>Advanced Pulse EPR Methods for the Characterization of Metalloproteins</b> .....	13
-------------------------------------------------------------------------------------	----

*Jeffrey Harmer, George Mitrikas, and Arthur Schweiger*

1. Introduction .....	13
2. Spin Hamiltonian .....	15
2.1. Static Spin Hamiltonian .....	15
2.2. Nuclear Frequency Spectra of Spin Systems with $S = \frac{1}{2}$ and Arbitrary I .....	17
2.3. Orientation Selection in Pulse EPR .....	18
3. ESEEM Basics .....	20
3.1. Origin of the Nuclear Modulation Effect .....	20
3.2. Two- and Three-Pulse ESEEM.....	22
3.3. HYSCORE.....	25
3.4. Remote Echo Detection .....	34
3.5. Matched ESEEM .....	35
3.6. DONUT-HYSCORE .....	37
3.7. Hyperfine Decoupling Techniques .....	37
4. Electron Nuclear Double Resonance (ENDOR).....	40
4.1. Mims and Davies ENDOR .....	41
4.2. Baseline Artifacts in ENDOR.....	43
4.3. Hyperfine-Correlated ENDOR Spectroscopy .....	44
4.4. Triple Resonance .....	46
4.5. Variable Mixing Time ENDOR.....	47
4.6. High-Field ENDOR .....	48

4.7. Hyperfine Enhancement of r.f. Pulses .....	50
4.8. Time-Domain ENDOR .....	50
5. Field-Swept EPR Experiments .....	52
5.1. Nutation Experiments .....	52
5.2. Electron Zeeman-Resolved EPR.....	54
6. Strategies and Outlook .....	54
7. Acknowledgements.....	56
8. References.....	56

### *Chapter 3*

<b>Probing Structural and Electronic Parameters in Randomly Oriented Metalloproteins by Orientation-Selective ENDOR Spectroscopy .....</b>	<b>63</b>
----------------------------------------------------------------------------------------------------------------------------------------------------	-----------

*Reinhard Kappl, Gerhard Bracic, and Jürgen Hüttermann*

1. Introduction .....	64
2. Theory .....	65
3. Orientation Selection in EPR and ENDOR .....	74
4. Examples of Applications: Iron–Sulfur Proteins.....	82
4.1. Proton Hyperfine Interactions.....	82
4.2. <sup>57</sup> Iron Interactions .....	94
4.3. Spin Densities .....	98
5. Summary .....	100
6. Acknowledgements.....	100
7. References.....	100

### *Chapter 4*

<b>Molecular Sophe: An Integrated Approach to the Structural Characterization of Metalloproteins: The Next Generation of Computer Simulation Software .....</b>	<b>105</b>
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------

*Graeme R. Hanson, Christopher J. Noble, and Simon Benson*

1. Introduction .....	105
2. Molecular Sophe Computational Software Suite .....	114
2.1. Project Form .....	117
2.2. Simulation Form .....	117
2.3. Sample Form.....	118
2.4. Molecule Form .....	119
2.5. Adding Atoms.....	119
2.6. Atom Form .....	121
2.7. Electron Zeeman Interaction ( $\beta$ B.g.S) .....	121
2.8. Hyperfine Interaction (S.A.I).....	122
2.9. Fine Structure Interaction (S.D.S) .....	123
2.10. Quadrupole Interaction (I.P.I) .....	124
2.11. Linewidth Parameters .....	126

2.12. Atom Isotopes.....	127
2.13. Position Form .....	128
2.14. Adding Bonds .....	129
2.15. SuperHyperfine Interactions (S.A.I).....	129
2.16. Exchange Interaction (S.J.S).....	130
2.17. Adding Experiments .....	132
2.18. Experiment Form.....	133
2.19. CW EPR Experiments .....	133
2.20. Sophe Computational Parameters .....	135
2.21. Spectra Input/Output.....	137
2.22. Resonator Configuration.....	138
2.23. Pulsed EPR Experiment: Hyperfine Sublevel Correlated Spectroscopy (HYSCORE).....	138
2.24. Pulsed EPR Experiment — Orientation Selective HYSCORE.....	142
2.25. Pulsed EPR–MIMS ENDOR .....	143
2.26. Units Conversion Calculator.....	145
2.27. Reports: Energy Level Diagrams.....	147
2.28. Main Menus.....	147
2.29. Tool Bar.....	147
2.30. Control Bar .....	149
3. Sophe: Computational Code.....	150
3.1. Sophe Grid.....	150
3.2. CW EPR Spectroscopy .....	152
3.3. Pulsed EPR Simulations .....	156
4. Molecular Sophe – Examples.....	159
4.1. CW-EPR Spectroscopy.....	159
4.2. Pulsed EPR Spectroscopy.....	167
5. Advances in Spectral Optimization .....	167
6. Conclusions .....	171
7. Acknowledgements.....	171
8. References.....	171

## Chapter 5

<b>Spin-Hamiltonian Parameters from First Principle Calculations: Theory and Application .....</b>	<b>175</b>
--------------------------------------------------------------------------------------------------------	------------

*Frank Neese*

1. Introduction .....	175
2. Electronic Structure Theory of Spin-Hamiltonian Parameters .....	177
2.1. Electronic Structure Methods .....	177
2.2. Additional Terms in the Hamiltonian .....	182
2.3. Sum-Over States Theory of SH Parameters.....	185
2.4. Linear Response Theory .....	188

2.5. Expression for Spin-Hamiltonian Parameters for Self-Consistent Field Methods.....	192
2.6. Practical Aspects.....	198
3. Case Studies .....	201
3.1. Structure–Spectral Relationships: Phenoxyl Radicals .....	201
3.2. Difficult Cases: Cysteine Radicals.....	203
3.3. Solvent Effects: <b>g</b> -Tensors of Nitroxide Radicals.....	207
3.4. SH Parameters in Proteins: QM/MM Studies .....	212
3.5. Zero-Field Splittings: Origin of ZFS in Organic Triplets and Diradicals.....	217
3.6. Zero-Field Splittings: Origin of the ZFS in Transition Metal Complexes .....	220
4. Concluding Remarks.....	222
5. Acknowledgements.....	224
6. References.....	224

## IRON PROTEINS

### *Chapter 6*

<b>EPR of Mononuclear Non-Heme Iron Proteins .....</b>	<b>233</b>
--------------------------------------------------------	------------

*Betty J. Gaffney*

1. EPR of Mononuclear, High-Spin Ferric Non-Heme Proteins.....	233
1.1. Assignment: The $S = 5/2$ EPR Parameter Space Is Large but Not Infinite .....	233
1.2. Assignment for Zero-Field Splitting: the Zeeman Term.....	236
1.3. Assignment for Zero-Field Splitting Similar to the Zeeman Term .....	240
1.4. High-Frequency EPR and Assignment for Zero-Field Splitting: The Zeeman Term.....	244
1.5. Contributions to Line Shapes.....	246
2. EPR of Mononuclear, Low-Spin Ferric Non-Heme Proteins.....	251
2.1. Nitrile Hydratase.....	251
3. Radical ( $S = 1/2$ ) Probes of Ferrous ( $S = 2$ ) Iron .....	251
3.1. Photosynthetic Reaction Centers .....	251
3.2. Nitric Oxide and Non-Heme Ferrous Centers.....	254
3.3. High-Spin NO Complexes with Non-Heme Iron Proteins.....	258
3.4. Low-Spin NO Complexes with Non-Heme Iron Proteins.....	261
4. References.....	264

*Chapter 7***Binuclear Non-Heme Iron Enzymes ..... 269***Nataša Mitić Gerhard Schenk, Graeme R. Hanson*

1. Introduction .....	269
2. Bacterial Multicomponent Monooxygenases .....	274
2.1. Methane Monooxygenase .....	274
2.2. Alkane $\omega$ -Hydroxylase .....	291
2.3. Alkene Monooxygenase .....	293
2.4. Phenol Hydroxylases .....	296
2.5. Toluene-4-Monooxygenase .....	299
2.6. Toluene/ <i>o</i> -Xylene Monooxygenase .....	300
3. Ribonucleotide Reductase .....	303
3.1. Biochemical and Structural Characterization .....	303
3.2. Spectroscopic Characterization of R2 .....	305
3.3. Mechanistic Insights .....	313
4. Stearoyl-Acyl Carrier Protein $\Delta^9$ Desaturase .....	314
4.1. Biochemical and Structural Characterization .....	314
4.2. Spectroscopic Characterization of $\Delta^9$ Desaturase .....	317
4.3. Mechanistic Implications .....	318
5. <i>Myo</i> -Inositol Oxygenase .....	320
5.1. Biochemical and Structural Characterization .....	320
5.2. Spectroscopic Characterization of MIOX .....	321
5.3. Mechanistic Implications .....	323
6. Rubrerythrin, Nigerythrin, and Sulerythrin .....	326
6.1. Rubrerythrin .....	326
6.2. Nigerythrin .....	330
6.3. Sulerythrin .....	332
7. Ferritins and Bacterioferritins .....	332
7.1. Biochemical and Structural Characterization .....	332
7.2. Spectroscopic Characterization of Ferritins and Bacterioferritins .....	335
7.3. Mechanistic Insights .....	337
8. Hemerythrin .....	337
8.1. Biochemical and Structural Characterization .....	337
8.2. Spectroscopic Characterization of Hemerythrin .....	339
8.3. Mechanistic Insights .....	340
9. Hydrolytic Enzymes .....	341
9.1. Purple Acid Phosphatases .....	341
9.2. Metallo- $\beta$ -Lactamases .....	346
10. Rubredoxin-Oxygen Oxidoreductase and Nitric Oxide Reductases .....	350
10.1. Biochemical and Structural Characterization .....	350
10.2. Spectroscopic Characterization of FprA and FIRd .....	352
10.3. Mechanistic Insights .....	352

11. Membrane-Bound Diiron Proteins:	
Alternative Oxidase.....	353
11.1. Biochemical and Structural Characterization .....	353
11.2. Spectroscopic Characterization of AOX.....	354
11.3. Mechanistic Insights .....	354
12. Conclusions .....	355
13. Acknowledgements.....	356
14. References.....	356

## Chapter 8

### Probing the Structure–Function Relationship of Heme Proteins Using Multifrequency

<b>Pulse EPR Techniques.....</b>	<b>397</b>
----------------------------------	------------

*Sabine Van Doorslaer*

1. Introduction .....	397
2. Ferric Forms of Heme Proteins .....	398
2.1. Low-Spin Ferric Forms of Heme Proteins .....	398
2.2. High-Spin Ferric Forms of Heme Proteins .....	406
3. NO-Ligated Heme Proteins .....	408
4. Distance Measurements in Heme Proteins .....	410
5. Conclusions and Outlook .....	411
6. Acknowledgements.....	412
7. References.....	412

## Chapter 9

### EPR Studies of the Chemical Dynamics of NO and Hemoglobin Interactions.....

419

*Benjamin P. Luchsinger, Eric D. Walter, Lisa J. Lee,  
Jonathan S. Stamler, and David J. Singel*

1. Introduction .....	419
1.1. NO Hb Functional Interactions .....	420
1.2. SNO-Hemoglobin .....	421
1.3. SNO-Hemoglobin Function .....	422
2. EPR Spectroscopy of NO Hb Interactions .....	424
2.1. Heme-Fe(II)NO Spectral Components .....	424
2.2. Heme Fe(II)NO Subunit Selectivity .....	427
2.3. Heme Fe(II)NO Subunit Spectral Editing.....	430
3. Evolution of NO Hb Interactions .....	431
4. Acknowledgements.....	433
5. References.....	433

## NICKEL AND COPPER ENZYMES

### Chapter 10

#### **EPR Investigation of [NiFe] Hydrogenases ..... 441**

*Maurice van Gastel and Wolfgang Lubitz*

1. Classification, Composition and Structure of Hydrogenases.....	442
2. Basic Description of the Electronic Structure .....	445
3. EPR Characterization of [NiFe] Hydrogenases: the <b>g</b> Tensors .....	448
3.1. The Oxidized States Ni–A and Ni–B.....	448
3.2. The Reduced Active State Ni–C.....	452
3.3. The Split Ni–C Signal.....	452
3.4. The Light-Induced State Ni–L .....	454
3.5. The Ni–CO State.....	455
4. ENDOR and ESEEM Studies of [NiFe] Hydrogenase: Hyperfine Structure.....	456
4.1. Hyperfine Couplings of Metal Nuclei.....	456
4.2. HFCs of Ligand Nuclei.....	457
4.3. The Bridging Ligand X.....	458
4.4. Light Sensitivity of the Active Intermediate .....	460
4.5. Interaction of the Active Site with the Protein Surrounding.....	461
5. Distance Studies of [NiFe] Hydrogenases.....	462
6. EPR-Silent States .....	462
7. Conclusions and Outlook .....	462
8. Acknowledgements.....	464
9. References.....	464

### Chapter 11

#### **Unique Spectroscopic Features and Electronic Structures of Copper Proteins: Relation to Reactivity ..... 471**

*Jungjoo Yoon and Edward I. Solomon*

1. Introduction .....	471
2. Mononuclear Blue “Type 1” Cu Sites .....	475
3. Binuclear Cu <sub>A</sub> Sites .....	478
4. Coupled Binuclear “Type 3” Cu Sites.....	481
5. Non-Coupled Binuclear Cu Sites .....	483
6. Trinuclear Cu(II) Cluster Sites .....	486
7. Tetranuclear Cu <sub>Z</sub> Sites.....	493
8. Concluding Comments.....	496
9. Acknowledgements.....	496
10. References.....	496

## METALS IN MEDICINE

### Chapter 12

#### Insulin-Enhancing Vanadium Pharmaceuticals:

#### The Role of Electron Paramagnetic Resonance

#### Methods in the Evaluation of Antidiabetic Potential..... 507

*Barry D. Liboiron*

1. Introduction ..... 507
  - 1.1. EPR and the Study of Insulin-Enhancing Vanadium Compounds ..... 509
  - 1.2. EPR Properties of the Vanadyl Ion ..... 510
  - 1.3. The Additivity Rule ..... 512
2. In Vitro Studies of Vanadium Speciation and Redox Chemistry ..... 512
  - 2.1. Solution Structures of Insulin-Enhancing Vanadium(IV) Complexes ..... 514
  - 2.2. Interactions of Serum Proteins and Vanadyl Compounds..... 520
3. Use of EPR for In Vivo Studies of Vanadium Metabolism and Coordination Structure..... 525
  - 3.1. Absorption and In Vivo Redox Reactions of Vanadium Compounds ..... 526
  - 3.2. In Vivo Pharmacokinetics of Vanadium Species by BCM-EPR..... 529
  - 3.3. In Vivo Structure Determination by CW and Pulsed EPR..... 532
4. Summary ..... 540
5. Acknowledgements ..... 541
6. Abbreviations..... 541
7. References..... 543

### Chapter 13

#### Chromium in Cancer and Dietary Supplements..... 551

*Aviva Levina, Rachel Codd and Peter A. Lay*

1. Roles of Reactive Intermediates in Chromium(VI)-Induced Toxicity and in Anti-Diabetic Effects of Chromium(III) ..... 552
2. Chromium(V) Intermediates ..... 554
  - 2.1. Isolation and Characterization of Chromium(V) Complexes with Biological and Biomimetic Ligands ..... 554
  - 2.2. Application of EPR Spectroscopic Parameters to the Structural Characterization of Chromium(V) Complexes ..... 557
  - 2.3. Chromium(V) Complexes of Carbohydrates and Their Derivatives.... 561
3. Chromium(III) and Chromium(IV) Species ..... 565
4. Free Radicals as Intermediates in Chromium Biochemistry ..... 568
5. Living Cell and Animal Studies ..... 569
6. Acknowledgements..... 572
7. References..... 573

*Chapter 14***High-Frequency EPR and ENDOR Characterization  
of MRI Contrast Agents .....**

581

*Arnold M. Raitsimring, Andrei V. Astashkin,  
and Peter Caravan*

1. Introduction .....	581
2. Frequency Dependence of Gd(III) Electronic Relaxation in Aqueous Solution .....	586
3. Crystal Field Interaction (CFI) Parameters for Gd(III) Complexes in Glassy Solutions from High-Field EPR Experiments .....	590
4. High-Field Pulsed ENDOR of Water Ligands in MRI Agents and the Geometry of Water Coordination .....	597
4.1. Effect of Weak cfi on Nuclear Transition Frequencies and Appearance of ENDOR Spectra .....	597
4.2. $^{17}\text{O}$ ENDOR Frequencies at High Field .....	601
4.3. Practical Aspects of Pulsed ENDOR Spectroscopy of MRI Agents .....	603
4.4. Experimental $^1\text{H}$ ENDOR Spectra .....	605
4.5. Experimental $^{17}\text{O}$ ENDOR Spectra .....	607
4.6. Interpretation of $^{17}\text{O}$ hfi and nqi Parameters in Terms of Electronic and Geometrical Structure .....	609
4.7. Hydration Numbers of Gd(III) Complexes Determined by High-Field Pulsed $^{17}\text{O}$ and $^1\text{H}$ ENDOR .....	612
5. Conclusions .....	616
6. Acknowledgements .....	616
7. References .....	617

<b>Contents of Previous Volumes .....</b>	<b>623</b>

<b>Index .....</b>	<b>651</b>
--------------------	------------

High Resolution EPR

Applications to Metalloenzymes and Metals in Medicine

Hanson, G.; Berliner, L. (Eds.)

2009, XXV, 666 p., Hardcover

ISBN: 978-0-387-84855-6
