

Acknowledgements.....	v
Introduction.....	xiii
Deep-Sky Video Astronomy	
Chapter 1 Using Video for Astronomy	1
1.1 The Image Sensor	2
1.2 Efficiency in Astrophotography.....	4
1.3 Progressive Scan.....	4
1.4 Interlaced TV Images	4
1.5 Video Resolution	7
1.6 Low Light Performance	8
1.7 Hot Pixels	10
1.8 Color Versus Black and White.....	10
1.9 CCD Sizes and Image Scale.....	12
Chapter 2 Cameras	17
2.1 Image Accumulation Cameras.....	17
2.2 Cameras Modified for Astronomy.....	20
2.3 Basic Camera Features.....	20
2.4 Camera Control.....	23
2.5 Shutter Speed	23
2.6 Signal Gain Control.....	24
2.7 Gamma Settings.....	25
2.8 Accumulation Mode.....	26
2.9 Video Cables and Connections	28

Chapter 3	Video Capture.....	31
3.1	Digitizing Video.....	31
3.2	Software Capture Tools	32
3.3	Aspect Ratio	33
3.4	Capture Resolution.....	35
3.5	Image Quality	37
3.6	RGB Color Spaces.....	37
3.7	Recording Directly to DVD.....	38
3.8	Bright Object Smearing in Videotape Recordings.....	39
3.9	8-Bit Grayscale Images.....	40
3.10	Understanding Capture Rates.....	41
3.11	Storage Mediums.....	43
3.12	File Sizes	44
Chapter 4	At the Telescope.....	47
4.1	Focal Reducers	47
4.2	Barlow Lens.....	48
4.3	Eyepiece Projection	50
4.4	Filters.....	51
4.5	Filter Selectors.....	51
4.6	Real-Time Video Observations.....	54
4.7	Creating a Video Portrait	55
4.8	Dark Frames	55
4.9	Flat Fields	56
4.10	Avoiding Dust Motes.....	59
4.11	Image Scale and Resolution	60
4.12	A Basic Plan for Your Imaging Session.....	61
4.13	Guiding and Tracking Corrections.....	66
4.14	How Many Images Should be Captured?	67
4.15	Framing Multiple Fields to Capture Large Objects	69
Chapter 5	Initial Processing	71
5.1	Software for Initial Processing of Video Files.....	71
5.2	Stacking with Registax Direct from an AVI File.....	73
5.3	Manually Stacking Images.....	78
Chapter 6	Final Processing	83
6.1	Calibrating Your Computer Monitor	84
6.2	Extracting the Detail.....	85
6.3	Vignette/Gradient Removal	90
6.4	Unsharp Masking	95
6.5	Making Color from Black and White Images	103
6.6	Color Balance.....	107
6.7	Adding a Luminance Channel to RGB	112
6.8	Making a Simulated Green Channel.....	113
6.9	Adjusting Color Shift in Single CCD Color Camera Images.....	117

6.10	Removing Artifacts	117
6.11	Blending MultiField Images	126
6.12	Printed Video Images	130
6.13	Publishing Images to a Website	132
Chapter 7	Other Video Applications.....	133
7.1	Lunar and Minor Planet Occultations	133
7.2	Astrometry	135
7.3	Supernova Searching.....	136
7.4	Meteor Observations.....	137
7.5	Video as a Guiding Tool	137
7.6	Manual Guiding.....	140
7.7	Automatic Guiding.....	141
7.8	Video Finderscope	142
7.9	Video Polar Alignment	144
7.10	Collimating with Video	144
7.11	Detecting Faint Planetary Moons.....	145
7.12	Near Infrared: Imaging the Unseen	146
Chapter 8	The Gallery	149
8.1	Suburban Light-Polluted Skies	149
8.2	Dark Country Skies	160
Glossary		173
