Part I Low Level Approach for Image and Video Understanding

1	GOP Structure Conversion in Transcoding MPEG-2 to H.264/AVC	3
	Kangjun Lee, Gwanggil Jeon and Jechang Jeong	
1.1	Introduction	3
1.2	GOP Structure Conversion	5
1.2.1	MV Scaling in the Temporal Direction	5
1.2.2	Correlation Between the Current MB Mode and the Reference Region	6
1.3	Proposed Algorithms	8
1.3.1	Adaptive Search Range Selection through the MV Linearity Test in the Temporal Direction	8
1.3.2	Adaptive Mode Decision Method Based on Region Information	9
1.4	Simulation Results	13
1.5	Conclusion	16
	References	16
2	Simple Low Level Features for Image Analysis	17
	Paolo Falcoz	
2.1	Introduction	17
2.2	The Role of Color	19
2.2.1	Color Spaces	20
2.2.2	HSL and HSV	23
2.2.3	CIE-Lab	25
2.2.4	Color Flattening	26
2.3	Blob Detection	27
2.4	Edge Detection	30
2.5	Simple Shapes	33
2.5.1	Scale and Position Invariants: Procrustes Analysis	33
2.5.2	Shape Alignment: Iterative Closest Point	34

2.5.3	Shape Encoding and Matching: Curvature Space Scale . .	35
2.6	Combination of simple features	37
2.7	Conclusions	38
	References	39
3	Fast and robust Face Detection	43
	Marco Anisetti	
3.1	Related work	43
3.1.1	Feature-based	44
3.1.1.1	Low level	44
3.1.1.2	Skin-map	45
3.1.1.3	Feature analysis	48
3.1.1.4	Template based	49
3.1.2	Appearance-based	50
3.2	Introduction	52
3.3	Face detection on video stream	52
3.3.1	Efficient object detection	53
3.3.2	Appearance-based face detection	56
3.3.3	Features-based face detection	58
3.3.3.1	Adaptive Skin detection	59
3.3.3.2	Eyes detection and validation	61
3.3.3.3	Face normalization	64
3.4	Experimental results	64
3.4.1	Discussion and Conclusions	68
	References	69
4	Automatic 3D Facial Fitting for Tracking in Video Sequence	73
	Valerio Bellandi	
4.1	The 3D Face Model	73
4.2	3D morphing basis	75
4.2.1	3D morphing basis for shape and expression	77
4.2.1.1	Shape Unit	77
4.2.1.2	Expression Unit	79
4.3	Appearance basis	81
4.3.0.3	PCA	81
4.3.0.4	Image-based PCA	82
4.4	3D Illumination basis	87
4.5	The General Purposes 3D Tracking Algorithm	90
4.5.1	Feature Location	92
4.6	Model adaptation	94
4.6.1	Feature-based pose estimation	95
4.6.2	Shape and expression inference	98
4.6.3	3D Tracking-based Model refinement	101
4.6.4	Initial refinement	101
4.6.5	Deep refinement	103
4.7	Experimental results	105

Part II Multimedia Knowledge-Based Approaches and Applications

5 Input Devices and Interaction Techniques for VR-Enhanced Medicine	115
Luigi Gallo and Giuseppe De Pietro	
5.1 Introduction	116
5.2 Related Works	117
5.3 Requirements Analysis	119
5.4 Interaction Metaphors and Techniques	121
5.4.1 Realistic Metaphors	122
5.4.1.1 A Realistic Metaphor: Virtual Hand	122
5.4.2 Magic Metaphors	122
5.4.2.1 A Magic Metaphor: Virtual Pointer	123
5.4.3 Pros and Cons of Realistic vs. Magic Interaction Metaphors	123
5.5 The Proposed Input Device: the Wiimote	124
5.5.1 Communication	125
5.5.2 Inputs	125
5.5.3 Outputs	125
5.5.4 Classification	125
5.6 The Proposed Interaction Techniques	126
5.6.1 The Manipulation State	126
5.6.1.1 Pointing	127
5.6.1.2 Translation and Zooming	127
5.6.1.3 Rotation	128
5.6.2 The Cropping State	130
5.7 Discussion	132
References	132
6 Bridging Sensing and Decision Making in Ambient Intelligence Environments	135
Elie Raad, Bechara Al Bouna and Richard Chbeir	
6.1 Introduction	136
6.2 Related Works	137
6.3 Preliminaries	139
6.4 Templates	141
6.5 Uncertainty Resolver <i>via</i> Aggregation Functions	142
6.5.1 Average-based Function	143
6.5.2 Bayesian Network-Based Function	143
6.5.3 "Dempster and Shafer"-Based Function	146
6.5.4 Decision Tree-Based Function	148
6.6 Experimentation	150
6.6.1 Aggregation Function Accuracy and Time Processing ..	151
6.6.2 Value Distribution	153

6.6.2.1	Test 1: Values higher than 0.5	153
6.6.2.2	Test 2: Values less than 0.5	154
6.6.2.3	Test 3: Random Values	154
6.6.2.4	Test 5: 75% of the values are less than 0.5	156
6.6.2.5	Test 6: Equally distributed values	157
6.6.2.6	Test 7: Distribution change	158
6.6.2.7	Test 8: Influence of the number of returned values 0 and 1 on the aggregated result	158
6.6.2.8	Discussion	159
6.6.3	Template Tuning	160
6.6.3.1	Case 1: using the multimedia function f_1	161
6.6.3.2	Case 2: using the multimedia function f_2	162
6.6.3.3	Uncertainty threshold tuning	162
6.7	Conclusion	163
	References	163
7	Ambient Intelligence in Multimedia and Virtual Reality	
	Environments for the rehabilitation	165
	Atila Benko and Sik Lanyi Cecilia	
7.1	Introduction	166
7.2	Using AI by special needs users	167
7.2.1	Visual Impairment and Partially Sighted People	167
7.2.2	Deaf and Hard-of-Hearing People	168
7.2.3	Physically Disabled Persons	168
7.2.4	Mentally Disabled People	169
7.2.5	Smart Home	169
7.3	A detailed example of using AI in virtual reality for rehabilitation	170
7.4	Future vision	174
7.5	Conclusion	175
