Preface	v
1 Basic Equations	1
Jiashi Yang	
1.1 Introduction	1
1.2 Basic Equations	1
1.3 Principle of Superposition	4
1.4 Hamilton’s Principle	5
1.5 Poynting’s Theorem and Energy Integral	6
1.6 Uniqueness	7
1.7 Four-Vector Formulation	8
1.8 Cylindrical Coordinates	9
1.9 Spherical Coordinates	10
1.10 Compact Matrix Notation	11
References	12
2 Green’s Functions	13
Ernian Pan	
2.1 Introduction	13
2.2 Governing Equations	14
2.3 Relations Among Different Sources and Their Responses	17
2.4 Green’s Functions in Anisotropic Two-Dimensional Infinite, Half, and Bimaterial Planes	21
2.4.1 Green’s Functions in Anisotropic 2D Infinite Planes Due to a Line Force and Line Dislocation ...	21
2.4.2 Green’s Functions in Anisotropic 2D Half-Planes Due to a Line Force and Line Dislocation	23
2.4.3 Green’s Functions in 2D Anisotropic Bimaterial Plane Due to a Line Force and Line Dislocation	24

2.5	Green's Functions in Three-Dimensional Infinite, Half, and Bimaterial Spaces: Transverse Isotropy	26
2.5.1	Green's Functions for Infinite Space	27
2.5.2	Green's Functions for Half and Bimaterial Spaces	28
2.6	Green's Functions in Three-Dimensional Infinite, Half, and Bimaterial Spaces: General Anisotropy	31
2.6.1	Infinite Space	32
2.6.2	Half-Space	33
2.6.3	Bimaterial Space	34
2.7	Green's Functions in Layered Half-Space	36
2.7.1	General N- and LM-Type Solutions in the Transformed Domain	38
2.7.2	Propagator Matrix Method for Multilayered Structures	39
2.7.3	Physical Domain Solutions	40
2.8	Conclusions	41
	References	41
3	Two-Dimensional Static Problems:	
	Stroh Formalism	47
	Hui Fan	
3.1	Introduction and General Equations	47
3.1.1	Two-Dimensional Piezoelectric Boundary Value Problems via Stroh Formalism	49
3.1.2	Eight-Dimensional Representation of Piezoelectricity	51
3.1.3	Historical Remarks on Stroh Formalism	53
3.2	Piezoelectric Solid with an Elliptic Inclusion	54
3.2.1	Importance of the Inclusion Problem	54
3.2.2	Elliptic Inclusion Embedded in an Infinitely Extended Solid	54
3.2.3	Remarks	57
3.3	Cracks in Piezoelectric Solids	57
3.3.1	Crack-Tip Solution	58
3.3.2	Crack Front Coincides with Poling Direction (x_3 -Axis)	60
3.3.3	Full Field Solutions	61
3.4	Contact Problems	64
3.4.1	Nonslip Contact	66
3.4.2	Slip Contact	67
3.4.3	Decoupled Elastic and Dielectric Contact	68
3.4.4	Piezoelectric Half-Space with Poling Direction Along the x_3 -Axis	70
3.5	Decay Analysis for a Piezoelectric Strip	70
3.5.1	Saint-Venant Principle and Decay Analysis	70

3.5.2	Eigenexpansion for the Piezoelectric Strip	72
3.5.3	Boundary Conditions and Determination of Eigenvalues λ_k	73
3.5.4	Examples of Decay Factor in the Piezoelectric Strip	75
3.5.5	Remarks	77
	References	78
4	Fracture and Crack Mechanics	81
	Yasuhide Shindo	
4.1	Introduction	81
4.2	Piezoelectric Crack Mechanics	82
4.2.1	Fundamental Equations	82
4.2.2	Crack Face Boundary Conditions	87
4.2.3	Fracture Mechanics Parameters	91
4.3	Fracture Test and Analysis	116
4.3.1	Indentation Fracture	116
4.3.2	Bending Fracture	118
4.3.3	Fracture of Cracked Specimens	123
4.4	Fatigue Test and Analysis	129
4.5	Summary and Future Research Directions	131
	References	132
5	Boundary Element Method	137
	Qing-Hua Qin	
5.1	Introduction	137
5.2	Boundary Integral Formulations	138
5.2.1	Governing Equations	138
5.2.2	Boundary Integral Equation	138
5.2.3	Boundary Element Equation	144
5.3	One-Dimensional Elements	145
5.3.1	Shape Functions	145
5.3.2	Differential Geometry	147
5.4	Two-Dimensional Elements	148
5.4.1	Shape Functions	148
5.4.2	Differential Geometry	150
5.5	Numerical Integration over Elements	151
5.5.1	One-Dimensional Elements	151
5.5.2	Two-Dimensional Elements	152
5.6	Treatment of Singular Integrals	153
5.6.1	Nearly Singular Integrals	153
5.6.2	Weakly Singular Integrals	153
5.6.3	Nonhypersingular Integrals	154
5.6.4	Hypersingular Integrals	155
5.7	Evaluation of Domain Integrals	156
5.7.1	Dual Reciprocity Formulation	156
5.7.2	Coefficients α	158

5.7.3	Particular Solutions \hat{U} and Approximation Functions b	158
5.8	Multidomain Problems	159
5.9	Numerical Examples	160
5.9.1	A Piezoelectric Column Under Uniaxial Tension	160
5.9.2	A Horizontal Finite Crack in an Infinite Piezoelectric Medium	162
5.9.3	A Rectangular Piezoelectric Solid with a Central Inclined Crack	164
	References	166
6	Waves in Strained/Polarized Media	169
	Olivian Simionescu-Panait	
6.1	Introduction	169
6.2	Basic Equations	170
6.2.1	The Quasi-Electrostatic Approximation of Balance Equations	170
6.2.2	Small Deformation and Electric Fields Superposed on Large Static Deformation and Electric Fields	173
6.2.3	Special Cases: Homogeneous Initial State and Nonpolarisable Environment	178
6.2.4	Dynamic and Static Energy Balance. Incremental Initial and Boundary Value Problems	181
6.2.5	Static and Dynamic Local Stability. Propagation of Plane Harmonic Waves	183
6.2.6	Characteristic Surfaces	186
6.3	Plane Harmonic Wave Propagation in Crystals Subject to Initial Electromechanical Fields	187
6.3.1	Isotropic Solids. The Electrostrictive Effect	187
6.3.2	Cubic Crystals. Generalised Anisotropy Factor, Slowness Surfaces	193
6.3.3	6 mm-Type Crystals. Generalised Electromechanical Coupling Coefficient, Slowness Surfaces	200
6.4	Propagation of Attenuated Waves in Crystals Subject to Initial Electromechanical Fields	215
6.4.1	Fundamental Equations. Acoustic Tensor	216
6.4.2	Isotropic Solids. Approximate Solutions	217
6.4.3	Cubic Crystals. Approximate Solutions. Generalised Anisotropy Factor	223
6.5	The Coupling of Guided Plane Waves in Piezoelectric Crystals Subject to Initial Electromechanical Fields	235
6.5.1	Coupling Conditions for Waveguide Propagation ...	236

6.5.2	The Decoupling of Mechanical and Electrical Boundary Conditions	241
6.6	Conclusions	244
	References	244
7	Fully Dynamic Theory	247
	Jiashi Yang	
7.1	Introduction	247
7.2	Governing Equations	248
7.3	Variational Formulation	249
7.4	Quasistatic Approximation	250
7.5	Antiplane Problems of Polarized Ceramics	251
7.6	A Moving Dislocation	253
7.7	Surface Waves	256
	7.7.1 An Electroded Half-Space	257
	7.7.2 An Unelectroded Half-Space	258
7.8	Waves in a Plate Between Two Half-Spaces	259
	7.8.1 Dispersion Relations	259
	7.8.2 Special Cases	262
	7.8.3 Numerical Results for Acoustic Modes	266
	7.8.4 Electromagnetic Modes and Acoustic Leaking	268
7.9	Electromagnetic Radiation from a Vibrating Cylinder	273
	References	278
8	Nonlocal and Gradient Effects	281
	Jiashi Yang	
8.1	Introduction	281
8.2	Nonlocal Theory	282
8.3	Thin-Film Capacitance by Nonlocal Theory	283
8.4	Electromechanical Coupling by Nonlocal Theory	288
	8.4.1 Shorted Electrodes	289
	8.4.2 Open Electrodes	289
	8.4.3 Electromechanical Coupling Factor	291
	8.4.4 Numerical Results	292
	8.4.5 Comparison with Experiment	294
8.5	Gradient Effects as Weak Nonlocal Effects	294
8.6	Gradient Effects and Lattice Dynamics	296
8.7	Polarization Gradient Theory	296
8.8	Electric Field Gradient Theory	298
8.9	Antiplane Problems of Polarized Ceramics	300
8.10	A General Solution in Polar Coordinates	300
8.11	A Line Source	301
8.12	Dispersion of Short Plane Waves	302
8.13	Dispersion of Short Surface Waves	303
8.14	A Circular Inclusion	307
	8.14.1 Exterior Fields	307

8.14.2	Interior Fields	309
8.14.3	Continuity Conditions	310
8.14.4	Numerical Results	310
8.15	A Semi-Infinite Crack	313
References	316
Appendix: Electroelastic Material Constants		319
References	329

Special Topics in the Theory of Piezoelectricity

Yang, J. (Ed.)

2009, XII, 329 p. 89 illus., Hardcover
