Foreword	v
Preface to the Second Edition	vii
Preface to the First Edition	ix

Chapter 1 Introduction 1

The problems. Where are we headed? The ecosystem approach. Classification of land as ecosystems. Ecosystem-based planning. Predicting effects. Levels of integration. Structure: the basis of classification. Need for recognizing ecosystems at various scales. Ecosystem geography. Do we know enough? Need to delineate ecosystem boundaries. The genetic approach.

Chapter 2 Scale of Ecosystem Units 25

Site. Landscape mosaic. Ecoregion. National hierarchy of ecological units.

Chapter 3 The Question of Boundary Criteria 29

Gestalt method. Map-overlay method. Multivariate clustering method. Digital-image processing method. Controlling factors method. Analysis of controlling factors.

Chapter 4	Role of Climate in Ecosystem Differentiation	41
	Hydrologic cycle. Landforms and erosion cycles. Life cycles. Fire regimes. Plant productivity. Litter and decomposition. Controls over the climatic effect and scale.	
Chapter 5	Macroscale: Macroclimatic Differentiation (Ecoregions)	53
	Causes of ecoregion pattern. Latitude. Continental position. Elevation. Macroclimatic differentiation in review.	
Chapter 6	Ecoclimatic Zones of the Earth	83
	Criteria used in delineating ecoregion levels. The domains. The provinces. Ecoregion maps. Ecoregion boundaries. Local contrasts within zones. Relationship to other ecoregional zoning systems.	
Chapter 7	Ecoregions of the United States	93
	100 Polar domain. 200 Humid temperate domain. 300 Dry domain. 400 Humid tropical domain. Mountains with altitudinal zonation. American ecoregions in review.	
Chapter 8	Ecoregion Redistribution Under Climate Change	115
	Long-term climate change. Use of the Köppen climate classification to detect climate change. Summary.	
Chapter 9	Mesoscale: Landform Differentiation (Landscape Mosaics)	127
	Causes of landscape mosaic pattern. Principal landform classes. Geologic substratum. Levels of landform differentiation. Landforms in review.	

Chapter 10 Microscale: Edaphic-Topoclimatic Differentiation (Sites) 145

Causes of site pattern. Slope-aspect and ground conditions.
Geologic differentiation. Topoclimate-soil moisture
ecoclimatic grid. Human influences on ecosystems
and present-day systems.

Chapter 11 Applications of Ecosystem Geography 169

Determining the mapping units. Relationships. Examples of
useful correlations and applications. Significance to ecosystem
management. Significance to research. Conclusion.

Chapter 12 Summary and Conclusions 195

Mapping criteria. Boundaries. Management hierarchies and
ecosystem hierarchies. Human dimensions. Ecosystem
services.

Appendix Ecoregions of the Oceans 203

Polar domain. Temperate domain. Tropical domain.
Shelf.

Glossary 207
