Preface	v
1 The Sun	1
1.1 The Solar Structure.....	1
1.2 The Photosphere	3
1.2.1 The Solar Spectrum	3
1.2.2 Limb Darkening and Optical Depth.....	5
1.2.3 Granulation	7
1.2.4 Sunspots	8
1.2.5 Faculae	13
1.3 Observing the Solar Surface.....	14
1.3.1 Telescope Basics	15
1.3.2 Image Formation of Extended Objects	16
1.3.3 Telescope Aberrations.....	21
1.3.4 Atmospheric Seeing.....	23
1.4 The Chromosphere	25
1.4.1 Spectral Lines	25
1.4.2 Plages and the Chromospheric Network	27
1.4.3 Quiet Chromosphere	28
1.4.4 Prominences	28
1.5 The Corona.....	29
1.6 The Solar Wind	31
1.7 3-D Topology of the Magnetic Field.....	32
1.8 Observing the Outer Layers.....	34
1.9 Time Scales of Solar Variability	35
1.9.1 The Solar Cycle	36
1.9.2 Long-Term Variations	38
1.9.3 Flares.....	39
1.9.4 Coronal Mass Ejections	40

1.10	Solar–Terrestrial Relations	41
1.10.1	Sun – Climate	41
1.10.2	Space Weather	44
1.11	Monographs and Textbooks on Solar Physics	49
	References	51
2	Naked-Eye Sunspots	57
2.1	The Human Eye as a Detector of Light	59
2.1.1	Solar Damage to the Eye	61
2.2	Visibility Criteria	62
2.3	Naked-eye Sunspot Observations	67
2.3.1	Historical Oriental Observations	67
2.3.2	Historical Occidental Observations	73
2.3.3	Mayan and Indian Observations	78
2.3.4	Naked-Eye Observations During the Telescopic Era	79
2.3.5	Modern Observations	82
2.4	Naked-Eye Sunspots and Temporal Evolution of Solar Activity	86
2.4.1	Time Series with Naked-Eye Sunspot Observations	89
2.4.2	Solar Cycle and Giant Sunspots	93
2.4.3	High-Resolution Record	95
	References	97
3	Solar Drawings	103
3.1	Pretelescopic Instruments	103
3.1.1	The Camera Obscura	104
3.2	The Invention of the Telescope	106
3.3	First Telescopic Observations of Sunspots	108
3.3.1	Thomas Harriot (1560–1621)	108
3.3.2	Johannes Fabricius (1587–1616)	111
3.3.3	Cristoph Scheiner (1575–1650)	112
3.3.4	Galileo Galilei (1564–1642)	113
3.3.5	The Scheiner–Galileo Debate	117
3.3.6	L. Cigoli (1559–1613)	119
3.3.7	Other Observers	120
3.3.8	Instrumental Development	123
3.4	The Maunder Minimum	125
3.4.1	J. Hevelius (1611–1687)	126
3.4.2	The Paris Observers	126
3.4.3	William Derham (1657–1735)	129
3.4.4	Nicholas Bion (1652–1733)	129
3.4.5	John Flamsteed (1646–1719)	129
3.4.6	Charles Malapert (1581–1630)	131
3.4.7	G. Kirch and G. Schultz	131

3.5	The Rise of Solar Activity and the Dalton Minimum: 18th and 19th Centuries	131
3.5.1	Louis Feuillée (1660–1732)	132
3.5.2	Christian Horrebow (1718–1776)	132
3.5.3	Johann Hyeronimus Schroter (1745–1816)	133
3.5.4	Johann Caspar Staudacher (1731–ca. 1796)	133
3.5.5	William Herschel (1738–1822)	133
3.5.6	J.A. Alzate (1737–1799)	136
3.5.7	J.W. Pastorff (1767–1838)	136
3.5.8	John Herschel (1792–1871)	137
3.5.9	Temple Chevallier (1794–1873)	137
3.5.10	Frederick Howlett (1821–1908)	137
3.5.11	S.H. Schwabe (1789–1875)	138
3.6	Sunspot Drawings in the Photography Era	138
3.6.1	G. Spörer (1822–1895)	138
3.6.2	Samuel P. Langley (1834–1905)	139
3.6.3	S. Chevalier (1852–1930)	139
3.6.4	E.L. Trouvelot (1827–1895)	139
3.6.5	Stonyhurst Observatory	140
3.6.6	Gyula Fényi (1845–1927)	141
3.7	The First Granulation Drawings	143
3.8	Sunspot Fine Structures	146
3.8.1	Penumbra	146
3.8.2	Umbral Structures	147
3.8.3	Light-Bridges	147
3.9	Faculae	147
3.10	White-Light Flares	149
3.11	The Outer Layers of the Sun	150
3.12	The Influence of the Eye in Solar Drawings	152
3.12.1	Eye Aberrations	152
3.12.2	The Influence of the Brain	152
3.13	Physics from Drawings	153
3.13.1	The Wilson Effect	153
3.13.2	Solar Rotation	155
3.13.3	Sunspot Areas	159
3.14	Modern Solar Drawings	160
3.14.1	The Fraunhofer Institut “Maps of the Sun”	160
3.14.2	Potsdam	161
3.14.3	The Mt. Wilson Sunspot Drawings	162
3.14.4	Kanzelhöhe	162
3.14.5	Specola Solare Ticinese	163
3.14.6	Rome Solar Phenomena	164
3.14.7	Cartes Synoptiques and Catalogues of Filaments and Active Regions	165
	References	166

4	Solar Eclipses	175
4.1	The Basics of Solar Eclipses	175
4.1.1	Total Solar Eclipse Step by Step	179
4.1.2	Some Mathematics	181
4.1.3	Canons and Statistics	182
4.2	Historical Solar Eclipse Observations	184
4.2.1	Babylon and Greece	186
4.2.2	Mediaeval Arabic Records	189
4.2.3	Chinese Observations	192
4.2.4	From the Scientific Revolution to Photography (1450–1840)	192
4.3	Science Using Early Reports of Solar Eclipses	194
4.3.1	Chronology	195
4.3.2	The Earth's Rotation Clock	195
4.3.3	The Outer Layers of the Sun	200
4.3.4	CMEs and Comets	208
	References	211
5	The Solar Diameter and the Astronomical Unit	217
5.1	The Earth's Orbit	217
5.2	Measuring the Known World	220
5.2.1	Trigonometry	220
5.2.2	The First Measurements	220
5.3	Observing Methods of the Solar Diameter	222
5.3.1	Direct Estimation	222
5.3.2	Transits of the Sun in the Sky	227
5.3.3	Solar Eclipses	234
5.3.4	The Micrometer	236
5.3.5	The Heliometer	237
5.3.6	The Measurement of Time	239
5.4	Theoretical Background	240
5.5	Long-Term Variations	241
5.6	Planetary Transits	243
5.6.1	Orbital Motion of the Inner Planets	243
5.6.2	The Determination of the Solar Radius	247
5.6.3	The Determination of the Sun's Distance	248
5.6.4	Individual Transits	251
5.6.5	A Message from the Past Toward the Future	271
	References	272
6	Terrestrial Aurorae and Solar–Terrestrial Relations	279
6.1	Auroral Physics in Brief	279
6.1.1	Geomagnetism	279
6.1.2	Magnetosphere and Solar Wind	286
6.1.3	Geomagnetic Indices	289
6.1.4	Observing the Aurora	291

6.2	Folklore, Omen and Myths	293
6.2.1	Babylonia and the Bible	295
6.2.2	The Classical Period	298
6.3	Reports During the Last Two Millennia	301
6.3.1	Aurorae Borealis	301
6.3.2	Aurorae Australis	305
6.4	The Search for the Cause	306
6.4.1	Scientific Research on Aurorae	306
6.4.2	The Discovery of Solar–Terrestrial Relations	311
6.5	Catalogues of Aurorae Observations	312
6.5.1	Catalogues from 18th Until 20th Century	312
6.5.2	Recent Catalogues	314
6.6	Aurorae and Secular Solar Activity	316
6.6.1	Aurorae as a “Proxy” of Solar Activity	316
6.6.2	Low-Latitude Aurorae	320
6.6.3	Rieger Periodicity	322
6.7	Aurora and Great Space Weather Events	323
	References	325
7	Reconstruction of Solar Activity During the Telescopic Era	337
7.1	Wolf’s Reconstruction	338
7.1.1	Schwabe’s Discovery	338
7.1.2	The Wolf Sunspot Number	340
7.1.3	The Wolf Number in Depth	343
7.1.4	Other Sunspot Numbers	344
7.1.5	Other Solar Indices	345
7.2	The Reconstruction by Hoyt and Schatten	348
7.2.1	The Dataset	348
7.2.2	The Group Sunspot Number	349
7.2.3	Uncertainties	354
7.2.4	Group Versus Wolf Number	355
7.2.5	Some Problems	358
7.2.6	Some Unfinished Tasks	362
7.3	Improving and Finding Lost Observations	362
7.3.1	Records in Spanish and Portuguese	363
7.3.2	The Great Gap in the 1740s	365
7.3.3	The Sunspot Numbers During 1736–1739	366
7.3.4	The Hemispheric Numbers	367
7.4	Final Comments	369
	References	371
	Index	377

The Sun Recorded Through History

Vaquero, J.M.; Vázquez, M.

2009, XIV, 382 p. 225 illus., 17 illus. in color., Hardcover

ISBN: 978-0-387-92789-3
