

Contents

1	Introduction	1
1.1	The Goals of This Book	1
1.2	Dimension Reduction	3
1.3	Are Semiparametric and Nonparametric Methods Really Different from Parametric Ones?	6
2	Single-Index Models	7
2.1	Definition of a Single-Index Model of a Conditional Mean Function	7
2.2	Multiple-Index Models	10
2.3	Identification of Single-Index Models	12
2.3.1	Conditions for Identification of β and G	12
2.3.2	Identification Analysis When X Is Discrete	15
2.4	Estimating G in a Single-Index Model	17
2.5	Optimization Estimators of β	19
2.5.1	Nonlinear Least Squares	20
2.5.2	Choosing the Weight Function	25
2.5.3	Semiparametric Maximum-Likelihood Estimation of Binary-Response Models	27
2.5.4	Semiparametric Maximum-Likelihood Estimation of Other Single-Index Models	29
2.5.5	Semiparametric Rank Estimators	29
2.6	Direct Semiparametric Estimators	30
2.6.1	Average-Derivative Estimators	31
2.6.2	An Improved Average-Derivative Estimator	35
2.6.3	Direct Estimation with Discrete Covariates	37
2.6.4	One-Step Asymptotically Efficient Estimators	42
2.7	Bandwidth Selection	44
2.8	An Empirical Example	46
2.9	Single-Index Models of Conditional Quantile Functions	48

3	Nonparametric Additive Models and Semiparametric Partially Linear Models	53
3.1	Nonparametric Additive Models with Identity Link Functions	55
3.1.1	Marginal Integration	55
3.1.2	Backfitting	63
3.1.3	Two-Step, Oracle-Efficient Estimation	64
3.2	Estimation with a Nonidentity Link Function	70
3.2.1	Estimation	71
3.2.2	Bandwidth Selection	75
3.3	Estimation with an Unknown Link Function	77
3.4	Estimation of a Conditional Quantile Function	81
3.5	An Empirical Example	84
3.6	The Partially Linear Model	85
3.6.1	Identification	85
3.6.2	Estimation of β	86
3.6.3	Partially Linear Models of Conditional Quantiles	90
3.6.4	Empirical Applications	91
4	Binary-Response Models	95
4.1	Random-Coefficients Models	95
4.2	Identification	96
4.2.1	Identification Analysis When X Has Bounded Support	100
4.2.2	Identification When X Is Discrete	101
4.3	Estimation	104
4.3.1	Estimating $P(Y = 1 X = x)$	104
4.3.2	Estimating β : The Maximum-Score Estimator	105
4.3.3	Estimating β : The Smoothed Maximum-Score Estimator	108
4.4	Extensions of the Maximum-Score and Smoothed Maximum-Score Estimators	119
4.4.1	Choice-Based Samples	119
4.4.2	Panel Data	123
4.4.3	Ordered-Response Models	128
4.5	Other Estimators for Heteroskedastic Binary-Response Models	131
4.6	An Empirical Example	132
5	Statistical Inverse Problems	135
5.1	Deconvolution in a Model of Measurement Error	137
5.1.1	Rate of Convergence of the Density Estimator	138
5.1.2	Why Deconvolution Estimators Converge Slowly	141
5.1.3	Asymptotic Normality of the Density Estimator	143
5.1.4	A Monte Carlo Experiment	144
5.2	Models for Panel Data	145

5.2.1	Estimating f_U and f_ε	146
5.2.2	Large Sample Properties of $f_{n\varepsilon}$ and f_{nU}	148
5.2.3	Estimating First-Passage Times	151
5.2.4	Bias Reduction	152
5.2.5	Monte Carlo Experiments	154
5.3	Nonparametric Instrumental-Variables Estimation	156
5.3.1	Regularization Methods	164
5.4	Nonparametric Instrumental-Variables Estimation When T Is Unknown	171
5.4.1	Estimation by Tikhonov Regularization When T Is Unknown	171
5.4.2	Estimation by Series Truncation When T Is Unknown	178
5.5	Other Approaches to Nonparametric Instrumental-Variables Estimation	185
5.5.1	Nonparametric Quantile IV	185
5.5.2	Control Functions	186
5.6	An Empirical Example	187
6	Transformation Models	189
6.1	Estimation with Parametric T and Nonparametric F	190
6.1.1	Choosing the Instruments	193
6.1.2	The Box–Cox Regression Model	194
6.1.3	The Weibull Hazard Model with Unobserved Heterogeneity	196
6.2	Estimation with Nonparametric T and Parametric F	201
6.2.1	The Proportional Hazards Model	201
6.2.2	The Proportional Hazards Model with Unobserved Heterogeneity	204
6.2.3	The Case of Discrete Observations of Y	208
6.2.4	Estimating λ_0	209
6.2.5	Other Models in Which F Is Known	213
6.3	Estimation When Both T and F Are Nonparametric	215
6.3.1	Derivation of Horowitz’s Estimators of T and F	216
6.3.2	Asymptotic Properties of T_n and F_n	219
6.3.3	Chen’s Estimator of T	221
6.3.4	The Proportional Hazards Model with Unobserved Heterogeneity	223
6.4	Predicting Y Conditional on X	230
6.5	An Empirical Example	230
	Appendix: Nonparametric Density Estimation and Nonparametric Regression	233
A.1	Nonparametric Density Estimation	233
A.1.1	Density Estimation When X Is Multidimensional	237
A.1.2	Estimating Derivatives of a Density	239

A.2	Nonparametric Mean Regression	240
A.2.1	The Nadaraya–Watson Kernel Estimator	240
A.2.2	Local-Linear Mean Regression	242
A.2.3	Series Estimation of a Conditional Mean Function . . .	245
A.3	Nonparametric Quantile Regression	250
A.3.1	A Kernel-Type Estimator of $q_\alpha(x)$	250
A.3.2	Local-Linear Estimation of $q_\alpha(x)$	251
A.3.3	Series Estimation of $q_\alpha(x)$	253

Semiparametric and Nonparametric Methods in
Econometrics

Horowitz, J.L.

2009, X, 276 p., Hardcover

ISBN: 978-0-387-92869-2
