1	Virtual Testing and Its Application in Aerospace Structural	
	Parts	1
	Bahram Farahmand	
1.1	Introduction to the Virtual Testing	2
1.2	Virtual Testing Theory and Fracture Toughness	2
1.3	The Extended Griffith Theory and Fracture Toughness	3
1.4	Extension of Farahmand's Theory to Fatigue Crack	
	Growth Rate Data	6
1.4.1	The Accelerated Region and Fracture Toughness	6
1.4.2	The Paris Constants, C and n	7
1.4.3	The Threshold Value (Region I)	8
1.4.4	The da/dN Versus ΔK from Virtual Testing	
	Against Test Data	9
1.5	Application of Virtual Testing in Aerospace Industry:	
	Introduction	12
1.5.1	Background	13
1.5.2	Manufacturing Process and Plastic Deformation	
	of COPV Liner	14
1.5.3	Generating Fracture Allowables of Inconel 718	
	of COPV Liner Through Virtual Testing Technique . . .	16
1.5.4	Generating Fracture Allowables of 6061-T6	
	Aluminum Tank Through Virtual Testing Technique . .	20
1.6	Summary and Future Work	22
	Appendix	23
	References	28
2	Tools for Assessing the Damage Tolerance of Primary	
	Structural Components	29
	R. Jones and D. Peng	
2.1	Introduction	29
2.2	An Equivalent Block Method for Predicting Fatigue	
	Crack Growth	32
2.3	Fatigue Crack Growth under Variable Amplitude Loading . . .	33
2.3.1	Fatigue Crack Growth in an F/A-18 Aircraft Bulkhead	36

2.3.2	Crack Growth in Mil Annealed Ti-6AL-4V under a Fighter Spectrum	38
2.4	A Virtual Engineering Approach for Predicting the S-N Curves for 7050-T7451	40
2.4.1	Computing the Endurance Limit	41
2.5	Conclusion	41
	Appendix: Formulae for Computing the Crack Opening Stress	43
	References	44
3	Cohesive Technology Applied to the Modeling and Simulation of Fatigue Failure	47
	Spandan Maiti	
3.1	Introduction	47
3.2	Background	49
3.2.1	Models for the Prediction of Threshold Fatigue Crack Behavior	49
3.2.2	Models for the Prediction of Fatigue Crack Propagation	50
3.3	Cohesive Modeling Technique	51
3.3.1	Reversible Cohesive Model	53
3.3.2	A Bilinear Cohesive Law	54
3.3.3	A Cohesive Model Suitable for Fatigue Failure	56
3.3.4	Incorporation of Threshold Behavior	58
3.3.5	Finite Element Implementation	59
3.4	Simulation Results	61
3.4.1	Paris Curve Simulation	61
3.4.2	Prediction of Threshold Limit of Fatigue Crack Growth	65
3.4.3	Effect of σ on the Threshold Limit	66
3.4.4	Effect of Load Ratio R on Fatigue Crack Threshold	68
3.5	Conclusions	69
	References	69
4	Fatigue Damage Map as a Virtual Tool for Fatigue Damage Tolerance	73
	Chris A. Rodopoulos	
4.1	Introduction	73
4.2	The Basic Understanding of Fatigue Damage	74
4.2.1	Development of Fatigue Cracks and Fatigue Damage Stages	74
4.2.2	Stage II Fatigue Cracking	77
4.2.3	Stage I Fatigue Cracking	78
4.2.4	Stage III Fatigue Cracks	84
4.3	Fatigue Damage Map the Basic Rationale – The Navarro–de los Rios Model	85
4.3.1	Fatigue Damage Map – Defining the Stages of Fatigue Damage	89

4.3.2	Fatigue Damage Map – Defining the Propagation Rate of Fatigue Stages	97
4.4	Conclusions	101
	References	101
5	Predicting Creep and Creep/Fatigue Crack Initiation and Growth for Virtual Testing and Life Assessment of Components . .	105
	K.M. Nikbin	
5.1	Introduction	106
5.1.1	Background to Life Assessment Codes	106
5.1.2	Creep Analysis of Uncracked Bodies	107
5.1.3	Physical Models Describing Creep	108
5.1.4	Complex Stress Creep	110
5.1.5	Influence of Fatigue in Uncracked Bodies	112
5.2	Fracture Mechanics Parameters in Creep and Fatigue	113
5.2.1	Creep Parameter C^* Integral	114
5.3	Predictive Models in High-Temperature Fracture Mechanics . .	116
5.3.1	Derivation of K and C^*	116
5.3.2	Example of CCG Correlation with K and C^*	117
5.3.3	Modelling Steady-State Creep Crack Growth Rate	118
5.3.4	Transient Creep Crack Growth Modelling	121
5.3.5	Predictions of Initiation Times t_i Prior Onset of Steady Creep Crack Growth	124
5.3.6	Consideration of Crack Tip Angle in the NSW Model	125
5.3.7	The New NSW-MOD Model	126
5.3.8	Finite Element Framework	127
5.3.9	Damage Accumulation at the Crack Tip	128
5.3.10	Elevated Temperature Cyclic Crack Growth	130
5.4	Conclusions	131
5.5	Nomenclatures and Abbreviations	133
	References	134
6	Computational Approach Toward Advanced Composite Material Qualification and Structural Certification	137
	Frank Abdi, J. Surdenas, Nasir Munir, Jerry Housner, and Raju Keshavanarayana	
6.1	Overview	137
6.2	Background	138
6.2.1	FAA Durability and Damage Tolerance Certification Strategy	138
6.2.2	Damage Categories and Comparison of Analysis Methods and Test Results	139
6.2.3	FAA Building-Block Approach	148
6.2.4	Test Reduction Process	151

6.3	Computational Process for Implementing Building-Block Verification	153
6.3.1	Multiple Failure Criteria	154
6.3.2	Micro- and Macro-Composite Mechanics Analysis	156
6.3.3	Progressive Failure Micro-Mechanical Analysis	157
6.3.4	Calibration of Composite Constitutive Properties	158
6.3.5	Composite Material Validation	159
6.3.6	Material Uncertainty Analyzer (MUA)	161
6.4	Establish A- and B-Basis Allowables	163
6.4.1	Combining Limited Test Data with Progressive Failure and Probabilistic Analysis	164
6.4.2	Examples of Allowable Generation for Unnotched and Notched Composite Specimens	166
6.5	Certification by Analysis Example	171
6.6	Summary	182
	References	183
7	Modeling of Multiscale Fatigue Crack Growth: Nano/Micro and Micro/Macro Transitions	187
	G.C. Sih	
7.1	Introduction	188
7.2	Scale Implications Associated with Size Effects	190
7.2.1	Physical Laws Change with Size and Time	190
7.2.2	Surface-to-Volume Ratio as a Controlling Parameter	191
7.2.3	Strength and Toughness: Nano, Micro and Macro	192
7.3	Form Invariant of Two-Parameter Crack Growth Relation	193
7.4	Dual-Scale Fatigue Crack Growth Rate Models	194
7.4.1	Micro/Macro Formulation	196
7.4.2	Nano/Micro Formulation	197
7.5	Micro/Macro Time-Dependent Physical Parameters	198
7.5.1	Macroscopic Material Properties	198
7.5.2	Microscopic Material Properties	201
7.6	Nano/Micro Time-Dependent Physical Parameters	204
7.6.1	Nanoscopic Material Properties	205
7.6.2	Nanoscopic Fatigue Crack Growth Coefficient	207
7.7	Fatigue Crack Growth and Velocity Data	208
7.7.1	Predicted Micro/Macro Results	209
7.7.2	Predicted Nano/Micro Results	210
7.8	Validation of Nano/Micro/Macro Fatigue Crack Growth Behavior	212
7.9	Implication of Multiscaling and Future Considerations	214
