Preface	v
1. Differential Calculus	1
1.1 Differential Calculus of Scalar Functions	1
1.1.1 Directional and partial derivatives, and the differential	1
a. Directional derivatives	1
b. The differential	2
c. The gradient vector	5
d. Direction of steepest ascent	6
1.1.2 Directional derivatives and differential in coordinates	7
a. Partial derivatives	7
b. Jacobian matrix	8
c. The differential in the dual basis	8
d. The gradient vector in coordinates	9
e. The tangent plane	9
f. The orthogonal to the tangent space	10
g. The tangent map	11
h. Differentiability and blow-up	12
1.2 Differential Calculus for Vector-valued Functions	12
1.2.1 Differentiability	14
a. Jacobian matrix	14
b. The tangent space	16
1.2.2 The calculus	20
1.2.3 Differentiation of compositions	21
1.2.4 Calculus for matrix-valued maps	22
1.3 Theorems of Differential Calculus	24
1.3.1 Maps with continuous derivatives	24
a. Functions of class $C^1(A)$	24
b. Functions of class $C^1(\overline{A})$	25
c. Functions of class $C^2(A)$	26
d. Functions of classes $C^k(A)$ and $C^\infty(A)$	28
1.3.2 Mean value theorem	29
a. Scalar functions	29
b. Vector-valued functions	31
1.3.3 Taylor's formula	32
a. Taylor's formula of second order	33

b.	Taylor formulas of higher order	34
c.	Real analytic functions	36
d.	A converse of Taylor's theorem	37
1.3.4	Critical points	38
1.3.5	Some classical partial differential equations	42
1.4	Invertibility of Maps $\mathbb{R}^n \rightarrow \mathbb{R}^n$	46
1.4.1	Banach's fixed point theorem	47
1.4.2	Local invertibility	48
1.4.3	A few examples	51
1.4.4	A variational proof of the inverse function theorem	55
1.4.5	Global invertibility	56
1.5	Differential Calculus in Banach Spaces	57
1.5.1	Gâteaux and Fréchet differentials	57
a.	Gradient	59
b.	Mean value theorem	60
c.	Higher order derivatives and Taylor's formula	61
1.5.2	Local invertibility in Banach spaces	62
1.6	Exercises	62
2.	Integral Calculus	67
2.1	Lebesgue's Integral	67
2.1.1	Definitions and properties: a short summary	67
a.	Lebesgue's measure	68
b.	Measurable functions	70
c.	Lebesgue's integral	71
d.	Basic properties of Lebesgue's integral	72
e.	The integral as area of the subgraph	74
f.	Chebyshev's inequality	74
g.	Negligible sets and the integral	74
h.	Riemann integrable functions	75
2.1.2	Fubini's theorem and reduction to iterated integrals	76
2.1.3	Change of variables	78
2.1.4	Differentiation and primitives	78
2.2	Convergence Theorems	81
a.	Monotone convergence	81
b.	Dominated convergence	83
c.	Absolute continuity of the integral	86
d.	Differentiation under the integral sign	86
2.3	Mollifiers and Approximations	89
a.	C^0 -approximations and Lusin's theorem	89
b.	Mollifying in \mathbb{R}^n	91
c.	Mollifying in Ω	94
2.4	Calculus of Integrals	96
2.4.1	Calculus of multiple integrals	96
a.	Normal sets	97
b.	Rotational figures	99
c.	Changes of coordinates	100

	d. Measure of the n -dimensional ball	104
	e. Isodiametric inequality	105
	f. Euler's Γ function	106
	g. Tetrahedrons	108
2.4.2	Monte Carlo method	110
2.4.3	Differentiation under the integral sign	111
2.5	Measure and Area	114
2.5.1	Hausdorff's measures	114
2.5.2	Area formula	116
	a. Calculus of the area of a surface	119
2.5.3	The coarea formula	121
2.6	Gauss–Green Formulas	123
	a. Two simple situations	124
	b. Admissible sets	126
	c. Decomposition of unity	127
	d. Gauss–Green formulas	128
	e. Integration by parts	130
	f. The divergence theorem	130
	g. Geometrical meaning of the divergence	130
	h. Divergence and transport of volume	131
2.7	Exercises	132
3.	Curves and Differential Forms	137
3.1	Differential Forms, Vector Fields, and Work	137
	a. Vector fields and differential forms	137
	b. Curves	138
	c. Integration along a curve and work	140
3.2	Conservative Fields and Potentials	142
	a. Exact differential forms	142
3.3	Closed Forms and Irrotational Fields	145
	a. Closed forms	145
	b. Poincaré lemma	147
	c. Homotopic curves and work	148
	d. Simply connected subsets and closed forms	150
3.3.1	Pull back of a differential form	151
3.3.2	Homotopy formula	153
	a. Stokes's theorem in a square	153
	b. Homotopy formula	155
3.4	Stokes's Formula in the Plane	156
3.5	Exercises	158
4.	Holomorphic Functions	159
4.1	Functions from \mathbb{C} to \mathbb{C}	159
	a. Complex numbers	159
	b. Complex derivative	159
	c. Cauchy–Riemann equations	160
4.2	The Fundamental Theorem of Calculus on \mathbb{C}	163

	a. Line integrals	163
	b. Holomorphic primitives and line integrals	164
4.3	Fundamental Theorems about Holomorphic Functions	167
4.3.1	Goursat and Cauchy theorems	167
	a. Goursat lemma	167
	b. Elementary domains and Goursat's theorem	168
	c. Cauchy formula and power series development ...	171
4.3.2	Liouville's theorem	175
4.3.3	The unique continuation principle	176
4.3.4	Holomorphic differentials	176
	a. Winding number	178
	b. Stokes's formula and Cauchy's and Morera's theorems	179
4.4	Examples of Holomorphic Functions	180
4.4.1	Some simple functions	180
4.4.2	Inverses of holomorphic functions	182
	a. Complex logarithm	183
	b. Real powers	185
4.5	Singularities	187
	a. Removable singularities	188
	b. Poles	189
	c. Essential singularities	190
	d. Singularities at infinity	191
	e. Singular points at boundary and radius of convergence	192
	f. Laurent series development	192
4.6	Residues	195
	a. Calculus of residues	196
	b. Definite integrals by the residue method	197
	c. Sums of series by the residue method	204
	d. \mathcal{Z} -transform	208
	e. \mathcal{Z} -transform of a sequence of vectors	213
	f. Systems of recurrences and \mathcal{Z} -transform	215
4.7	Further Consequences of Cauchy's Formula	217
	a. The argument principle	217
	b. Rouché's theorem	218
	c. Maximum principle	219
	d. On the convergence of holomorphic functions ...	220
	e. Schwarz's lemma	221
	f. Open mapping and the inverse theorem	221
4.8	Biholomorphisms	222
	a. Riemann mapping theorem	223
	b. Harmonic functions and Riemann's mapping theorem	225
	c. Schwarz's and Poisson's formulas	226
	d. Hilbert's transform	227
4.9	Exercises	229

5. Surfaces and Level Sets	237
5.1 Immersed and Embedded Surfaces	237
5.1.1 Diffeomorphisms	237
a. Tangent vectors	239
5.1.2 r -dimensional surfaces in \mathbb{R}^n	241
a. Submanifolds	241
b. Immersions	241
5.1.3 Parameterizations of maximal rank	243
5.2 Implicit Function Theorem	247
5.2.1 Implicit functions	247
a. The theorem	249
b. Foliations	253
c. Submersions	257
5.2.2 Irregular level sets	258
5.3 Some Applications	259
5.3.1 Small perturbations	259
a. Quadratic systems	260
b. Nonlinear Cauchy problem	260
c. A boundary value problem	261
d. C^1 -dependence on initial data	261
5.3.2 Rectifiability theorem for vector fields	262
5.3.3 Critical points and critical values: Sard's lemma	264
5.3.4 Morse lemma	266
5.3.5 Gradient flow	267
5.3.6 Constrained critical points: the multiplier rule	268
5.3.7 Some applications	270
a. Orthogonal projection and eigenvectors	270
b. Inequalities	272
5.3.8 Lyapunov–Schmidt procedure	275
5.3.9 Maps with locally constant rank and functional dependence	279
5.4 Curvature of Curves and Surfaces	281
5.4.1 Curvature of a curve in \mathbb{R}^n	281
a. Moving frame for a planar curve	284
b. Moving frame of a curve in \mathbb{R}^3	286
5.4.2 Curvature of a submanifold of \mathbb{R}^n	288
a. First fundamental form	289
b. Second fundamental form	290
c. Curvature vector	291
d. Mean curvature vector	292
e. Curvature of surfaces of codimension one	293
f. Gradient and divergence on a surface	296
g. First variation of the area	299
h. Laplace–Beltrami operator and the mean curvature	300
i. Distance function	301
5.5 Exercises	303

6. Systems of Ordinary Differential Equations	309
6.1 Linear Systems	310
a. Linear systems of first-order ODEs	310
b. Linear systems with constant coefficients	313
c. More about linear systems	314
6.1.1 Higher-order equations	318
a. Higher-order equations and first-order systems	318
b. Homogeneous linear equations with constant coefficients	319
c. Nonhomogeneous linear ODEs	321
6.2 Stability	322
6.2.1 Critical points and linearization	322
6.2.2 Lyapunov's method	325
6.3 Poincaré–Bendixson Theorem	328
6.3.1 Limit sets and invariant sets	329
6.3.2 Poincaré–Bendixson theorem	331
6.3.3 Systems on a torus	332
6.4 Exercises	336
A. Mathematicians and Other Scientists	339
B. Bibliographical Notes	341
Index	343

Mathematical Analysis

An Introduction to Functions of Several Variables

Giaquinta, M.; Modica, G.

2009, XII, 348 p. 105 illus., Hardcover

ISBN: 978-0-8176-4509-0

A product of Birkhäuser Basel
