<b>Preface</b>	<b>xiii</b>
<b>Acknowledgments</b>	<b>xv</b>
<b>Notation</b>	<b>xvii</b>
<b>I Fundamentals</b>	<b>1</b>
<b>1 Divisibility</b>	<b>3</b>
1.1 Divisibility . . . . .	3
1.2 Prime Numbers . . . . .	9
1.3 The Greatest Common Divisor and Least Common Multiple . . .	17
1.4 Odd and Even . . . . .	27
1.5 Modular Arithmetic . . . . .	29
1.6 Chinese Remainder Theorem . . . . .	34
1.7 Numerical Systems . . . . .	36
1.7.1 Representation of Integers in an Arbitrary Base . . . . .	36
1.7.2 Divisibility Criteria in the Decimal System . . . . .	38
<b>2 Powers of Integers</b>	<b>47</b>
2.1 Perfect Squares . . . . .	47
2.2 Perfect Cubes . . . . .	56
2.3 $k$ th Powers of Integers, $k$ at least 4 . . . . .	57
<b>3 Floor Function and Fractional Part</b>	<b>61</b>
3.1 General Problems . . . . .	61
3.2 Floor Function and Integer Points . . . . .	68
3.3 A Useful Result . . . . .	73

<b>4</b>	<b>Digits of Numbers</b>	<b>77</b>
4.1	The Last Digits of a Number . . . . .	77
4.2	The Sum of the Digits of a Number . . . . .	79
4.3	Other Problems Involving Digits . . . . .	85
<b>5</b>	<b>Basic Principles in Number Theory</b>	<b>89</b>
5.1	Two Simple Principles . . . . .	89
5.1.1	Extremal Arguments . . . . .	89
5.1.2	The Pigeonhole Principle . . . . .	91
5.2	Mathematical Induction . . . . .	93
5.3	Infinite Descent . . . . .	98
5.4	Inclusion–Exclusion . . . . .	99
<b>6</b>	<b>Arithmetic Functions</b>	<b>105</b>
6.1	Multiplicative Functions . . . . .	105
6.2	Number of Divisors . . . . .	112
6.3	Sum of Divisors . . . . .	115
6.4	Euler’s Totient Function . . . . .	118
6.5	Exponent of a Prime and Legendre’s Formula . . . . .	122
<b>7</b>	<b>More on Divisibility</b>	<b>129</b>
7.1	Congruences Modulo a Prime: Fermat’s Little Theorem . . . . .	129
7.2	Euler’s Theorem . . . . .	135
7.3	The Order of an Element . . . . .	138
7.4	Wilson’s Theorem . . . . .	141
<b>8</b>	<b>Diophantine Equations</b>	<b>145</b>
8.1	Linear Diophantine Equations . . . . .	145
8.2	Quadratic Diophantine Equations . . . . .	148
8.2.1	The Pythagorean Equation . . . . .	148
8.2.2	Pell’s Equation . . . . .	151
8.2.3	Other Quadratic Equations . . . . .	157
8.3	Nonstandard Diophantine Equations . . . . .	159
8.3.1	Cubic Equations . . . . .	159
8.3.2	High-Order Polynomial Equations . . . . .	161
8.3.3	Exponential Diophantine Equations . . . . .	163
<b>9</b>	<b>Some Special Problems in Number Theory</b>	<b>167</b>
9.1	Quadratic Residues; the Legendre Symbol . . . . .	167
9.2	Special Numbers . . . . .	176
9.2.1	Fermat Numbers . . . . .	176
9.2.2	Mersenne Numbers . . . . .	178
9.2.3	Perfect Numbers . . . . .	179

9.3	Sequences of Integers . . . . .	180
9.3.1	Fibonacci and Lucas Sequences . . . . .	180
9.3.2	Problems Involving Linear Recursive Relations . . . . .	184
9.3.3	Nonstandard Sequences of Integers . . . . .	191
<b>10</b>	<b>Problems Involving Binomial Coefficients</b>	<b>197</b>
10.1	Binomial Coefficients . . . . .	197
10.2	Lucas's and Kummer's Theorems . . . . .	203
<b>11</b>	<b>Miscellaneous Problems</b>	<b>207</b>
<b>II</b>	<b>Solutions to Additional Problems</b>	<b>213</b>
<b>1</b>	<b>Divisibility</b>	<b>215</b>
1.1	Divisibility . . . . .	215
1.2	Prime Numbers . . . . .	220
1.3	The Greatest Common Divisor and Least Common Multiple . . . . .	227
1.4	Odd and Even . . . . .	231
1.5	Modular Arithmetic . . . . .	233
1.6	Chinese Remainder Theorem . . . . .	236
1.7	Numerical Systems . . . . .	238
<b>2</b>	<b>Powers of Integers</b>	<b>245</b>
2.1	Perfect Squares . . . . .	245
2.2	Perfect Cubes . . . . .	253
2.3	$k$ th Powers of Integers, $k$ at least 4 . . . . .	256
<b>3</b>	<b>Floor Function and Fractional Part</b>	<b>259</b>
3.1	General Problems . . . . .	259
3.2	Floor Function and Integer Points . . . . .	263
3.3	A Useful Result . . . . .	264
<b>4</b>	<b>Digits of Numbers</b>	<b>267</b>
4.1	The Last Digits of a Number . . . . .	267
4.2	The Sum of the Digits of a Number . . . . .	268
4.3	Other Problems Involving Digits . . . . .	272
<b>5</b>	<b>Basic Principles in Number Theory</b>	<b>275</b>
5.1	Two Simple Principles . . . . .	275
5.2	Mathematical Induction . . . . .	278
5.3	Infinite Descent . . . . .	284
5.4	Inclusion–Exclusion . . . . .	284

<b>6</b>	<b>Arithmetic Functions</b>	<b>287</b>
6.1	Multiplicative Functions . . . . .	287
6.2	Number of Divisors . . . . .	289
6.3	Sum of Divisors . . . . .	291
6.4	Euler's Totient Function . . . . .	292
6.5	Exponent of a Prime and Legendre's Formula . . . . .	294
<b>7</b>	<b>More on Divisibility</b>	<b>299</b>
7.1	Congruences Modulo a Prime: Fermat's Little Theorem . . . . .	299
7.2	Euler's Theorem . . . . .	305
7.3	The Order of an Element . . . . .	306
7.4	Wilson's Theorem . . . . .	309
<b>8</b>	<b>Diophantine Equations</b>	<b>311</b>
8.1	Linear Diophantine Equations . . . . .	311
8.2	Quadratic Diophantine Equations . . . . .	313
8.2.1	Pythagorean Equations . . . . .	313
8.2.2	Pell's Equation . . . . .	315
8.2.3	Other Quadratic Equations . . . . .	318
8.3	Nonstandard Diophantine Equations . . . . .	320
8.3.1	Cubic Equations . . . . .	320
8.3.2	High-Order Polynomial Equations . . . . .	323
8.3.3	Exponential Diophantine Equations . . . . .	325
<b>9</b>	<b>Some Special Problems in Number Theory</b>	<b>329</b>
9.1	Quadratic Residues; the Legendre Symbol . . . . .	329
9.2	Special Numbers . . . . .	332
9.2.1	Fermat Numbers . . . . .	332
9.2.2	Mersenne Numbers . . . . .	333
9.2.3	Perfect Numbers . . . . .	334
9.3	Sequences of Integers . . . . .	335
9.3.1	Fibonacci and Lucas Sequences . . . . .	335
9.3.2	Problems Involving Linear Recursive Relations . . . . .	338
9.3.3	Nonstandard Sequences of Integers . . . . .	342
<b>10</b>	<b>Problems Involving Binomial Coefficients</b>	<b>355</b>
10.1	Binomial Coefficients . . . . .	355
10.2	Lucas's and Kummer's Theorems . . . . .	360
<b>11</b>	<b>Miscellaneous Problems</b>	<b>363</b>
	<b>Glossary</b>	<b>369</b>
