

Contents

List of Tables	xiii
Notation and Conventions	xv
1 Polynomial Ideals and Their Varieties	1
1.1 Fundamental Concepts	1
1.2 The Ideal Membership Problem and Gröbner Bases	7
1.3 Basic Properties and Algorithms	24
1.4 Decomposition of Varieties	38
1.5 Notes and Complements	50
Exercises	51
2 Stability and Normal Forms	57
2.1 Lyapunov's Second Method	57
2.2 Real Normal Forms	62
2.3 Analytic and Formal Normal Forms	68
2.4 Notes and Complements	83
Exercises	84
3 The Center Problem	89
3.1 The Poincaré First Return Map and the Lyapunov Numbers	91
3.2 Complexification of Real Systems, Normal Forms, and the Center Problem	96
3.3 The Center Variety	108
3.4 Focus Quantities and Their Properties	118
3.5 Hamiltonian and Reversible Systems	128
3.6 Darboux Integrals and Integrating Factors	136
3.7 Applications: Quadratic Systems and a Family of Cubic Systems ...	147
3.8 The Center Problem for Liénard Systems	158
3.9 Notes and Complements	164
Exercises	167

4	The Isochronicity and Linearizability Problems	175
4.1	The Period Function	175
4.2	Isochronicity Through Normal Forms and Linearizability	177
4.3	The Linearizability Quantities	191
4.4	Darboux Linearization	199
4.5	Linearizable Quadratic Centers	205
4.6	Notes and Complements	208
	Exercises	209
5	Invariants of the Rotation Group	213
5.1	Properties of Invariants	214
5.2	The Symmetry Ideal and the Set of Time-Reversible Systems	229
5.3	Axes of Symmetry of a Plane System	237
5.4	Notes and Complements	244
	Exercises	245
6	Bifurcations of Limit Cycles and Critical Periods	249
6.1	Bautin's Method for Bifurcation Problems	250
6.2	The Cyclicity Problem	257
6.3	The Cyclicity of Quadratic Systems and a Family of Cubic Systems	269
6.4	Bifurcations of Critical Periods	287
6.5	Notes and Complements	299
	Exercises	301
	Appendix	307
	References	313
	Index of Notation	323
	Index	327

The Center and Cyclicity Problems
A Computational Algebra Approach

Romanovski, V.; Shafer, D.

2009, XII, 330 p. 4 illus., Softcover

ISBN: 978-0-8176-4726-1

A product of Birkhäuser Basel
