Preface	V
List of Contributors	XV
An Introduction to Data Modelling Principles in Metrology and Testing	
<i>Franco Pavese</i>	1
1 Introduction	1
2 Uncertainty components of the measurement process: Repeatability, reproducibility, accuracy	2
2.1 Basic nomenclature	3
3 The GUM approach to the measurement process: Type A and Type B components of uncertainty	8
3.1 Basic nomenclature	9
4 Other approaches to errors in the measurement process	11
4.1 The total error and its shared and specific components	12
4.2 A distinction between measurement and measurand	12
5 Data modelling in metrology and in testing for <i>intralaboratory</i> measurements	13
5.1 Repeated measurements	13
5.2 Nonrepeated measurements on the same standard within each laboratory	14
6 Data modelling in metrology and in testing for <i>interlaboratory</i> measurements (<i>intercomparisons</i>); comparison specific problems	15
6.1 Data modelling	16
6.2 Specific problems and outcomes of the <i>intercomparisons</i> , namely the MRA key comparisons	19
References	24

Probability in Metrology

<i>Giovanni B. Rossi</i>	31
1 Probability, statistics, and measurement – An historical perspective	31
1.1 The origins: Gauss, Laplace, and the theory of errors	31
1.2 Orthodox statistics	36
1.3 The Guide to the Expression of Uncertainty in Measurement	42
1.4 Issues in the contemporary debate on measurement uncertainty	44
2 Towards a probabilistic theory of measurement	55
2.1 Origin and early development of the formal theory of measurement	55
2.2 The representational theory of measurement	59
2.3 A probabilistic theory of measurement	63
3 Final remarks	67
References	69

Three Statistical Paradigms for the Assessment and Interpretation of Measurement Uncertainty

<i>William F. Guthrie, Hung-kung Liu, Andrew L. Rukhin, Blaza Toman, Jack C. M. Wang, Nien-fan Zhang</i>	71
1 Introduction	71
1.1 Notation	74
1.2 Statistical paradigms	74
1.3 Examples	76
2 Frequentist approach to uncertainty assessment	77
2.1 Basic method	77
2.2 Example 1	84
3 Bayesian paradigm for uncertainty assessment	87
3.1 Basic method	87
3.2 Example 1	89
4 Fiducial inference for uncertainty assessment	93
4.1 Basic method	93
4.2 Example 1	96
5 Example 2	100
5.1 Frequentist approach	101
5.2 Bayesian approach	104
5.3 Fiducial approach	107
6 Discussion	109
7 Chapter summary	112
References	114

Interval Computations and Interval-Related Statistical Techniques: Tools for Estimating Uncertainty of the Results of Data Processing and Indirect Measurements

<i>Vladik Kreinovich</i>	117
1 Importance of data processing and indirect measurements	117
2 Estimating uncertainty for the results of data processing and indirect measurements: An important metrological problem	119
3 Uncertainty of direct measurements: Brief description, limitations, need for overall error bounds (i.e., interval uncertainty)	119
4 Data processing and indirect measurements under interval uncertainty: The main problem of interval computations	120
5 Uniform distributions: Traditional engineering approach to interval uncertainty	121
6 Techniques for estimating the uncertainty of the results of indirect measurements in situations when the measurement errors of direct measurements are relatively small	123
7 Techniques for error estimation in the general case of interval uncertainty	127
8 Situations when, in addition to the upper bounds on the measurement error, we also have partial information about the probabilities of different error values	136
9 Final Remarks	143
References	144

Parameter Estimation Based on Least Squares

Methods

<i>Alistair B. Forbes</i>	147
1 Introduction	147
2 Model fitting in metrology	148
3 Linear least squares problems (LS)	148
3.1 Orthogonal factorisation method to determine parameter estimates	149
3.2 Minimum variance property of the least squares estimate	150
3.3 Linear Gauss–Markov problem (GM)	151
3.4 Generalised QR factorisation approach to the Gauss–Markov problem	152
3.5 Linear least squares, maximum likelihood estimation, and the posterior distribution $p(\mathbf{a} \mathbf{y})$	152
4 Nonlinear least squares (NLS)	154
4.1 The Gauss–Newton algorithm for nonlinear least squares	154
4.2 Approximate uncertainty matrix associated with \mathbf{a}_{NLS}	155
4.3 Nonlinear Gauss–Markov problem (NGM)	156
4.4 Approximate uncertainty matrix associated with \mathbf{a}_{NGM}	156
4.5 Nonlinear least squares, maximum likelihood estimation, and the posterior distribution $p(\mathbf{a} \mathbf{y})$	156

5	Exploiting structure in the uncertainty matrix	158
5.1	Structure due to common random effects, linear case	158
5.2	Structure due to common random effects, nonlinear case	160
6	Generalised distance regression (GDR)	161
6.1	Algorithms for generalised distance regression	162
6.2	Sequential quadratic programming for the footpoint parameters	164
6.3	Example application: Response and evaluation calibration curves	166
6.4	Example: GDR line	167
7	Generalised Gauss–Markov regression (GGM)	167
7.1	Structured generalised Gauss–Markov problems	168
8	Robust least squares (RLS)	169
8.1	Empirical implementation of RLS	171
8.2	One-sided RLS	171
8.3	RLS and the Huber M-estimator	172
8.4	Algorithms for robust least squares	173
9	Summary and concluding remarks	174
	References	174

Frequency and Time–Frequency Domain Analysis Tools in Measurement

Pedro M. Ramos, Raul C. Martins, Sergio Rapuano,

	<i>Pasquale Daponte</i>	177
1	Introduction	177
2	Fourier Analysis	179
3	How to use the FFT	181
3.1	Aliasing	182
3.2	Spectral leakage	182
3.3	Windowing	183
4	Example of spectral analysis application using FFT	184
5	Wavelet transform	187
6	The wavelet transform: Theoretical background and implementation	188
6.1	Continuous wavelet transform	189
6.2	Discrete time wavelet transform	193
7	Chirplet transform	199
8	Wavelet networks	201
	References	202

Data Fusion, Decision-Making, and Risk Analysis: Mathematical Tools and Techniques

Pedro S. Girão, Octavian Postolache, José M. D. Pereira 205

1	Data fusion	205
---	-----------------------	-----

1.1	Definitions, concepts, and terms of reference (terminology).	
	Processing and topological issues	206
1.2	Data fusion models and architectures	207
1.3	Data fusion techniques and algorithms	208
1.4	Applications	219
1.5	Implementing data fusion	239
2	Decision-making	242
2.1	Special decision-making tools and techniques	243
2.2	Final notes on decision-making	247
3	Risk analysis	248
	References	250

Comparing Results of Chemical Measurements: Some Basic Questions from Practice

	<i>Paul De Bièvre</i>	255
1	Introduction	255
2	Why do we compare measurement results?	256
2.1	Comparison of two measurement results in chemistry	256
2.2	Comparison of many measurement results in chemistry	265
3	Final remarks	272
	References	272

Modelling of Measurements, System Theory, and Uncertainty Evaluation

	<i>Klaus-D. Sommer</i>	275
1	Introduction to the modelling of measurements	275
1.1	Modelling tasks in uncertainty evaluation	275
1.2	Basic categories of models	276
1.3	Models for representing measurements and for evaluating the measurement uncertainty	277
2	Describing systems and signals	279
2.1	Linear time-invariant systems	280
2.2	Linearity of measuring systems	281
2.3	Nonlinear systems	282
2.4	Time-variant signals and systems	283
2.5	Description of stochastic signals	286
3	Systematic approach to the modelling of measurements	288
3.1	Standard modelling components	288
3.2	Stepwise modelling procedure	290
4	Effects of imperfectly modelled measurements	292
4.1	Disregarding nonlinearities	292
4.2	Dynamic uncertainty contributions	293
	References	297

Approaches to Data Assessment and Uncertainty**Estimation in Testing**

<i>Wolfram Bremser, Werner Hässelbarth</i>	299
1 Introduction	299
2 Assessment and combination of quantitative results	300
2.1 Univariate case: Approaches and tools for two measurements	300
2.2 Univariate case: Approaches and tools for multiple measurements	304
2.3 Multivariate case: Approaches and tools	312
3 Assessment and combination of qualitative results	319
3.1 Approaches and tools	320
3.2 Uncertainty estimation	325
4 Some final remarks	325
References	326

Monte Carlo Modeling of Randomness

<i>Alan G. Steele, Robert J. Douglas</i>	329
1 Introduction	329
1.1 Strengths of Monte Carlo methods	331
2 Distributions for uncertainty claims	332
2.1 Gaussian or Normal distributions	332
2.2 Student- <i>t</i> distributions	333
2.3 Rectangular distribution	334
2.4 U-shaped distribution	334
3 General distributions	334
3.1 General distributions by moments	334
3.2 General distributions by tables	335
3.3 Skewed general distributions	336
4 Multivariate distributions	336
4.1 Covariance: Simplifications – Type A	337
4.2 Covariance: Simplifications – Type B	337
4.3 Covariances in building measurement equations	338
4.4 Example: Covariance matrix to perturbation vector	338
5 Pseudo-random number generators	339
5.1 Underlying pseudo-random number generators	340
5.2 Compact algorithms	340
5.3 Demonstrable randomness	341
5.4 Testing with pseudo-random number generators	341
5.5 Tests of pseudo-random number generators	342
5.6 Tests on your computer	342
5.7 Tests of dynamic range	343
6 Algorithms for generating specific distributions	345
6.1 Gaussian	345
6.2 Student- <i>t</i>	346
6.3 Uniform distribution	347

6.4	U-distribution	348
6.5	General PRNG methods – for the U-distribution	349
6.6	General PRNG Methods for Tabulated Distributions	350
6.7	Choosing the number of simulated events	351
7	Examples of Monte Carlo simulation	353
7.1	Gaussian PDFs	353
7.2	Non-Gaussian PDFs and measurement equations	356
8	Monte Carlo simulation for hypothesis testing	363
8.1	Chi-squared testing of the common mean hypothesis	364
8.2	Chi-squared-like testing of the common mean hypothesis	365
8.3	Chi-squared-like testing of the agreement hypothesis	366
9	Final remarks	367
	References	368

Software Validation and Preventive Software Quality Assurance for Metrology

	<i>Norbert Greif, Dieter Richter</i>	371
1	Introduction: The risks of software in metrology	371
1.1	What is software	372
1.2	Software is different	373
1.3	Tackling software issues in metrology	376
2	Standards and guidelines related to software in metrology	376
2.1	Approaches to software quality and systematics of standards ..	377
2.2	Standards and guidelines concerning process quality	379
2.3	Standards and guidelines concerning product quality	380
2.4	Laboratory and metrology related standards and guidelines ..	383
2.5	Future work	387
3	Analytical and preventive software quality assurance	387
3.1	Product testing versus preventive quality assurance	388
3.2	Definition of testable requirements	389
3.3	Software product testing	391
3.4	Execution of software product tests	396
3.5	Process assessment and improvement	396
3.6	Future work	399
4	Software validation in metrology	399
4.1	Software-oriented interpretation of the standard ISO/IEC 17025	400
4.2	Systematisation of software requirements	400
4.3	Methods of software validation	407
5	Outlook: Towards a GUM-like validation guideline	408
	References	409

Virtual Instrumentation

	<i>Octavian Postolache, Pedro S. Girão, José M. D. Pereira</i>	413
1	Introduction	413
2	Hardware	416

2.1	Single unit based virtual instruments – Multifunction I/O boards.....	417
2.2	Multiunit based virtual instruments	422
3	Software	425
3.1	Textual programming languages	426
3.2	Graphical programming languages	433
3.3	VISA and IVI technologies	439
4	Virtual instrumentation operation	444
4.1	Virtual laboratories	444
	References	449

Internet-Enabled Metrology

	<i>Tanasko Tasić</i>	453
1	Introduction	453
2	Functionality of measuring instruments (distributed measuring systems)	455
2.1	Legal metrology applications	455
2.2	Remote operation of measuring instruments	458
3	Internet-supported metrological services	459
3.1	General metrology related services	459
3.2	Internet enabled/supported calibrations	460
3.3	Availability of specific metrological software validation services	464
4	Availability of the metrology-related data	466
5	Final Remarks	468
	References	469

DVD Content

DVD contents	473
Additional material to the chapters	473
Reports and Guidelines	473
Measurement Software	473
NIST Engineering Statistical Handbook	474
Monte Carlo Simulation	474
Statistical Software	474

Index

Data Modeling for Metrology and Testing in
Measurement Science

Pavese, F.; Forbes, A.B. (Eds.)

2009, XVIII, 486 p. 111 illus., Hardcover

ISBN: 978-0-8176-4592-2

A product of Birkhäuser Basel
