Introduction	1
1 Continuity of Set-Valued Maps	15
1.1 Limits of Sets	16
1.1.1 Definitions	16
1.1.2 The Compactness Theorem	23
1.1.3 The Duality Theorem	24
1.1.4 Convex Hull of Limits	26
1.2 Calculus of Limits	27
1.2.1 Direct Images	28
1.2.2 Inverse Images	30
1.3 Set-Valued Maps	33
1.4 Continuity of Set-Valued maps	38
1.4.1 Definitions	38
1.4.2 Generic Continuity	44
1.4.3 Example: Parametrized Set-Valued Maps . . .	46
1.4.4 Marginal Maps	48
1.5 Lower Semi-Continuity Criteria	49
2 Closed Convex Processes	55
2.1 Definitions	56
2.2 Open Mapping and Closed Graph Theorems	57
2.3 Uniform Boundedness Theorem	61
2.4 The Bipolar Theorem	62
2.5 Transposition of Closed Convex Process	67
2.6 Upper Hemicontinuous Maps	74

3	Existence and Stability of an Equilibrium	77
3.1	Ky Fan's Inequality	80
3.2	Equilibrium and Fixed Point Theorems	83
3.2.1	The Equilibrium Theorem	83
3.2.2	Fixed Point Theorems	86
3.2.3	The Leray-Schauder Theorem	89
3.3	Ekeland's Variational Principle	91
3.4	Constrained Inverse Function Theorem	93
3.4.1	Derivatives of Single-Valued Maps	93
3.4.2	Constrained Inverse Function Theorems	94
3.4.3	Pointwise Stability Conditions	101
3.4.4	Local Uniqueness	103
3.5	Monotone and Maximal Monotone Maps	104
3.5.1	Monotone Maps	104
3.5.2	Maximal Monotone Maps	106
3.5.3	Yosida Approximations	111
3.6	Eigenvectors of Closed Convex Processes	114
4	Tangent Cones	117
4.1	Tangent Cones to a Subset	121
4.1.1	Contingent Cones	121
4.1.2	Elementary Properties of Contingent Cones	125
4.1.3	Adjacent and Clarke Tangent Cones	126
4.1.4	Sleek Subsets	130
4.1.5	Limits of Contingent Cones; Finite Dimensional Case	130
4.1.6	Limits of Contingent Cones; Infinite Dimensional Case	132
4.2	Tangent Cones to Convex Sets	138
4.3	Calculus of Tangent Cones	146
4.3.1	Intersection and Inverse Image	146
4.3.2	Example: Tangent cones to subsets defined by equality and inequality constraints	150
4.3.3	Direct Image	153
4.4	Normal Cones	156
4.5	Other Tangent Cones	159
4.5.1	Convex Kernel of a Cone	159
4.5.2	Paratingent Cones	160

4.5.3	Hypertangent Cones	164
4.5.4	A Ménagerie of Tangent Cones	165
4.6	Tangent Cones to Sequences of Sets	166
4.7	Higher Order Tangent Sets	171
5	Derivatives of Set-Valued Maps	179
5.1	Contingent Derivatives	181
5.2	Adjacent and Circatangent Derivatives	189
5.2.1	Definitions and Elementary Properties	189
5.2.2	Limits of Differential Quotients	191
5.2.3	Derivatives of monotone operators	194
5.3	Chain Rules	196
5.4	Inverse Set-Valued Map Theorem	203
5.4.1	Stability and Approximation of Inclusions	203
5.4.2	Localization of Inverse Images	206
5.4.3	The Equilibrium Map	207
5.4.4	Local Injectivity	209
5.5	Qualitative Solutions	210
5.6	Higher Order Derivatives	215
6	Epiderivatives of Extended Functions	219
6.1	Contingent Epiderivatives	222
6.1.1	Extended Functions and their Epigraphs	222
6.1.2	Contingent Epiderivatives	224
6.1.3	Fermat and Ekeland Rules	232
6.1.4	Elementary Properties	234
6.2	Other Epiderivatives	236
6.2.1	Adjacent and Circatangent Epiderivatives	236
6.2.2	Other Convex Epiderivatives	240
6.3	Epidifferential Calculus	242
6.4	Generalized Gradient	248
6.4.1	Subdifferentials and Generalized Gradients	248
6.4.2	Limits of Subdifferentials and Gradients	251
6.4.3	Local Subdifferentials and Superdifferentials	252
6.4.4	Remarks	254
6.5	Convex Functions	255
6.6	Higher Order Epiderivatives	259

6.6.1	Second Order Epiderivatives of Moreau-Yosida Approximations	263
7	Graphical & Epigraphical Convergence	265
7.1	Graphical Limits	267
7.1.1	Definitions	267
7.1.2	Graphical Convergence of Closed Convex Processes	269
7.1.3	Monotone and Maximal Monotone Maps	270
7.2	Convergence Theorems	270
7.3	Epilimits	274
7.3.1	Definitions and Elementary Properties	274
7.3.2	Convergence of Infima and Minimizers	281
7.3.3	Variational Systems	284
7.4	Epilimits of Sums and Composition Products	286
7.5	Conjugate Functions of Epilimits	289
7.6	Graphical Convergence of Gradients	294
7.6.1	Convergence of Gradients of Smooth Functions	295
7.6.2	Convergence of Subdifferentials of Convex Functions	297
7.7	Asymptotic Epiderivatives	300
8	Measurability and Integration of Set-Valued Maps	303
8.1	Measurable Set-Valued Maps	306
8.2	Calculus of Measurable Maps	310
8.3	Proof of the Characterization Theorem	319
8.4	Limits of Measurable Maps and Selections	322
8.5	Tangent Cones in Lebesgue Spaces	324
8.6	Integral of Set-Valued Maps	326
8.7	Proofs of the Convexity of the Integral	333
8.7.1	Finite dimensional case	333
8.7.2	Infinite Dimensional Case	340
8.8	The Bang-Bang Principle	343
8.9	Invariant Measures & Poincaré's Recurrence Theorem	346
8.9.1	Linear Extension of Set-Valued Maps	346
8.9.2	Invariant Measures	350

9	Selections and Parametrization	353
9.1	Case of lower semicontinuous maps	355
9.2	Case of upper semicontinuous maps	358
9.3	Minimal Selection	360
9.4	The Steiner Selection	364
9.4.1	Steiner Points of Convex Compact Sets	365
9.4.2	The Intersection Lemma	369
9.4.3	Lipschitz Selections of Lipschitz Maps	372
9.5	Selections of Carathéodory maps	373
9.6	Carathéodory Parametrization	376
9.7	Measurable/Lipschitz Parametrization	379
10	Differential Inclusions	383
10.1	The Viability Theorem	387
10.1.1	Solutions to Differential Inclusions	388
10.1.2	Statements of the Viability Theorems	389
10.1.3	Viability Kernels	392
10.1.4	Viability and Equilibria	393
10.2	Applications of the Viability Theorem	394
10.2.1	Linear Differential Inclusions	395
10.2.2	Lyapunov Functions	395
10.2.3	Tracking a Differential Inclusion	398
10.3	Nonlinear Semi-Groups	399
10.4	Filippov's Theorem	400
10.5	Derivatives of the Solution Map	403
	Bibliographical Comments	411
	Bibliography	421
	Index	457

Set-Valued Analysis

Aubin, J.-P.; Frankowska, H.

2009, XXI, 461 p., Softcover

ISBN: 978-0-8176-4847-3

A product of Birkhäuser Basel
