Summary	xiii
Nomenclature	xv
1 Introduction	1
1.1 Background	1
1.2 Research Objectives	2
1.3 Outline	5
2 Subsidence Due to Hydrocarbon Production in the Netherlands	7
2.1 Geological Background	7
2.1.1 Hydrocarbon Reservoirs	7
2.1.2 The Groningen Reservoir	9
2.1.3 Reservoir Properties	9
2.1.4 Subsidence Prediction Methodologies	13
2.2 Subsidence Monitoring Using Leveling Measurements	15
2.2.1 Leveling Campaigns	15
2.2.2 Legal Guidelines	17
2.3 Geodetic Deformation Monitoring	18
2.3.1 Adjustment and Testing Procedure	18
2.3.2 Point-wise Multi-epoch Deformation Analysis	20
2.3.3 Continuous Spatio-temporal Deformation Analysis	21
2.3.4 Deformation Analysis of Subsidence Due to Gas Extraction	24
2.4 Conclusions	25
3 Persistent Scatterer InSAR	27
3.1 Interferometric Processing	27
3.1.1 Oversampling	29
3.1.2 Coregistration	30
3.1.3 Interferogram Computation	32
3.2 Persistent Scatterer Selection	32
3.2.1 Identification Methods of PS Candidates	33
3.2.2 Pseudo-calibration	35
3.3 Persistent Scatterer Phase Observations	38
3.3.1 Master Selection	38
3.3.2 Double-difference Observations	40
3.4 PSI Estimation	41
3.4.1 Functional Model	41
3.4.2 Integer Least-Squares Estimation	43
3.4.3 Stochastic Model	46
3.4.4 DePSI Estimation Strategy	48
3.5 Conclusions	49

4	Quality Control	51
4.1	Precision and Reliability in PSI	51
4.2	Influence of Imperfections in the Functional Model	52
4.2.1	Sub-pixel Position	53
4.2.2	Sidelobe Observations	54
4.2.3	Orbital Inaccuracies	56
4.2.4	Phase Unwrapping in the Presence of Atmospheric Disturbances	57
4.3	Imperfections in the Stochastic Model	59
4.3.1	Measurement Precision	60
4.3.2	Separation of Unmodeled Deformation and Atmospheric Signal	60
4.3.3	Possibilities and Limitations of Variance Component Estimation	62
4.3.4	Dilution of Precision	64
4.4	Measurement Precision	67
4.4.1	Leveling Precision	68
4.4.2	InSAR A-priori Measurement Precision	69
4.4.3	InSAR and Leveling Double-Difference Displacements	71
4.4.4	Validation of the Stochastic Model	73
4.4.5	InSAR A-posteriori Precision	74
4.5	Idealization Precision for Deformation Monitoring	76
4.5.1	Deformation Regimes	77
4.5.2	PS Characterization	78
4.5.3	The Use of A-priori Knowledge on the Deformation Signal	86
4.6	Conclusions	92
5	Multi-track PSI	95
5.1	Single-Track Datum Connection	96
5.2	Multi-track Datum Connection	98
5.2.1	Unified Radar Datum	98
5.2.2	Connection of PSI Estimates	104
5.2.3	Spatial Trends	109
5.3	Decomposition of Line of Sight Deformation	110
5.3.1	System of Equations	110
5.3.2	Quadtree Decomposition	111
5.4	Conclusions	111
6	PSI Subsidence Monitoring in Groningen	113
6.1	InSAR Processing Strategy	113
6.1.1	Data Coverage and Master Selection	113
6.1.2	Generation of Interferograms	118
6.1.3	DePSI	120
6.2	ERS and Envisat PSI Results	124
6.2.1	ERS Deformation Estimates	124
6.2.2	Envisat Deformation Estimates	128

6.3	Quality Control	129
6.3.1	Precision of PSI Estimates	130
6.3.2	Unmodeled Residual Components	133
6.4	Multi-track Analysis	141
6.4.1	Datum Connection	141
6.4.2	Displacement Vector Decomposition	145
6.5	Idealization Precision for Deformation Monitoring	147
6.5.1	Identification of Deformation Regimes	148
6.5.2	Shallow and Deep Subsurface Movements in Groningen	153
6.5.3	PS Characterization	155
6.5.4	On the Use of A-priori Knowledge on the Deformation Signal	162
6.6	Conclusions	166
7	Cross-Validation and Operational Implementation	167
7.1	Precision and Spatio-Temporal Observation Frequency	167
7.1.1	PSI and Leveling Deformation Estimates	167
7.1.2	Setup for the Evaluation of Spatio-Temporal Sampling	169
7.1.3	Temporal Sampling	170
7.1.4	Spatial Sampling	173
7.2	Comparison of PSI and Leveling Deformation Estimates	179
7.2.1	Parameterization of the Agreement between PSI and Leveling	181
7.2.2	PSI and Leveling Displacement Rates	184
7.2.3	PSI and Leveling Displacements	189
7.3	The Integration of Geodetic Measurement Techniques	193
7.3.1	Mathematical Model	194
7.3.2	The Integration of Leveling and PSI	195
7.4	Conclusions	197
8	Discussion and Future Subsidence Monitoring	199
8.1	Precision and Reliability	199
8.2	Separation of Deformation Regimes	201
8.3	PSI and Reservoir Behavior	203
8.3.1	Temporal Behavior of Subsidence Due to Gas Extraction	203
8.3.2	Spatial Behavior of Subsidence Due to Gas Extraction	207
8.4	Future Subsidence Monitoring	207
9	Conclusions and Recommendations	211
9.1	Conclusions	211
9.1.1	PS Density	212
9.1.2	Precision	212
9.1.3	Reliability	213
9.1.4	Deformation Regimes	214
9.1.5	Cross-Validation PSI and Leveling	215

9.1.6	Hydrocarbon Reservoir Behavior	215
9.1.7	Outlook	216
9.2	Contributions	216
9.3	Recommendations	217
Appendix 1 Location of Research Areas		219
Appendix 2 PSI and Leveling Displacement Profiles		221
A2.1	PSI (Track 380,487) and Leveling (Free Network Adjustments) . .	221
A2.2	PSI (Track 380,487) and Leveling (SuMo Analysis)	223
Bibliography		231
About the Author		239
Index		241

Satellite Radar Interferometry
Subsidence Monitoring Techniques

Ketelaar, V.B.H.G.

2009, XVI, 244 p. 139 illus., 46 illus. in color., Hardcover
