Preface	vii
Acknowledgements	xvii

Part I Quantum and Classical Probability

1 Quantum Mechanics: Postulates and Interpretations	3
1.1 Quantum Mechanics	3
1.1.1 Mathematical Basis	3
1.1.2 Postulates	5
1.2 Projection Postulate, Collapse of Wave Function, Schrödinger's Cat	11
1.2.1 Von Neumann's Projection Postulate	12
1.2.2 Collapse of Wave Function	12
1.2.3 Schrödinger's Cat	13
1.2.4 Lüders Projection Postulate	14
1.3 Statistical Mixtures	15
1.4 Von Neumann's and Lüders' Postulates for Mixed States	17
1.5 Conditional Probability	21
1.6 Derivation of Interference of Probabilities	23

2	Classical Probability Theories	27
2.1	Kolmogorov Measure-Theoretic Model	28
2.1.1	Formalism	28
2.1.2	Discussion	31
2.2	Von Mises Frequency Model	33
2.2.1	Collective (Random Sequence)	33
2.2.2	Difficulties with Definition of Randomness	34
2.2.3	S -Sequences	36
2.2.4	Operations for Collectives	36
2.3	Combining and Independence of Collectives	41

Part II Contextual Probability and Quantum-Like Models

3	Contextual Probability and Interference	47
3.1	Växjö Model: Contextual Probability	49
3.1.1	Contexts	49
3.1.2	Observables	49
3.1.3	Contextual Probability Space and Model	50
3.1.4	Växjö Models Induced by the Kolmogorov Model	53
3.1.5	Växjö Models Induced by the Quantum Model	55
3.1.6	Växjö Models Induced by the von Mises Model	56
3.2	Contextual Probabilistic Description of Double Slit Experiment	57
3.3	Formula of Total Probability and Measures of Supplementarity	59
3.4	Supplementary Observables	62
3.5	Principle of Supplementarity	63
3.6	Supplementarity and Kolmogorovness	64
3.6.1	Double Stochasticity as the Law of Probabilistic Balance	66
3.6.2	Probabilistically Balanced Observables	66
3.6.3	Symmetrically Conditioned Observables	69

3.7	Incompatibility, Supplemantarity and Existence of Joint Probability Distribution	70
3.7.1	Joint Probability Distribution	71
3.7.2	Compatibility and Probabilistic Compatibility	72
3.8	Interpretational Questions	74
3.8.1	Contextuality	74
3.8.2	Realism	75
3.9	Historical Remark: Comparing with Mackey's Model	76
3.10	Subjective and Contextual Probabilities in Quantum Theory	78
4	Quantum-Like Representation of Contextual Probabilistic Model ...	81
4.1	Trigonometric, Hyperbolic, and Hyper Trigonometric Contexts	82
4.2	Quantum-Like Representation Algorithm—QLRA	84
4.2.1	Probabilistic Data about Context	84
4.2.2	Construction of Complex Probabilistic Amplitudes	85
4.3	Hilbert Space Representation of b -Observable	88
4.3.1	Born's Rule	88
4.3.2	Fundamental Physical Observable: Views of De Broglie and Bohm	89
4.3.3	b -Observable as Multiplication Operator	89
4.3.4	Interference	90
4.4	Hilbert Space Representation of a -Observable	91
4.4.1	Conventional Quantum and Quantum-Like Representations .	91
4.4.2	a -Basis from Interference	92
4.4.3	Necessary and Sufficient Conditions for Born's Rule	93
4.4.4	Choice of Probabilistic Phases	95
4.4.5	Contextual Dependence of a -Basis	96

4.4.6	Existence of Quantum-Like Representation with Born's Rule for Both Reference Observables	97
4.4.7	"Pathologies"	99
4.5	Properties of Mapping of Trigonometric Contexts into Complex Amplitudes	100
4.5.1	Classical-Like Contexts	100
4.5.2	Non-Injectivity of Representation Map	101
4.6	Non-Double Stochastic Matrix: Quantum-Like Representations	101
4.7	Noncommutativity of Operators Representing Observables	104
4.8	Symmetrically Conditioned Observables	105
4.8.1	b -Selections are Trigonometric Contexts	106
4.8.2	Extension of Representation Map	109
4.9	Formalization of the Notion of Quantum-Like Representation	109
4.10	Domain of Application of Quantum-Like Representation Algorithm	113
5	Ensemble Representation of Contextual Statistical Model	115
5.1	Systems and Contexts	115
5.2	Interference of Probabilities: Ensemble Derivation	117
5.3	Classical and Nonclassical Probabilistic Behaviors	122
5.3.1	Classical Probabilistic Behavior	124
5.3.2	Quantum Probabilistic Behavior	125
5.3.3	Neither Classical nor Quantum Probabilistic Behavior	127
5.4	Hyperbolic Probabilistic Behavior	128
6	Latent Quantum-Like Structure in the Kolmogorov Model	131
6.1	Contextual Model with "Continuous Observables"	133
6.2	Interrelation of the Measure-Theoretic and Växjö Models	134
6.2.1	Measure-Theoretic Representation of the Växjö Model	134
6.2.2	Contextual Kolmogorov Model	135

6.3	Measure-Theoretic Derivation of Interference	136
6.4	Quantum-Like Representation of the Kolmogorov Model	139
6.5	Example of Quantum-Like Representation of Contextual Kolmogorovian Model	143
6.5.1	Contextual Kolmogorovian Probability Model	143
6.5.2	Quantum-Like Representation	144
6.6	Features of Quantum-Like Representation of Contextual Kolmogorov Model	148
6.7	Dispersion-Free States	150
6.8	Complex Amplitudes of Probabilities: Multi-Valued Variables	151
6.9	Växjö Models with Multi-Kolmogorovian Structure	157
7	Interference of Probabilities from Law of Large Numbers	159
7.1	Kolmogorovian Description of Quantum Measurements	160
7.2	Limit Theorems and Formula of Total Probability with Interference Term	162

Part III Bell's Inequality

8	Probabilistic Analysis of Bell's Argument	171
8.1	Measure-Theoretic Derivations of Bell-Type Inequalities	172
8.1.1	Bell's Inequality	172
8.1.2	Wigner's Inequality	173
8.1.3	Clauser-Horne-Shimony-Holt's Inequality	175
8.2	Correspondence between Classical and Quantum Statistical Models	176
8.3	Von Neumann Postulates on Classical \rightarrow Quantum Correspondence	177
8.4	Bell-Type No-Go Theorems	179
8.5	Range of Values ("Spectral") Postulate	184

8.6	Contextuality	185
8.6.1	Non-Injectivity of Classical \rightarrow Quantum Correspondence ..	186
8.6.2	Bell's Inequality and Experiment	190
8.7	Bell-Contextuality and Action at a Distance	190
9	Bell's Inequality for Conditional Probabilities	193
9.1	Measure-Theoretic Probability Models	194
9.1.1	Conventional Probability Model and Classical Statistical Mechanics	194
9.1.2	Bell's Probability Model and Classical Statistical Mechanics	195
9.1.3	Confronting Bell's Classical Probabilistic Model and Quantum Mechanics	195
9.2	Wigner-Type Inequality for Conditional Probabilities	196
9.3	Impossibility of Classical Description of Spin of Single Electron ...	197
10	Frequency Probabilistic Analysis of Bell-Type Considerations	205
10.1	Frequency Probabilistic Description of Hidden Variables	207
10.2	Bell's Locality (Bell-Clauser-Horne Factorability) Condition	211
10.3	Chaos of Hidden Variables and Frequencies for Macro-Observables	213
10.4	Fluctuating Distributions of Hidden Variables	215
10.5	Generalized Bell's Inequality	220
10.6	Transmission of Information with the Aid of Dependent Collectives	221
11	Original EPR-Experiment: Local Realistic Model	223
11.1	Space and Arguments of Einstein, Podolsky, Rosen, and Bell	224
11.1.1	Bell's Local Realism	224
11.1.2	Einstein's Local Realism	225
11.1.3	Local Realist Representation for Quantum Spin Correlations	226
11.1.4	EPR versus Bohm and Bell	227

11.2	Bell's Theorem and Ranges of Values of Observables	228
11.3	Correlation Functions in EPR Model	229
11.4	Space-Time Dependence of Correlation Functions and Disentanglement	232
11.4.1	Modified Bell's Equation	232
11.4.2	Disentanglement	233
11.5	Role of Space-Time in EPR Argument	236

Part IV Interrelation between Classical and Quantum Probabilities

12	Discrete Time Dynamics	241
12.1	Discrete Time in Newton's Equations	243
12.2	Diffraction Pattern in a Single Slit Scattering	244
12.3	Interference in the Two-Slit Experiment for Deterministic Particles	248
12.4	Physical Interpretation of Results of Computer Simulation	253
12.5	Discrete Time Dynamics	254
12.6	Motion in Central Potential	256
12.7	Energy Levels of the Hydrogen Atom	258
12.8	Spectrum of Harmonic Oscillator	261
12.9	General Case of Arbitrary Spectrum	262
12.10	Energy Spectrum in Various Potentials	264
12.11	Discussion and Conclusion	265
13	Noncommutative Probability in Classical Disordered Systems	269
13.1	Noncommutative Probability and Time Averaging	270
13.2	Noncommutative Probability and Disordered Systems	274

14 Derivation of Schrödinger's Equation in the Contextual**Probabilistic Framework 279**

14.1 Representation of Contextual Probabilistic Dynamics in the

Complex Hilbert Space 281

14.2 Schrödinger Dynamics and Coefficients of Supplementarity 286

Part V Hyperbolic Quantum Mechanics**15 Representation of Contextual Statistical Model by Hyperbolic****Amplitudes 293**

15.1 Hyperbolic Algebra 294

15.2 Hyperbolic Version of Quantum-Like Representation Algorithm . . 297

15.2.1 Hyperbolic Probability Amplitude, Hyperbolic Born's Rule 297

15.2.2 Hyperbolic Hilbert Space 299

15.2.3 Hyperbolic Hilbert Space Representation 300

15.3 Hyperbolic Quantization 305

16 Hyperbolic Quantum Mechanics as Deformation of Conventional**Classical Mechanics 311**

16.1 On the Classical Limit of Hyperbolic Quantum Mechanics 311

16.2 Ultra-Distributions and Pseudo-Differential Operators over the

Hyperbolic Algebra 313

16.3 The Classical Limit of the Hyperbolic Quantum Field Theory 320

16.4 Hyperbolic Fermions and Hyperbolic Supersymmetry 323
