Part I Resource Allocation

1	Power Control for Wireless Networks: Conventional and QoS-Flexible Approaches	3
	F. de S. Chaves, F. R. P. Cavalcanti, R. A. de Oliveira Neto, and R. B. Santos	
1.1	Introduction	3
1.2	Models and Basic Definitions	4
1.3	Centralized Power Control	8
1.4	Distributed Power Control	11
1.5	Feasibility and Convergence Aspects of Distributed Power Control	15
1.6	Power Control for QoS-Flexible Services	18
1.7	Power Control Games	23
1.8	Prediction of Channel State Information	41
1.9	Conclusions and Topics for Future Research	46
	References	46
2	RRM Performance for GSM/EDGE Radio Access Network	51
	Y. C. B. Silva, T. F. Maciel, and F. R. P. Cavalcanti	
2.1	Introduction	51
2.2	Fundamentals of RRM in GSM/EDGE	52
2.3	Advanced Radio Resource Management for GSM/EDGE	58
2.4	Simulation and Modeling of GSM/EDGE Networks	65
2.5	RRM Performance in GSM/EDGE	71
2.6	Conclusions and Research Directions	91
	References	92
3	Performance Optimization in Practical HSPA Networks for Wireless Broadband Access	95
	M. I. J. Da Silva	
3.1	Introduction to Broadband Wireless Access	95
3.2	System Overview	96
3.3	HSDPA Performance	112

3.4	HSDPA Field Trials: Mobility Issues	118
3.5	HSUPA Results: Field Trials	119
3.6	Applications Performance over HSPA	120
3.7	Capacity Planning	134
3.8	Conclusion and Research Directions	139
	References	139
4	Congestion Control for Wireless Cellular Systems with Applications to UMTS	141
	E. B. Rodrigues, F. R. P. Cavalcanti, and S. Wänstedt	
4.1	Introduction	141
4.2	Congestion Control and QoS Management	142
4.3	Congestion Control Framework and Radio Resource Management	145
4.4	Resource-Based and QoS-Based Congestion Control	148
4.5	Resource-Based Framework for Circuit-Switched Networks	151
4.6	Case Study: WCDMA Performance with Circuit-Switched Voice	158
4.7	QoS-Based Framework for Packet-Switched Networks	165
4.8	Case Study: HSDPA Performance with VoIP and WWW Services	174
4.9	Conclusions and Research Directions	180
	References	182
5	Resource Allocation in Multiuser Multicarrier Wireless Systems with Applications to LTE	187
	W. Freitas Jr., F. R. M. Lima, R. B. Santos, and F. R. P. Cavalcanti	
5.1	Introduction	187
5.2	Scenarios for Radio Resource Allocation	189
5.3	Radio Resource Allocation Fundamental Problems	193
5.4	Optimization Problems in Multicarrier Resource Allocation	196
5.5	Optimization Tools for Multicarrier Resource Allocation Problems	199
5.6	Algorithms for Frequency Resource Assignment	208
5.7	Subcarrier Assignment in 3GPP's Long-Term Evolution (LTE)	214
5.8	Power Allocation Algorithms and Performance in OFDMA	221
5.9	Conclusions and Research Directions	228
	References	229
6	Common RRM for Multiaccess Wireless Networks	233
	A. P. da Silva, L. S. Cardoso, V. A. de Sousa Jr., and F. R. P. Cavalcanti	
6.1	Introduction	233
6.2	Multiaccess Networks	234
6.3	Common Radio Resource Management	236
6.4	Performance of Access Selection	243
6.5	Access Selection Solutions Performance in Practical Scenarios	249
6.6	Performance of Access Selection and Vertical Handover	254

6.7	Case Study: Access Selection in an UTRAN and WLAN	257
6.8	Conclusions and Research Directions	261
	References	263

Part II Transceiver Architectures

7	Strategies for Link-Level Performance Assessment in the Simulation of Wireless Systems	269
	E. M. G. Stancanelli, C. H. M. de Lima, and D. C. Moreira	
7.1	Introduction	269
7.2	Rationale for Link-Level Performance Evaluation	270
7.3	Link-Level Modeling	272
7.4	Link-Level Software Development Framework	281
7.5	Design of Link-to-System Interfaces	291
7.6	Conclusions and Research Directions	306
	References	307
8	Channel Equalization Techniques for Wireless Communications Systems	311
	C. M. Panazio, A. O. Neves, R. R. Lopes, and J. M. T. Romano	
8.1	Introduction and Motivation	311
8.2	Channel Modeling	313
8.3	Equalization Criteria and Adaptive Algorithms	314
8.4	Improving Equalization Performance Over Time Dispersive Channels	324
8.5	Equalization with Multiple Antennas	328
8.6	Turbo-equalization: Near Optimal Performance in Coded Systems	336
8.7	Conclusions	350
	References	351
9	Channel Estimation for OFDM Systems: Techniques, Algorithms, and Performance	353
	R. F. Vigelis, D. C. Moreira, and C. C. Cavalcante	
9.1	Introduction	353
9.2	OFDM Fundamentals	353
9.3	Channel Estimation for Time-Varying Channels	365
9.4	Recursive Methods	376
9.5	Channel Estimation for MIMO-OFDM Wireless Systems	381
9.6	Conclusions and Research Directions	387
	Appendix 1	388
	Appendix 2	389
	References	391

10	Link Adaptation for MIMO-OFDM Systems	393
	D. C. Moreira, W. C. Freitas Jr., C. A. de Araújo, and C. C. Cavalcante	
10.1	Introduction	393
10.2	Fundamentals of MIMO Transceiver Architectures	394
10.3	Advanced MIMO Transceiver Architectures	403
10.4	Link Adaptation in Multiple Signal Dimensions	410
10.5	Summary	416
	References	417
11	Multiuser MIMO Systems Using STFMA PARAFAC Tensor Modeling	421
	A. L. F. de Almeida, G. Favier, and J. C. M. Mota	
11.1	Introduction	421
11.2	Tensor Decompositions: A New Signal Processing Tool	424
11.3	Background on the PARAFAC Tensor Decomposition	425
11.4	Space–Time–Frequency Multiple-Access MIMO System	428
11.5	STFMA Performance with Perfect Channel Knowledge	439
11.6	PARAFAC Tensor Modeling for the STFMA System	444
11.7	Blind Detection	446
11.8	Simulation Results with Blind Detection	452
11.9	Conclusions and Research Directions	456
	References	457
12	MIMO Transceiver Design for Enhanced Performance Under Limited Feedback	463
	Í. L. J. da Silva, A. L. F. de Almeida, F. R. P. Cavalcanti, and G. Favier	
12.1	Introduction	463
12.2	Background on Limited Feedback-Based MIMO Systems	465
12.3	Channel-Adaptive Limited Feedback Beamforming Techniques	472
12.4	Linear Precoding for Spatial Multiplexing Systems	482
12.5	Linear Precoding for Space–Time-Coded Systems	491
12.6	Tensor-Based Space–Time Precoding (TSTP)	493
12.7	Conclusions and Research Directions	504
	References	505
	Index	509
