Preface to the First Edition	v
Preface to the Second Edition	vii
Notation and Symbols	xiii
Introduction	1
1 Models	1
2 The Probability Space	2
3 Independence and Conditional Probabilities	4
4 Random Variables	5
5 Expectation, Variance, and Moments	7
6 Joint Distributions and Independence	8
7 Sums of Random Variables, Covariance, Correlation	9
8 Limit Theorems	10
9 Stochastic Processes	11
10 The Contents of the Book	11
1 Multivariate Random Variables	15
1 Introduction	15
2 Functions of Random Variables	19
2.1 The Transformation Theorem	20
2.2 Many-to-One	23
3 Problems	24
2 Conditioning	31
1 Conditional Distributions	31
2 Conditional Expectation and Conditional Variance	33
3 Distributions with Random Parameters	38
4 The Bayesian Approach	43
5 Regression and Prediction	46

6	Problems	50
3	Transforms	57
1	Introduction	57
2	The Probability Generating Function	59
3	The Moment Generating Function	63
4	The Characteristic Function	70
5	Distributions with Random Parameters	77
6	Sums of a Random Number of Random Variables	79
7	Branching Processes	85
8	Problems	91
4	Order Statistics	101
1	One-Dimensional Results	101
2	The Joint Distribution of the Extremes	105
3	The Joint Distribution of the Order Statistic	109
4	Problems	113
5	The Multivariate Normal Distribution	117
1	Preliminaries from Linear Algebra	117
2	The Covariance Matrix	119
3	A First Definition	120
4	The Characteristic Function: Another Definition	123
5	The Density: A Third Definition	125
6	Conditional Distributions	127
7	Independence	130
8	Linear Transformations	131
9	Quadratic Forms and Cochran's Theorem	136
10	Problems	140
6	Convergence	147
1	Definitions	147
2	Uniqueness	150
3	Relations Between the Convergence Concepts	152
4	Convergence via Transforms	158
5	The Law of Large Numbers and the Central Limit Theorem	161
6	Convergence of Sums of Sequences of Random Variables	165
7	The Galton–Watson Process Revisited	173
8	Problems	176
7	An Outlook on Further Topics	187
1	Extensions of the Main Limit Theorems	188
1.1	The Law of Large Numbers: The Non-i.i.d. Case	188
1.2	The Central Limit Theorem: The Non-i.i.d. Case	190
1.3	Sums of Dependent Random Variables	190

2	Stable Distributions	192
3	Domains of Attraction	193
4	Uniform Integrability	196
5	An Introduction to Extreme Value Theory	199
6	Records	201
7	The Borel–Cantelli Lemmas	204
7.1	Patterns	207
7.2	Records Revisited	210
7.3	Complete Convergence	211
8	Martingales	213
9	Problems	217
8	The Poisson Process	221
1	Introduction and Definitions	221
1.1	First Definition of a Poisson Process	221
1.2	Second Definition of a Poisson Process	222
1.3	The Lack of Memory Property	226
1.4	A Third Definition of the Poisson Process	231
2	Restarted Poisson Processes	233
2.1	Fixed Times and Occurrence Times	234
2.2	More General Random Times	236
2.3	Some Further Topics	240
3	Conditioning on the Number of Occurrences in an Interval	241
4	Conditioning on Occurrence Times	245
5	Several Independent Poisson Processes	246
5.1	The Superpositioned Poisson Process	247
5.2	Where Did the First Event Occur?	250
5.3	An Extension	252
5.4	An Example	254
6	Thinning of Poisson Processes	255
7	The Compound Poisson Process	260
8	Some Further Generalizations and Remarks	261
8.1	The Poisson Process at Random Time Points	261
8.2	Poisson Processes with Random Intensities	262
8.3	The Nonhomogeneous Poisson Process	264
8.4	The Birth Process	264
8.5	The Doubly Stochastic Poisson Process	265
8.6	The Renewal Process	265
8.7	The Life Length Process	267
9	Problems	269
A	Suggestions for Further Reading	277
	References	278
B	Some Distributions and Their Characteristics	281

C Answers to Problems 287

Index 297
