
Contents

1	Introduction	1
1.1	Random, Near-Random and Stochastic	3
1.2	Reasons for Theoretical Analysis	9
1.3	Modelling with <i>Mathematica</i>	11
2	Statistical Tools and Terminology	15
2.1	Introduction	15
2.2	Discrete and Continuous Random Variables	15
2.2.1	Characterising Statistics	16
2.3	Common Probability Functions	29
2.3.1	Bernoulli Distribution	29
2.3.2	Binomial Distribution	31
2.3.3	Poisson Distribution	35
2.4	Common Probability Density Functions	37
2.4.1	Uniform Distribution	38
2.4.2	Normal Distribution	39
2.4.3	Lognormal Distribution	42
2.4.4	Exponential distribution	45
2.4.5	Gamma Distribution	46
2.5	Multivariate Distributions	49
2.5.1	Bivariate Normal Distribution	51
3	Planar Poisson Point and Line Processes	55
3.1	Introduction	55
3.2	Point Poisson Processes	55
3.2.1	Clustering	56
3.2.2	Separation of Pairs of Points	63
3.3	Poisson Line Processes	71
3.3.1	Process Intensity	73
3.3.2	Inter-crossing Distances	81

3.3.3	Statistics of Polygons	83
3.3.4	Intrinsic Correlation	94
4	Poisson Fibre Processes I: Fibre Phase	105
4.1	Introduction	105
4.2	Planar Fibre Networks	105
4.2.1	Probability of Crossing	110
4.2.2	Fractional Contact Area	115
4.2.3	Fractional Between-zones Variance	117
4.3	Layered Fibre Networks	132
4.3.1	Fractional Contact Area	132
4.3.2	In-plane Distribution of Fractional Contact Area	137
4.3.3	Intensity of Contacts	146
4.3.4	Absolute Contact States	150
5	Poisson Fibre Processes II: Void Phase	159
5.1	Introduction	159
5.2	In-plane Pore Dimensions	160
5.3	Out-of-plane Pore Dimensions	171
5.4	Porous Anisotropy	174
5.5	Tortuosity	182
5.6	Distribution of Porosity	184
5.6.1	Bivariate Normal Distribution	185
5.6.2	Implications for Network Permeability	191
6	Stochastic Departures from Randomness	195
6.1	Introduction	195
6.2	Fibre Orientation Distributions	196
6.2.1	One-parameter Cosine Distribution	196
6.2.2	von Mises Distribution	199
6.2.3	Wrapped Cauchy Distribution	201
6.2.4	Comparing Orientation Distribution Functions	202
6.2.5	Fibre Crossings	206
6.2.6	Crossing Area Distribution	211
6.2.7	Mass Distribution	216
6.3	Fibre Clumping and Dispersion	217
6.3.1	Influence on Network Parameters	222
7	Three-dimensional Networks	241
7.1	Introduction	241
7.2	Network Density	244
7.2.1	Crowding Number	246
7.3	Intensity of Contacts	248
7.4	Variance of Porosity	250

7.5 Variance of Areal Density 253

7.6 Sphere Caging 258
