

Contents

1	Introduction	1
2	Introduction to ILC: Concepts, Schematics, and Implementation	7
2.1	ILC for Linear Systems	7
2.1.1	Why ILC?	7
2.1.2	Previous Cycle Learning	8
2.1.3	Current Cycle Learning	10
2.1.4	Previous and Current Cycle Learning	11
2.1.5	Cascade ILC	12
2.1.6	Incremental Cascade ILC	14
2.2	ILC for Non-linear Systems	16
2.2.1	Global Lipschitz Continuity Condition	17
2.2.2	Identical Initialization Condition	19
2.3	Implementation Issues	22
2.3.1	Repetitive Control Tasks	22
2.3.2	Robustness and Filter Design	23
2.3.3	Sampled-data ILC	25
2.4	Conclusion	27
3	Robust Optimal ILC Design for Precision Servo: Application to an XY Table	29
3.1	Introduction	29
3.2	Modelling and Optimal Indices	32
3.2.1	Experimental Setup and Modelling	32
3.2.2	Objective Functions for Sampled-data ILC Servomechanism	33
3.3	Optimal PCL Design	35
3.4	Optimal CCL Design	37
3.5	Optimal PCCL Design	40
3.6	Robust Optimal PCCL Design	42
3.7	Conclusion	44

4	ILC for Precision Servo with Input Non-linearities: Application to a Piezo Actuator	47
4.1	Introduction	47
4.2	ILC with Input Deadzone	50
4.3	ILC with Input Saturation	53
4.4	ILC with Input Backlash	54
4.5	ILC Implementation on Piezoelectric Motor with Input Deadzone	55
4.5.1	PI Control Performance	58
4.5.2	ILC Performance	58
4.6	Conclusion	62
5	ILC for Process Temperature Control: Application to a Water-heating Plant	65
5.1	Introduction	65
5.2	Modelling the Water-heating Plant	67
5.3	Filter-based ILC	72
5.3.1	The Schematic of Filter-based ILC	72
5.3.2	Frequency-domain Convergence Analysis of Filter-based ILC	73
5.4	Temperature Control of the Water-heating Plant	76
5.4.1	Experimental Setup	76
5.4.2	Design of ILC Parameters M and γ	76
5.4.3	Filter-based ILC Results for $\gamma = 0.5$ and $M = 100$	78
5.4.4	Profile Segmentation with Feedforward Initialization	78
5.4.5	Initial Re-setting Condition	80
5.5	Conclusion	82
5.6	Appendix: The Physical Model of the Water-heating Plant	82
6	ILC with Robust Smith Compensator: Application to a Furnace Reactor	85
6.1	Introduction	85
6.2	System Description	86
6.3	ILC Algorithms with Smith Time-delay Compensator	88
6.4	ILC with Prior Knowledge of the Process	91
6.4.1	ILC with Accurate Transfer Function ($P_0 = \hat{P}_0$)	91
6.4.2	ILC with Known Upper Bound of the Time Delay	94
6.5	Illustrative Examples	95
6.5.1	Simulation Studies	95
6.5.2	Experiment of Temperature Control on a Batch Reactor	97
6.6	Conclusion	98
7	Plug-in ILC Design for Electrical Drives: Application to a PM Synchronous Motor	101
7.1	Introduction	101
7.2	PMSM Model	103

- 7.3 Analysis of Torque Pulsations 104
- 7.4 ILC Algorithms for PMSM 106
 - 7.4.1 ILC Controller Implemented in Time Domain 107
 - 7.4.2 ILC Controller Implemented in Frequency Domain 108
- 7.5 Implementation of Drive System 110
- 7.6 Experimental Results and Discussions 112
 - 7.6.1 Experimental Results 112
 - 7.6.2 Torque Pulsations Induced by the Load 116
- 7.7 Conclusion 120

- 8 ILC for Electrical Drives: Application to a Switched Reluctance Motor 121**
 - 8.1 Introduction 121
 - 8.2 Review of Earlier Studies 124
 - 8.3 Cascaded Torque Controller 124
 - 8.3.1 The TSF 125
 - 8.3.2 Proposed Torque to Current Conversion Scheme 126
 - 8.3.3 ILC-based Current Controller 128
 - 8.3.4 Analytical Torque Estimator 130
 - 8.4 Experimental Validation of the Proposed Torque Controller 132
 - 8.5 Conclusion 135

- 9 Optimal Tuning of PID Controllers Using Iterative Learning Approach 141**
 - 9.1 Introduction 141
 - 9.2 Formulation of PID Auto-tuning Problem 144
 - 9.2.1 PID Auto-tuning 144
 - 9.2.2 Performance Requirements and Objective Functions 145
 - 9.2.3 A Second-order Example 145
 - 9.3 Iterative Learning Approach 148
 - 9.3.1 Principal Idea of Iterative Learning 148
 - 9.3.2 Learning Gain Design Based on Gradient Information 150
 - 9.3.3 Iterative Searching Methods 153
 - 9.4 Comparative Studies on Benchmark Examples 154
 - 9.4.1 Comparisons Between Objective Functions 155
 - 9.4.2 Comparisons Between ILT and Existing Iterative Tuning Methods 156
 - 9.4.3 Comparisons Between ILT and Existing Auto-tuning Methods 157
 - 9.4.4 Comparisons Between Search Methods 158
 - 9.4.5 ILT for Sampled-data Systems 160
 - 9.5 Real-time Implementation 161
 - 9.5.1 Experimental Setup and Plant Modelling 161
 - 9.5.2 Application of ILT Method 162
 - 9.5.3 Experimental Results 163

9.6	Conclusion	163
9.7	Appendix	164
9.7.1	Underdamped Case	164
9.7.2	Overdamped Case	165
9.7.3	Critical-damped Case	166
10	Calibration of Micro-robot Inverse Kinematics Using Iterative Learning Approach	169
10.1	Introduction	169
10.2	Basic Idea of Iterative Learning	171
10.3	Formulation of Iterative Identifications	171
10.4	Robustness Analysis with Calibration Error	175
10.5	Example	176
10.5.1	Estimation with Accurate Calibration Sample	177
10.5.2	Estimation with Single Imperfect Factor in Calibration Sample	178
10.5.3	Estimation with Multiple Imperfect Factors in Calibration Sample	179
10.6	Conclusion	180
11	Conclusion	181
