List of Figures	xv
1 Introduction	1
1.1 Cooperative, Pliable and Robust Systems	1
1.1.1 Control Through an Intermittent Network	2
1.1.2 Cooperative Behaviors	4
1.1.3 Pliable and Robust Systems	10
1.2 Modeling of Constrained Mechanical Systems	11
1.2.1 Motion Constraints	11
1.2.2 Kinematic Model	12
1.2.3 Dynamic Model	13
1.2.4 Hamiltonian and Energy	15
1.2.5 Reduced-order Model	15
1.2.6 Underactuated Systems	17
1.3 Vehicle Models	18
1.3.1 Differential-drive Vehicle	18
1.3.2 A Car-like Vehicle	20
1.3.3 Tractor-trailer Systems	23
1.3.4 A Planar Space Robot	25
1.3.5 Newton's Model of Rigid-body Motion	26
1.3.6 Underwater Vehicle and Surface Vessel	29
1.3.7 Aerial Vehicles	31
1.3.8 Other Models	34
1.4 Control of Heterogeneous Vehicles	34
1.5 Notes and Summary	37
2 Preliminaries on Systems Theory	39
2.1 Matrix Algebra	39
2.2 Useful Theorems and Lemma	43
2.2.1 Contraction Mapping Theorem	43
2.2.2 Barbalat Lemma	44

2.2.3	Comparison Theorem	45
2.3	Lyapunov Stability Analysis	48
2.3.1	Lyapunov Direct Method	51
2.3.2	Explanations and Enhancements	54
2.3.3	Control Lyapunov Function	58
2.3.4	Lyapunov Analysis of Switching Systems	59
2.4	Stability Analysis of Linear Systems	62
2.4.1	Eigenvalue Analysis of Linear Time-invariant Systems	62
2.4.2	Stability of Linear Time-varying Systems	63
2.4.3	Lyapunov Analysis of Linear Systems	66
2.5	Controllability	69
2.6	Non-linear Design Approaches	73
2.6.1	Recursive Design	73
2.6.2	Feedback Linearization	75
2.6.3	Optimal Control	77
2.6.4	Inverse Optimality and Lyapunov Function	78
2.7	Notes and Summary	79
3	Control of Non-holonomic Systems	81
3.1	Canonical Form and Its Properties	81
3.1.1	Chained Form	82
3.1.2	Controllability	85
3.1.3	Feedback Linearization	87
3.1.4	Options of Control Design	90
3.1.5	Uniform Complete Controllability	92
3.1.6	Equivalence and Extension of Chained Form	96
3.2	Steering Control and Real-time Trajectory Planning	98
3.2.1	Navigation of Chained Systems	98
3.2.2	Path Planning in a Dynamic Environment	104
3.2.3	A Real-time and Optimized Path Planning Algorithm	109
3.3	Feedback Control of Non-holonomic Systems	116
3.3.1	Tracking Control Design	118
3.3.2	Quadratic Lyapunov Designs of Feedback Control	120
3.3.3	Other Feedback Designs	128
3.4	Control of Vehicle Systems	130
3.4.1	Formation Control	131
3.4.2	Multi-objective Reactive Control	136
3.5	Notes and Summary	147
4	Matrix Theory for Cooperative Systems	153
4.1	Non-negative Matrices and Their Properties	153
4.1.1	Reducible and Irreducible Matrices	154
4.1.2	Perron-Frobenius Theorem	155
4.1.3	Cyclic and Primitive Matrices	158

4.2	Importance of Non-negative Matrices	161
4.2.1	Geometrical Representation of Non-negative Matrices ..	165
4.2.2	Graphical Representation of Non-negative Matrices	166
4.3	M-matrices and Their Properties	167
4.3.1	Diagonal Dominance	167
4.3.2	Non-singular M-matrices	168
4.3.3	Singular M-matrices	170
4.3.4	Irreducible M-matrices	172
4.3.5	Diagonal Lyapunov Matrix	174
4.3.6	A Class of Interconnected Systems	176
4.4	Multiplicative Sequence of Row-stochastic Matrices	177
4.4.1	Convergence of Power Sequence	178
4.4.2	Convergence Measures	179
4.4.3	Sufficient Conditions on Convergence	187
4.4.4	Necessary and Sufficient Condition on Convergence ...	188
4.5	Notes and Summary	192
5	Cooperative Control of Linear Systems	195
5.1	Linear Cooperative System	195
5.1.1	Characteristics of Cooperative Systems	196
5.1.2	Cooperative Stability	198
5.1.3	A Simple Cooperative System	200
5.2	Linear Cooperative Control Design	201
5.2.1	Matrix of Sensing and Communication Network	202
5.2.2	Linear Cooperative Control	203
5.2.3	Conditions of Cooperative Controllability	206
5.2.4	Discrete Cooperative System	209
5.3	Applications of Cooperative Control	210
5.3.1	Consensus Problem	210
5.3.2	Rendezvous Problem and Vector Consensus	212
5.3.3	Hands-off Operator and Virtual Leader	212
5.3.4	Formation Control	216
5.3.5	Synchronization and Stabilization of Dynamical Systems	222
5.4	Ensuring Network Connectivity	223
5.5	Average System and Its Properties	226
5.6	Cooperative Control Lyapunov Function	229
5.6.1	Fixed Topology	230
5.6.2	Varying Topologies	237
5.7	Robustness of Cooperative Systems	238
5.8	Integral Cooperative Control Design	248
5.9	Notes and Summary	251

- 6 Cooperative Control of Non-linear Systems 253**
 - 6.1 Networked Systems with Balanced Topologies 254
 - 6.2 Networked Systems of Arbitrary Topologies 256
 - 6.2.1 A Topology-based Comparison Theorem 256
 - 6.2.2 Generalization 263
 - 6.3 Cooperative Control Design 266
 - 6.3.1 Systems of Relative Degree One 267
 - 6.3.2 Systems in the Feedback Form 270
 - 6.3.3 Affine Systems 274
 - 6.3.4 Non-affine Systems 275
 - 6.3.5 Output Cooperation 277
 - 6.4 Discrete Systems and Algorithms 278
 - 6.5 Driftless Non-holonomic Systems 281
 - 6.5.1 Output Rendezvous 281
 - 6.5.2 Vector Consensus During Constant Line Motion 285
 - 6.6 Robust Cooperative Behaviors 288
 - 6.6.1 Delayed Sensing and Communication 290
 - 6.6.2 Vehicle Cooperation in a Dynamic Environment 294
 - 6.7 Notes and Summary 296
