

Contents

1	Relevance of the Human Coronary Collateral Circulation	1
1.1	Historical Aspects.	1
1.1.1	Introduction.	1
1.1.2	First Observations of Collateral Vessels	3
1.1.3	Post-mortem Assessment.	8
1.1.4	In Vivo Assessment	20
1.2	Interspecies Differences	27
1.2.1	Introduction.	27
1.2.2	Pig Versus Dog as a Model for the Human Coronary Collateral Circulation	28
1.2.3	Extensive Interspecies Comparison of the Coronary Collateral Circulation	33
1.3	Individual Relevance	35
1.3.1	Introduction.	35
1.3.2	Collaterals and Transcoronary Ablation of Septal Hypertrophy	36
1.3.3	Coronary Collateral Steal	39
1.3.4	Risk of Coronary Restenosis and Collateral Flow.	40
1.3.5	Beneficial Effect of Collaterals on Myocardial Salvage.	41
1.4	Collective Prognostic Relevance.	46
1.4.1	Introduction.	47
1.4.2	Endpoints for Defining Prognosis and Assessment of Collateral Flow	47
1.4.3	Acute Coronary Artery Disease and Clinical Events in Relation to Collaterals	52
1.4.4	Chronic Coronary Artery Disease and Clinical Events in Relation to Collaterals	56
	Abbreviations	63
	References	64

2	Assessment of the Human Coronary Collateral Circulation	71
2.1	Theoretical Aspects in the Assessment of the Coronary Collateral Circulation.	71
2.1.1	Introduction.	72
2.1.2	Coronary Blood Flow Measurements in the Animal Model.	72
2.1.3	Structural Design and Function of the Coronary Circulation.	73
2.1.4	Signs of Developing Tolerance to Myocardial Ischaemia.	82
2.2	Non-invasive Characterization of Collaterals	89
2.2.1	Indicators for the Coronary Collateral Circulation.	89
2.2.2	The Surface Lead ECG for Estimation of the Collateral Circulation	90
2.3	The Coronary Occlusion Model.	97
2.3.1	Introduction.	98
2.3.2	Natural Occlusion Model	100
2.3.3	Artificial Occlusion Model	104
2.3.4	Angina Pectoris and ECG During Coronary Occlusion	106
2.3.5	LV Function During Coronary Occlusion	111
2.4	Angiographic Collateral Assessment	114
2.4.1	Introduction.	115
2.4.2	Angiographic Collateral Pathways	116
2.4.3	Qualitative Angiographic Methods.	119
2.4.4	Semiquantitative Angiographic Methods	123
2.4.5	Washout Collaterometry.	124
2.5	Quantitative Coronary Pressure and Doppler Sensor Measurements.	126
2.5.1	Introduction.	127
2.5.2	Determinants of Distal Coronary Occlusive Pressure	130
2.5.3	Validation of Pressure-Derived Collateral Flow Index.	131
2.5.4	Technical Considerations, Limitations, Pitfalls and Risks of Collateral Flow Index Measurements.	142
2.6	Quantitative Collateral Perfusion Measurements	149
2.6.1	Myocardial Contrast Echocardiography for Collateral Perfusion Measurement.	149
2.6.2	Relevance of Direct Coronary Pressure-Flow Measurements	153
	Abbreviations	155
	References	156

3	Pathogenesis of the Human Coronary Collateral Circulation	165
3.1	Introduction	165
3.2	Frequency Distribution of Collateral Flow in Humans	168
3.2.1	Introduction.	168
3.2.2	Prevalence of Collaterals in the Absence of CAD	169
3.2.3	Prevalence of Collaterals in Non-occlusive CAD	180
3.2.4	Prevalence of Collaterals in Occlusive CAD	184
3.3	Clinical Determinants of Collateral Flow	188
3.3.1	Introduction.	189
3.3.2	Determinants of Preformed Coronary Collaterals	191
3.3.3	Determinants of Collateral Function in CAD	196
3.4	Cellular Determinants of Collateral Flow	205
3.4.1	Introduction.	206
3.4.2	Trigger of Arteriogenesis	206
3.4.3	Endothelial Activation	209
3.4.4	The Role of Monocytes	213
3.4.5	The Role of Lymphocytes	219
3.4.6	The Role of Stem and Progenitor Cells	219
3.5	Genetic Determinants of Collateral Flow	221
3.5.1	Introduction.	221
3.5.2	Evidence from Experimental Studies	222
3.5.3	Genetic Markers of Human Coronary Collaterals	224
	Abbreviations	226
	References	228
4	Pathophysiology of the Human Coronary Collateral Circulation	235
4.1	Introduction	235
4.2	Fluid Shear Stress and Vasomotor Function	235
4.2.1	Introduction.	236
4.2.2	Limited and Adaptive Arterial Wall Shear Stress	237
4.2.3	Flow-Mediated Vascular Function in 'Native' and Collateral Arteries	242
4.3	Vascular Resistance Distribution and the Collateral Network	255
4.3.1	Introduction.	255
4.3.2	Redistribution of Blood due to Altering Microvascular Resistances	256
4.3.3	'Redistribution' of Blood due to Altering Macrovascular Resistances	265
4.4	Stimuli for Lowering Coronary Collateral Resistance	271
4.4.1	Introduction.	271
4.4.2	Neurohumoral and Pharmacological Stimuli	271
4.4.3	Single and Repetitive Bouts of Myocardial Ischaemia	281

4.5	Extracoronary Physical Determinants of Collateral Flow	286
4.5.1	Introduction.	287
4.5.2	LV Preload, Diastolic Coronary Perfusion Pressure and Heart Rate	288
4.5.3	LV Contraction	294
4.5.4	LV Afterload	296
	Abbreviations	297
	References	297
5	Therapeutic Promotion of the Human Coronary Collateral Circulation	305
5.1	Introduction	305
5.2	Angiogenic Therapy	307
5.2.1	Angiogenesis	308
5.2.2	Angiogenic Protein and Gene Delivery	310
5.2.3	Other Pharmacological Substances with Potential Angiogenic Activity	327
5.3	Arteriogenic Therapy	332
5.3.1	Arteriogenesis	333
5.3.2	Arteriogenic Substances	340
5.4	Cell-Based Promotion of the Collateral Circulation	356
5.4.1	Introduction.	357
5.4.2	Vasculogenesis	357
5.4.3	Cell-Based Therapy of Myocardial Ischaemia in Humans	360
5.5	Physical Promotion of the Collateral Circulation	364
5.5.1	Introduction.	365
5.5.2	Recurrent Increase in Cardiac Output	367
5.5.3	Prolongation of Diastole	381
5.5.4	Diastolic Perfusion Pressure Augmentation	384
5.5.5	Coronary Back Pressure Augmentation	386
5.6	Issues of Neovascularization to be Resolved	388
5.6.1	Introduction.	389
5.6.2	Arteriogenesis Versus Atherogenesis.	389
5.6.3	Neovascularization and Tumour Growth	390
5.6.4	Growth Factor Delivery Mode	391
	Abbreviations	393
	References	394
Index		409

Collateral Circulation of the Heart

Seiler, C.

2009, XVI, 450 p. 321 illus., 120 illus. in color.,

Hardcover

ISBN: 978-1-84882-341-9
