Abbreviations and Acronyms xv
List of Contributors xix

Part I Introduction

1 Introduction 3
Jun Ishikawa and Katsuhisa Furuta
1.1 The Anti-personnel Landmine Problem, Existing Demining Technologies and Operating Procedures 3
1.2 Japanese Action for Humanitarian Demining 7
 1.2.1 Short-term R&D Project 8
 1.2.2 Mid-term R&D Project 13
References 15

Part II Dual Sensor Systems Ground Penetrating Radar and Metal Detectors

2 Principles of Mine Detection by Ground-penetrating Radar 19
Motoyuki Sato
2.1 Introduction 19
2.2 GPR Principles 19
 2.2.1 Electromagnetic Wave Propagation in Soil 19
 2.2.2 Reflection of Electromagnetic Waves from Land Mines 20
 2.2.3 Clutter 23
2.3 GPR Survey 24
 2.3.1 Operation Frequency 24
 2.3.2 GPR System 26
 2.3.3 Signal Processing 26
References 26

3	Development of Dual Sensors and Deployment in Mine Affected Countries	27
	<i>Motoyuki Sato and Kazunori Takahashi</i>	
3.1	Introduction.....	27
3.2	ALIS	28
3.2.1	ALIS Configuration and GPR	28
3.2.2	Sensor Head.....	29
3.2.3	Sensor Tracking System	29
3.2.4	Data Processing and Display	31
3.2.5	ALIS Operation	33
3.3	Evaluation Test of ALIS	33
3.3.1	ALIS Evaluation Before 2006	33
3.3.2	Test Lane Trial in Cambodia, 2006	36
3.3.3	Test Lane Trial in Croatia, 2007.....	38
3.3.4	Quality Control Test in Mine-fields in Croatia, 2006--2007	40
3.4	Buggy-Mounted System	42
3.5	ALIS-EMI.....	42
3.6	Summary.....	43
	References.....	44
4	Development of an Array Antenna Landmine Detection Radar System	45
	<i>Yoshiyuki Tomizawa, Ikuo Arai and Shinji Gotoh</i>	
4.1	Introduction.....	45
4.2	Anti-personnel Landmine Detection Radar Using an Array Antenna	46
4.2.1	Radar Waveform	46
4.2.2	Development of the Wideband Antenna.....	47
4.2.3	Creating an Antenna Array.....	48
4.2.4	Development of the Ultra-compact Impulse Radar	48
4.2.5	Architecture of the Landmine Detection Radar	49
4.3	Prototype.....	50
4.4	Detection Tests	52
4.4.1	Single Antenna Laboratory Testing.....	52
4.4.2	Array Antenna Laboratory Testing.....	53
4.4.3	Evaluation Testing in Japan.....	54
4.4.4	International Evaluation Testing.....	55
4.5	Scan-image Improvements	56
4.5.1	Effects of Ground Surface Unevenness	56
4.5.2	Improving Identification Accuracy Through Super-resolution Signal Processing.....	57
4.5.3	Applying MUSIC Processing to Pulse Radar	58
4.6	Reducing the Size and Weight of the Array Antenna Landmine Detection Radar	60
4.6.1	Size and Weight of the Antenna	60
4.6.2	Increasing Data Acquisition Speed.....	60
4.7	Installation on a Gryphon All-terrain Vehicle	61
4.8	Summary.....	61
	References.....	62

5 Test and Evaluation of Japanese GPR-EMI Dual Sensor Systems at the Benkovac Test Site in Croatia.....	63
<i>Jun Ishikawa, Katsuhisa Furuta and Nikola Pavković</i>	
5.1 Introduction.....	63
5.2 Test and Evaluation Overview.....	64
5.2.1 Benkovac Test Site.....	65
5.2.2 Four Devices to Be Evaluated.....	66
5.3 Test and Evaluation Plan.....	67
5.3.1 Experimental Design.....	67
5.3.2 Trial Procedures.....	70
5.3.3 Evaluation Method.....	70
5.4 Experimental Results.....	74
5.4.1 ANOVA Results.....	74
5.4.2 Probability of Detection.....	76
5.4.3 ROC Curves and the Role of GPR.....	77
5.5 Summary.....	79
Acknowledgments.....	79
References.....	79
Annex 5.1 Comprehensive Result of Probability of Detection (PD).....	80

Part III Vehicle Systems Based on Advanced Robotics for Humanitarian Demining

6 Environment-adaptive Anti-personnel Mine Detection System: Advanced Mine Sweeper.....	85
<i>Toshio Fukuda, Yasuhisa Hasegawa, Kazuhiro Kosuge, Kiyoshi Komoriya, Fumihisa Kitagawa and Tomohiro Ikegami</i>	
6.1 Introduction.....	86
6.2 System Architecture.....	87
6.3 Sensing Technology.....	89
6.3.1 Integrated Sensor.....	89
6.3.2 Signal Processing for Geography-adaptive Sensing.....	91
6.4 Access-control Technology.....	91
6.4.1 Sensor Manipulation System.....	91
6.4.2 Sensing Vehicle.....	93
6.4.3 Access Vehicle.....	95
6.4.4 Assist Vehicle.....	96
6.5 Information Management System.....	97
6.6 Experiments.....	98
6.7 Summary.....	100
Acknowledgments.....	100
References.....	101

7 Humanitarian Demining Operation Using the Teleoperated Buggy Vehicle Gryphon with a Mine Sensors Equipped Arm	103
<i>Edwardo F. Fukushima and Shigeo Hirose</i>	
7.1 Introduction	103
7.2 System Details	105
7.2.1 Mobile Platform	105
7.2.2 Manipulator Arm	107
7.2.3 Stereo Vision Camera	107
7.2.4 Marking System	108
7.2.5 Control Box	109
7.2.6 Mine Sensors	109
7.3 Field Tests	111
7.3.1 Consistency of Mechanized Sensor Scanning	111
7.3.2 Improved Methodology for Evaluating Metal Detector Sensor Images	113
7.4 Objective Evaluation of Robotics System for Humanitarian Demining	115
7.5 Summary	116
References	117
Annex 7.1 Procedures for Test and Evaluation	118
8 Development of Mine Detection Robot Mine Hunter Vehicle (MHV), Controlled Metal Detector and Multi-functional Hydraulic Manipulator	123
<i>Kenzo Nonami</i>	
8.1 State of the Art of Teleoperated Mine Detection by Vehicle-mounted Mine Detector	123
8.2 Concept and Implementation of Mine Hunter Vehicle (MHV)	124
8.3 Controlled Metal Detector Mounted on Mine Detection Robot	127
8.3.1 Methods of Estimating the Position of Buried Landmines	131
8.3.2 Experiments on Mine Detection	132
8.3.3 Experimental Results	133
8.4 Control and Operation of a Teleoperated and Master-slave Hydraulic Manipulator for Landmine Prodding and Excavation	137
8.4.1 Operation Strategy	139
8.4.2 Master-slave Manipulator	140
8.5 Summary	141
References	142

Part IV Explosive Sensor

9 Nuclear Quadrupole Resonance for Explosive Detection	147
<i>Hideo Itozaki</i>	
9.1 Introduction	147
9.2 Explosive Detection by NQR	147
9.3 NQR Mine Detection	150

9.4	Demonstration of NQR Mine Detection	153
9.5	Application of NQR Detector	153
9.6	Summary.....	154
	Acknowledgments	154
	References.....	155
10	Development of a High-performance Landmine Detection System Through Gamma-ray Detection by Using a Compact Fusion Neutron Source and Dual-sensors	157
	<i>Kiyoshi Yoshikawa, Kai Masuda, Teruhisa Takamatsu, Yasushi Yamamoto, Hisayuki Toku and Takeshi Fujimoto</i>	
10.1	Principle of Landmine Detection Through Nuclear Reactions	158
10.2	An Inertial-electrostatic Confinement Fusion (IECF) Neutron Source	160
10.3	Advanced Dual-sensors for Gamma-ray Diagnostics	163
10.4	Configuration of Humanitarian Landmine Detection System.....	164
10.5	Criteria for Landmine Detection	165
10.6	Landmine Imitators and Conditions for Testing	166
10.7	Test Results of Neutron-captured Gamma-rays Diagnostics	167
10.8	Test Results of Back-scattered Neutron Diagnostics	172
10.9	Summary.....	172
	Acknowledgments	173
	References.....	173
11	Development of a Compact Neutron Capture Gamma-ray Imaging System for Anti-personnel Landmine Detection	175
	<i>Tetsuo Iguchi, Jun Kawarabayashi, Ken-ichi Watanabe, Tatsuo Shoji, Tatsuya Osawa, Shinji Mihoya, Tadashi Hasegawa, Masanori Shimazaki and Toshiaki Monaka</i>	
11.1	Introduction.....	175
11.2	Compact and Intense Neutron Generator.....	176
11.3	Compact High Energy Gamma-camera	179
11.4	Principle and Algorithm for Gamma-ray Imaging.....	183
11.5	Integration of NPGA System.....	185
11.6	Performance Tests on Anti-personnel Landmine Detection	186
11.7	Summary.....	191
	Acknowledgments	192
	References.....	192
12	Development of an “Electronic Dog Nose” Based on an SPR Immunosensor for Highly Sensitive Detection of Explosives	193
	<i>Takeshi Onodera, Norio Miura, Kiyoshi Matsumoto and Kiyoshi Toko</i>	
12.1	Introduction.....	193
12.2	Odor Sensor	195
12.3	SPR Sensor	195
12.4	Antibody Production.....	197
12.5	Indirect Competitive Assay.....	199

12.6 Sampling System for Nitro Aromatic Compounds Using a Preconcentrator	201
12.7 Summary.....	204
Acknowledgments	204
References.....	204
Index	207

Anti-personnel Landmine Detection for Humanitarian
Demining

The Current Situation and Future Direction for Japanese
Research and Development

Furuta, K.; Ishikawa, J. (Eds.)

2009, XXIV, 212 p. 196 illus., 25 illus. in color.,
