Notation xv

1 Transient Operation Fundamentals..... 1

1.1 Introduction 1

1.2 Typical Transient Operation Cases 7

1.2.1 Load Increase (Acceptance) Transient Event..... 8

1.2.2 Speed Increase (Acceleration) Transient Event 17

References 22

2 Thermodynamic Aspects of Transient Operation 23

2.1 Turbocharger Lag and Transient Torque Pattern 24

2.2 Fuel Injection 38

2.2.1 Mechanical Fuel Injection 38

2.2.2 Fuel Limiter 43

2.3 In-cylinder Processes 47

2.3.1 Heat Transfer 47

2.3.2 Combustion 51

2.4 Variable Geometry Turbine 59

2.5 Exhaust Gas Recirculation 67

References 72

3 Dynamics 75

3.1 Engine Dynamics..... 75

3.1.1 Kinematics and Forces of the Slider-crank Mechanism 75

3.1.2 Crankshaft Torque Balance 82

3.1.3 Mass Moments of Inertia 84

3.2 Governor 85

3.2.1 Governor Fundamentals 85

3.2.2 Governor Equations 90

3.3 Friction 94

3.3.1 Friction Fundamentals 94

3.3.2 Development of Friction Torque during Transients 97

3.4 Crankshaft Torsional Deformation	101
3.5 Introduction to Vehicle Dynamics	105
3.5.1 Simplified Analysis	106
3.5.2 Detailed Vehicle Dynamics Study	110
References	113
4 Experimental Measurements	115
4.1 Introduction: Steady-state Test Bed Review	115
4.2 Transient Experimental Test Bed	117
4.2.1 Dynamometers	120
4.2.2 Instantaneous Measurement of Exhaust Gas and Particulate Matter	124
4.2.3 Heat Release Analysis of Transient Pressure Data	135
References	138
5 Emissions	141
5.1 Particulate Matter and Smoke	141
5.2 Nitrogen Oxides	155
5.3 Hydrocarbons	161
5.4 Carbon Monoxide	164
5.5 Non-regulated Emissions and Odor	165
5.6 Biodiesel	168
5.7 Combustion Noise	173
References	178
6 Methods of Improving Transient Response	181
6.1 Introduction	181
6.2 Type and Features of Applied Load, and the Effect of Various Dynamic and Thermodynamic Parameters	184
6.3 Air-injection	189
6.4 Turbocharger Configuration	193
6.4.1 Turbocharger Mass Moment of Inertia	194
6.4.2 Combined Supercharging	199
6.4.3 Two-stage Turbocharging	202
6.4.4 Variable Geometry Turbine	206
6.4.5 Electrically Assisted Turbocharging	209
6.4.6 Sequential Turbocharging	215
6.5 Engine Configuration	217
6.5.1 Fuel Injection Control	218
6.5.2 Valve Configuration	220
6.5.3 Manifolds Configuration	223
6.5.4 Hybrid-electric Engine and Vehicle Operation	225
References	236
7 Special Cases of Transient Operation	239
7.1 Cold Starting	239
7.1.1 Introduction	239
7.1.2 Combustion Instability	241

7.1.3 Dynamics and Friction Development.....	248
7.1.4 Exhaust Emissions	250
7.2 Compressor Surge.....	254
7.2.1 Surge Fundamentals.....	254
7.2.2 Compressor Surge during Diesel Engine Transient Operation	255
7.3 Low-heat Rejection Operation.....	261
7.3.1 Load or Speed Increase Transients	262
7.3.2 Short Term Temperature Oscillations.....	266
References	274
8 Second-law Analysis.....	277
8.1 Introduction	277
8.2 Basic Concepts of Availability	278
8.2.1 Availability of a System.....	278
8.2.2 Dead State.....	279
8.2.3 General Availability Balance Equation.....	280
8.2.4 Fuel Availability	281
8.3 Application of Exergy Balance to the Diesel Engine.....	282
8.3.1 Engine Cylinder Exergy Balance	282
8.3.2 In-cylinder Irreversibilities	284
8.3.3 Exergy Balance of the Engine Sub-systems.....	286
8.3.4 Second law or Exergy or Exergetic Efficiency	288
8.4 Exergy Balance Application to Steady-state Operation.....	290
8.5 Exergy Balance Application to Transient Operation	293
References	303
9 Modeling.....	305
9.1 Introduction	305
9.2 Quasi-linear or Mean Value Approach	309
9.2.1 Engine Output	309
9.2.2 Exhaust Gas Temperature	310
9.2.3 Engine Air-flow	311
9.2.4 Transient Discrepancies	312
9.3 Filling and Emptying Approach	313
9.3.1 Thermodynamics Fundamentals	314
9.3.2 In-cylinder Calculations.....	318
9.4 Manifolds.....	334
9.5 Multi-cylinder Engine Transient Operation.....	336
9.6 Turbocharger	337
9.7 Friction	342
9.7.1 Mean fmep Method.....	342
9.7.2 Rezeká–Henein Model.....	343
9.7.3 Account for Transient Discrepancies	346
9.8 Fuel Injection.....	346
9.9 Mechanical Governor	348
9.10 Crankshaft Torque Balance	349
9.11 Exhaust Emissions	351

9.11.1 Global Approximations.....	351
9.11.2 Nitric Oxide Formation Model.....	352
9.11.3 Soot Formation Model.....	352
9.12 Solution of Equations	353
9.13 Sensitivity Analysis	356
References	357
Appendix A – Exhaust Emission Regulations and Transient Cycles	361
A.1 Introduction.....	361
A.2 European Union (EU)	362
A.2.1 Emission Standards	362
A.2.2 Transient Cycles.....	365
A.3 United States of America	368
A.3.1 Emission Standards	368
A.3.2 Transient Cycles.....	371
A.4 Japan	375
A.4.1 Emission Standards.....	375
A.4.2 Transient Cycles.....	377
A.5 Overall: Comparative Data	379
A.6 Worldwide Heavy-duty Transient Cycle	381
References	382
Appendix B – Fundamentals of Control Theory.....	383
Index	387

Diesel Engine Transient Operation
Principles of Operation and Simulation Analysis
Rakopoulos, C.D.; Giakoumis, E.G.
2009, XX, 390 p., Hardcover
ISBN: 978-1-84882-374-7
