Abbreviations and Symbols xxi

1 Why Predictive Control? 1

1.1 “You would not drive your car using PID control” 1

1.2 Historical Context 2

1.3 Breaking with the PID Tradition 3

1.4 Impact on Industry 5

1.4.1 The Petrochemical Industry 6

1.4.2 The Defence Industry 6

1.5 Objective 6

1.5.1 Formulation 7

1.5.2 Implementation 7

1.5.3 Process 8

1.6 Predictive Control Block Diagram 8

1.7 Summary 9

2 Internal Model 11

2.1 Why Is Prediction Necessary? 11

2.2 Model Types 12

2.2.1 Realigned Model 13

2.2.2 Independent Model 13

2.3 Decomposition of Unstable or Non-asymptotically Stable Systems 15

2.3.1 Measurable Disturbance Compensation 15

2.3.2 Decomposition 16

2.4 Prediction 18

2.4.1 The Free Solution $S_L(t)$ 18

2.4.2 The Forced Solution $S_F(t)$ 19

2.5 Summary 20

3	Reference Trajectory	23
3.1	Introduction	23
3.2	Reference Trajectory	24
3.3	Pure Time Delay	26
3.4	Summary	29
4	Control Computation	31
4.1	Elementary Calculation	31
4.1.1	How to Determine Future Model Outputs	32
4.1.2	How to Structure the Future MVs	32
4.2	No Integrator?	34
4.3	Basis Functions	36
4.3.1	What MVs Are Required?	36
4.3.2	Computational Requirements	38
4.3.3	Polynomial Set-point	38
4.4	Extension	41
4.5	Implicit Regulator Calculation	41
4.6	Control of an Integrator Process	43
4.7	Feedforward Compensation	45
4.7.1	Process Without Time Delay	46
4.7.2	Process with Time Delay	49
4.7.3	Extension	50
4.8	Extension: MV Smoothing	54
4.9	Convolution Representation	56
4.10	Extension to Higher-order System Models	58
4.10.1	Real Poles	59
4.10.2	Complex Poles	59
4.10.3	Control of a Pure Oscillator	62
4.10.4	First-order Stable Process with a Stable or Unstable Zero	64
4.11	Controller Initialisation	66
4.11.1	PFC Controller Permanently Installed	66
4.11.2	PFC Commissioning Phase	68
4.12	Summary	68
5	Tuning	71
5.1	Regulator Objectives	71
5.2	Accuracy	72
5.3	Dynamics	73
5.3.1	Time Response	73
5.3.2	Frequency Response	75
5.4	Robustness	77
5.5	Choice of Tuning Parameters	79
5.5.1	Accuracy	79
5.5.2	Dynamics	80
5.5.3	Robustness	80
5.6	Gain Margin as a Function of CLTR (First-order System)	84
5.7	Tuning	85

5.7.1	Gain Margin/Delay Margin	86
5.7.2	Sensitivity Function (“Hill Curve”).....	88
5.8	The Tuner’s Rule	89
5.9	Practical Guidelines	91
5.10	Summary.....	92
6	Constraints	93
6.1	Benefit	93
6.2	MV Constraints.....	94
6.2.1	Impact of Constraints on the CLTR.....	96
6.3	Internal Variable Constraints	96
6.4	Constraint Transfer – Back Calculation	100
6.5	Summary.....	102
7	Industrial Implementation	103
7.1	Implementation	103
7.2	Zone Control	104
7.3	Cascade Control.....	107
7.4	Transparent Control	108
7.5	Shared Multi-MV Control.....	110
7.5.1	Coupled Actuators	111
7.5.2	Split-range Control	114
7.6	Estimator.....	117
7.6.1	State and Structural Disturbances	118
7.6.2	Feedforward Variable	120
7.6.3	Calibration	121
7.7	Non-linear Control	122
7.7.1	Non-linearities of the MV or CV	122
7.7.2	Non-linear Stationary Feedback	123
7.8	Scenario Method	126
7.9	2MV/2CV Control	127
7.9.1	The Problem Being Addressed	127
7.9.2	Control Computation	128
7.9.3	Constraints on the MVs	129
7.9.4	Tuning	131
7.10	Summary.....	133
8	Parametric Control.....	135
8.1	Parametric Instability	135
8.2	Heat Exchanger.....	136
8.3	Constraint Transfer in Parametric Control.....	141
8.4	Evaluation.....	143
8.5	Summary.....	144
9	Unstable Poles and Zeros	145
9.1	Complexity	145
9.2	Stable Pole and Stable Zero	147

9.3	Unstable Zero and a Stable Pole	148
9.4	Control of an Unstable, Minimum Phase Process.....	149
9.5	Control of an Unstable, Non-minimum Phase Process	150
9.5.1	Stability	152
9.5.2	Robustness.....	153
9.5.3	Tuning	155
9.6	Summary.....	156
10	Industrial Examples.....	157
10.1	Industrial Applications.....	157
10.2	Heat Exchanger.....	158
10.2.1	Problem Description	158
10.2.2	Convexity Theorem.....	159
10.2.3	Fluid/Mass Exchange	160
10.2.4	Counter-current Exchanger.....	166
10.2.5	Implementation of a First-principles Model Controller.....	167
10.3	Institut de Régulation d'Arles Exchanger	168
10.3.1	Heat-exchanger Model	168
10.3.2	Control.....	170
10.3.3	Results	172
10.4	ARCELOR.....	177
10.4.1	Continuous Casting	178
10.4.2	GV1/2 Steam Generators.....	184
10.5	EVONIK.DEGUSSA.....	197
10.6	Summary.....	200
11	Conclusions.....	201
11.1	Characteristics of PFC Control	202
11.1.1	Model.....	202
11.1.2	Reference Trajectory	202
11.1.3	Regulator	202
11.1.4	Basis Functions.....	202
11.1.5	Time and Frequency Domains.....	203
11.2	Limits of PFC Control	203
11.2.1	Multiple-Input, Multiple-Output Extension.....	203
11.2.2	Constraints.....	203
11.2.3	Effort	203
11.2.4	Risk.....	204
11.3	Final Remark	205
Appendix A	207
A.1	First-Order Process (K,T,D) in MATLAB [®] , C++ and VB	207
A.1.1	MATLAB [®]	207
A.1.2	C++.....	209
A.1.3	In Visual Basic	211
A.1.4	First-order Integrator Process	214

Appendix B	217
B.1 Calculation of Heat-Transfer Coefficient for Water.....	217
B.1.1 Time-constant Calculation	218
References	219
Index	221
