About the Author	ix
Preface	1
1 “Reflections on the motive power of fire ...”	3
Sadi Carnot	3
Caloric	4
The irreversibility of heat processes	6
What did Carnot do?	9
The Carnot cycle	11
Thermodynamic temperature	16
2 The laws of thermodynamics	19
Lomonosov and the conservation laws	19
The law of conservation of energy	21
The second law	23
The pressure of light	24
Entropy	25
The logarithm and exponential functions	27
Calculation of entropy	30
Measuring entropy experimentally	34
Irreversible processes	37
3 Entropy and free energy	41
Obtaining useful work	41
Equilibrium conditions	43
A chemical reaction	45
Melting of crystals and evaporation of liquids	48
Why does alcohol dissolve in water yet gasoline not do so?	49
Hydrophobic forces and the albumin globule	51
What do rubber and an ideal gas have in common?	53
Why do we heat a room?	57

“The mistress of the world and her shadow”	59
Why was Emden right?	60
4 Entropy and probability	63
Boltzmann’s formula	63
Stirling’s formula	66
The meaning of Boltzmann’s formula	68
The fusion of a crystal and the evaporation of a liquid	71
Entropic forces	72
Entropy of equilibrium states	76
A little quantum mechanics	78
Gibbs’ paradox	80
Nernst’s theorem	81
5 Statistics and mechanics	85
The distribution of velocities, and temperature	85
The barometric formula and the “gravitational perpetuum mobile” . . .	90
Fluctuations	93
Why is the sky blue?	98
The age of Darwin	100
Laplace’s demon and Sinai’s billiard	103
The fate of the universe	107
6 Open systems	113
The production and flow of entropy	113
The dissipation function	116
An astronaut lives on negative entropy	119
Why do cells divide?	124
Far from equilibrium	125
The Belousov–Zhabotinskii reaction	131
Organisms as dissipative systems	133
The three stages of thermodynamics	138
7 Information	141
Information and probability	141
Informational entropy	145
Information and entropy	151
Maxwell’s demon	154
Obtaining and creating information	157
The value of information	160

8 Entropy, information, life	165
The thermodynamics of living organisms	165
Biological evolution, entropy, and information	169
The value of biological information	174
Complexity and irreplaceability	181
Complexity and Gödel's theorem	185
Information and artistic creation	186
Index	197

Entropy and Information

Volkenstein, M.V.

2009, X, 210 p., Hardcover

ISBN: 978-3-0346-0077-4

A product of Birkhäuser Basel
