<b>Preface</b>	<b>xi</b>
<b>Introduction</b>	<b>xiii</b>
<b>Notation</b>	<b>xix</b>
<b>1 Elementary properties of holomorphic functions</b>	<b>1</b>
1.1 Definition and first properties . . . . .	1
1.2 The maximum principle . . . . .	3
1.3 Contour integrals . . . . .	8
1.4 The Cauchy integral theorem . . . . .	11
1.5 The Cauchy formula . . . . .	12
1.6 The Hahn-Banach criterion . . . . .	15
1.7 A criterion for the holomorphy of operator functions . . . . .	18
1.8 Power series . . . . .	19
1.9 Laurent series . . . . .	23
1.10 Isolated singularities . . . . .	25
1.11 Comments . . . . .	28
<b>2 Solution of <math>\bar{\partial}u = f</math> and applications</b>	<b>29</b>
2.1 The Pompeiu formula for solutions of $\bar{\partial}u = f$ on compact sets . .	29
2.2 Runge approximation . . . . .	37
2.3 Solution of $\bar{\partial}u = f$ on open sets . . . . .	41
2.4 $\mathcal{O}^E$ -cocycles and the Mittag-Leffler theorem . . . . .	43
2.5 Runge approximation for invertible scalar functions and the Weierstrass product theorem . . . . .	44
2.6 $\mathcal{O}^E$ -cocycles with prescribed zeros and a stronger version of the Mittag-Leffler theorem . . . . .	52
2.7 Generalization of the Weierstrass product theorem . . . . .	54
2.8 Comments . . . . .	58

<b>3</b>	<b>Splitting and factorization with respect to a contour</b>	<b>59</b>
3.1	Splitting with respect to a contour . . . . .	59
3.2	Splitting and the Cauchy Integral . . . . .	61
3.3	Hölder continuous functions split . . . . .	65
3.4	The splitting behavior of differentiable functions . . . . .	72
3.5	Approximation of Hölder continuous functions . . . . .	75
3.6	Example: A non-splitting continuous function . . . . .	77
3.7	The additive local principle . . . . .	82
3.8	Factorization of scalar functions with respect to a contour. First remarks . . . . .	84
3.9	Factorization of Hölder functions . . . . .	89
3.10	Factorization of Wiener functions . . . . .	91
3.11	The multiplicative local principle . . . . .	93
3.12	Comments . . . . .	95
<b>4</b>	<b>The Rouché theorem for operator functions</b>	<b>97</b>
4.1	Finite meromorphic Fredholm functions . . . . .	97
4.2	Invertible finite meromorphic Fredholm functions . . . . .	101
4.3	Smith factorization . . . . .	106
4.4	The Rouché theorem . . . . .	111
4.5	Comments . . . . .	112
<b>5</b>	<b>Multiplicative cocycles (<math>\mathcal{O}^G</math>-cocycles)</b>	<b>113</b>
5.1	Topological properties of $GL(E)$ . . . . .	114
5.2	Two factorization lemmas . . . . .	120
5.3	$\overline{\mathcal{O}}^E$ -cocycles . . . . .	123
5.4	Runge approximation of $G$ -valued functions. First steps . . . . .	125
5.5	The Cartan lemma . . . . .	129
5.6	$\mathcal{O}^G$ -cocycles. Definitions and statement of the main result . . . . .	131
5.7	Refinement of the covering . . . . .	133
5.8	Exhausting by compact sets . . . . .	137
5.9	Proof of the main theorem in the case of simply connected open sets . . . . .	141
5.10	Runge approximation of $G$ -valued functions. General case . . . . .	143
5.11	Proof of the main theorem in the general case . . . . .	147
5.12	$\mathcal{O}^{\mathcal{G}^\infty(E)}$ -cocycles . . . . .	151
5.13	Weierstrass theorems . . . . .	153
5.14	Weierstrass theorems for $\mathcal{G}^\infty(E)$ and $\mathcal{G}^\omega(E)$ -valued functions . . . . .	156
5.15	Comments . . . . .	157
<b>6</b>	<b>Families of subspaces</b>	<b>159</b>
6.1	The gap metric . . . . .	159
6.2	Kernel and image of operator functions . . . . .	172
6.3	Holomorphic sections of continuous families of subspaces . . . . .	184

6.4	Holomorphic families of subspaces . . . . .	185
6.5	Example: A holomorphic family of subspaces with jumping isomorphism type . . . . .	201
6.6	Injective families . . . . .	203
6.7	Shubin families . . . . .	204
6.8	Complemented families . . . . .	206
6.9	Finite dimensional and finite codimensional families . . . . .	209
6.10	One-sided and generalized invertible holomorphic operator functions . . . . .	211
6.11	Example: A globally non-trivial complemented holomorphic family of subspaces . . . . .	214
6.12	Comments . . . . .	216
<b>7</b>	<b>Plemelj-Muschelishvili factorization</b>	<b>219</b>
7.1	Definitions and first remarks about factorization . . . . .	220
7.2	The algebra of Wiener functions and other splitting $\mathcal{R}$ -algebras . .	222
7.3	Hölder continuous and differentiable functions . . . . .	230
7.4	Reduction of the factorization problem to functions, holomorphic and invertible on $\mathbb{C}^*$ . . . . .	237
7.5	Factorization of holomorphic functions close to the unit . . . . .	240
7.6	Reduction of the factorization problem to polynomials in $z$ and $1/z$	240
7.7	The finite dimensional case . . . . .	242
7.8	Factorization of $\mathcal{G}^\infty(E)$ -valued functions . . . . .	245
7.9	The filtration of an operator function with respect to a contour . .	251
7.10	A general criterion for the existence of factorizations . . . . .	259
7.11	Comments . . . . .	267
<b>8</b>	<b>Wiener-Hopf operators, Toeplitz operators and factorization</b>	<b>269</b>
8.1	Holomorphic operator functions . . . . .	269
8.2	Factorization of $\mathcal{G}^\omega(E)$ -valued functions . . . . .	273
8.3	The space $\mathcal{L}^2(\Gamma, H)$ . . . . .	276
8.4	Operator functions with values acting in a Hilbert space . . . . .	287
8.5	Functions close to the unit operator or with positive real part . . .	291
8.6	Block Töplitz operators . . . . .	297
8.7	The Fourier transform of $\mathcal{L}^1(\mathbb{R}, E)$ . . . . .	305
8.8	The Fourier isometry $\mathbf{U}$ of $\mathcal{L}^2(\mathbb{R}, H)$ . . . . .	313
8.9	The isometry $\mathbf{V}$ from $\mathcal{L}^2(\mathbb{T}, H)$ onto $\mathcal{L}^2(\mathbb{R}, H)$ . . . . .	317
8.10	The algebra of operator functions $L(H) \oplus \mathcal{L}^1(\mathbb{R}, L(H))$ . . . . .	320
8.11	Factorization with respect to the real line . . . . .	324
8.12	Wiener-Hopf integral operators in $\mathcal{L}^2([0, \infty[, H)$ . . . . .	325
8.13	An example . . . . .	338
8.14	Comments . . . . .	340

<b>9</b>	<b>Multiplicative cocycles with restrictions (<math>\mathcal{F}</math>-cocycles)</b>	<b>343</b>
9.1	$\mathcal{F}$ -cocycles . . . . .	343
9.2	The main results on cocycles with restrictions. Formulation and reduction to $\mathcal{O}_{D,Z,m}$ . . . . .	346
9.3	The Cartan lemma with restrictions . . . . .	347
9.4	Splitting over simply connected open sets after shrinking . . . . .	352
9.5	Runge approximation on simply connected open sets . . . . .	354
9.6	Splitting over simply connected open sets without shrinking . . . . .	358
9.7	Runge approximation. The general case . . . . .	362
9.8	The Oka-Grauert principle . . . . .	365
9.9	Comments . . . . .	367
<b>10</b>	<b>Generalized interpolation problems</b>	<b>369</b>
10.1	Weierstrass theorems . . . . .	369
10.2	Right- and two-sided Weierstrass theorems . . . . .	371
10.3	Weierstrass theorems for $\mathcal{G}^\infty(E)$ - and $\mathcal{G}^\omega(E)$ -valued functions . . . .	374
10.4	Holomorphic $\mathcal{G}^\infty(E)$ -valued functions with given principal parts of the inverse . . . . .	377
10.5	Comments . . . . .	378
<b>11</b>	<b>Holomorphic equivalence, linearization and diagonalization</b>	<b>379</b>
11.1	Introductory remarks . . . . .	379
11.2	Linearization by extension and equivalence . . . . .	380
11.3	Local equivalence . . . . .	386
11.4	A theorem on local and global equivalence . . . . .	392
11.5	The finite dimensional case . . . . .	394
11.6	Local and global equivalence for finite meromorphic Fredholm functions . . . . .	399
11.7	Global diagonalization of finite meromorphic Fredholm functions . . . .	406
11.8	Comments . . . . .	411
	<b>Bibliography</b>	<b>413</b>
	<b>Index</b>	<b>419</b>

Holomorphic Operator Functions of One Variable and  
Applications

Methods from Complex Analysis in Several Variables

Gohberg, I.; Leiterer, J.

2009, XX, 424 p., Hardcover

ISBN: 978-3-0346-0125-2

A product of Birkhäuser Basel
