

CONTENTS

Chapter I Simplicial sets	1
I.1. Basic definitions	3
I.2. Realization	6
I.3. Kan complexes	9
I.4. Anodyne extensions	14
I.5. Function complexes	20
I.6. Simplicial homotopy	23
I.7. Simplicial homotopy groups	25
I.8. Fundamental groupoid	36
I.9. Categories of fibrant objects	40
I.10. Minimal fibrations	47
I.11. The closed model structure	59
Chapter II Model Categories	65
1. Homotopical algebra	66
2. Simplicial categories	81
3. Simplicial model categories	89
4. The existence of simplicial model category structures	97
5. Examples of simplicial model categories	101
6. A generalization of Theorem 4.1	109
7. Quillen's total derived functor theorem	116
8. Homotopy cartesian diagrams	122
Chapter III Classical results and constructions	141
1. The fundamental groupoid, revisited	142
2. Simplicial abelian groups	147
3. The Hurewicz map	167
4. The Ex^∞ functor	184
5. The Kan suspension	191
Chapter IV Bisimplicial sets	199
1. Bisimplicial sets: first properties	200
2. Bisimplicial abelian groups	204
2.1. The translation object	205
2.2. The generalized Eilenberg-Zilber theorem	208
3. Closed model structures for bisimplicial sets	216
3.1. The Bousfield-Kan structure	216
3.2. The Reedy structure	217
3.3. The Moerdijk structure	225

4. The Bousfield-Friedlander theorem	227
5. Theorem B and group completion	237
5.1. The Serre spectral sequence	238
5.2. Theorem B	241
5.3. The group completion theorem	246
Chapter V Simplicial groups	255
1. Skeleta	256
2. Principal fibrations I: simplicial G -spaces	264
3. Principal fibrations II: classifications	269
4. Universal cocycles and $\overline{W}G$	273
5. The loop group construction	279
6. Reduced simplicial sets, Milnor's FK -construction	290
7. Simplicial groupoids	300
Chapter VI The homotopy theory of towers	311
1. A model category structure for towers of spaces	313
2. The spectral sequence of a tower of fibrations	319
3. Postnikov towers	330
4. Local coefficients and equivariant cohomology	333
5. On k -invariants	346
6. Nilpotent spaces	354
Chapter VII Reedy model categories	357
1. Decomposition of simplicial objects	357
2. Reedy model category structures	368
3. Geometric realization	377
4. Cosimplicial spaces	380
Chapter VIII Cosimplicial spaces: applications	393
1. The homotopy spectral sequence of a cosimplicial space	394
2. Homotopy inverse limits	404
3. Completions	416
4. Obstruction theory	422
Chapter IX Simplicial functors and homotopy coherence	435
1. Simplicial functors	435
2. The Dwyer-Kan theorem	441
3. Homotopy coherence	453
3.1. Classical homotopy coherence	453
3.2. Homotopy coherence: an expanded version	455
3.3. Lax functors	458
3.4. The Grothendieck construction	459
4. Realization theorems	461

Chapter X Localization	469
1. Localization with respect to a map	470
2. The closed model category structure	485
3. Bousfield localization	495
4. A model for the stable homotopy category	498

Simplicial Homotopy Theory

Goerss, P.G.; Jardine, J.

2009, XVI, 510 p., Softcover

ISBN: 978-3-0346-0188-7

A product of Birkhäuser Basel
