

# Table of contents

## CHAPTER 1 Setting the stage

<b>1.1 Space and sustainability.</b> <i>Kai-Uwe Schrogl, Charlotte Mathieu &amp; Agnieszka Lukaszczyk</i> . . . . .	3
1.1.1 Sustainability and space . . . . .	3
1.1.2 The European Space Policy Institute's (ESPI) conference "Threats, Risks and Sustainability – Answers by Space". . . . .	4
<b>1.2 The synergy of global threats.</b> <i>Jacques Blamont</i> . . . . .	7
1.2.1 The basic facts: population growth . . . . .	7
1.2.2 The limits of productivism . . . . .	8
1.2.3 The new players . . . . .	12
1.2.4 Changes to the way of life . . . . .	15
1.2.5 Synergy of threats . . . . .	18

## CHAPTER 2 Knowledge

<b>2.1 Overview</b> . . . . .	23
<b>2.2 Knowledge: understanding our place in the universe.</b> <i>Maria Teresa Lago</i> . . . . .	25
2.2.1 Introduction: knowledge and sustainability . . . . .	25
2.2.2 Our knowledge of the universe . . . . .	25
2.2.3 Knowledge in the European context. . . . .	29
<b>2.3 Sustainability on earth: space sciences supporting related research.</b> <i>Jean-Claude Worms</i> . . . . .	33
2.3.1 Introduction . . . . .	33
2.3.2 Removing the limits to growth? . . . . .	34

2.3.3	Sustainability on earth . . . . .	34
2.3.4	Looking everywhere, from high above . . . . .	35
2.3.5	Other applications. . . . .	40
2.3.6	Watching the skies . . . . .	41
2.3.7	Conclusion . . . . .	44

## **2.4 Knowledge, data and global sustainability: the role of space-based assets. Mark Williamson . . . . . 47**

2.4.1	Introduction: knowledge and data . . . . .	47
2.4.2	Satellites and data collection . . . . .	50
2.4.3	Ensuring continuity . . . . .	56
2.4.4	Conclusions . . . . .	59

## **CHAPTER 3 Environment**

### **3.1 Overview . . . . . 63**

### **3.2 Climate change and sustainability. Charlotte Mathieu . . . . . 65**

3.2.1	Observed changes in the climate and their effects . . . . .	65
3.2.2	Causes of those changes . . . . .	66
3.2.3	Projections . . . . .	67
3.2.4	Adaptation and mitigation options. . . . .	70
3.2.5	The long-term perspective. . . . .	74
3.2.6	Equity issues. . . . .	75

### **3.3 The contribution of earth observation to environmental monitoring and Global Monitoring for Environment and Security (GMES). Pierre Potin & Josef Aschbacher. . . . . 76**

3.3.1	Examples of earth observation for environmental monitoring. . . . .	76
3.3.2	The GMES programme . . . . .	81

### **3.4 Environmental threats and space responses. Jérôme Lafeuille. . . . . 92**

3.4.1	Introduction . . . . .	92
3.4.2	Aggravating environmental threats . . . . .	92

3.4.3	Space for mitigating threats . . . . .	96
3.4.4	Challenges . . . . .	99
3.4.5	Conclusion . . . . .	101

## CHAPTER 4 Resources

<b>4.1</b>	<b>Overview . . . . .</b>	<b>105</b>
------------	---------------------------	------------

<b>4.2</b>	<b>Food security and climate change: remote sensing and sustainable agricultural development.</b>	
	<i>Mahendra M. Shah . . . . .</i>	<i>107</i>

4.2.1	Food security and hunger . . . . .	107
4.2.2	Globalisation and food security . . . . .	108
4.2.3	Food security and climate change: an integrated agro-ecological and socio-economic world-wide assessment . . . . .	114
4.2.4	Concluding remarks . . . . .	122

<b>4.3</b>	<b>The use of space technologies for effective and sustainable responses to food insecurity threats in Africa.</b>	
	<i>Menghestab Haile . . . . .</i>	<i>125</i>

4.3.1	Overview: food insecurity . . . . .	125
4.3.2	The poverty reduction potential of space technologies . . . . .	126
4.3.3	Space technologies for food insecurity risk analysis . . . . .	129
4.3.4	Africa-level initiatives to improve food security using space technologies . . . . .	135
4.3.5	Partnership and capacity building. . . . .	137
4.3.6	Conclusion . . . . .	138

<b>4.4</b>	<b>Threats, risks and sustainability: answers from space earth observation data for the management of renewable resources.</b>	
	<i>Rupert Haydn, Stefan Saradeth, Peter Volk, Axel Relin, Thomas Häusler, Sharon Gomez &amp; Tobias Wever . . . . .</i>	<i>140</i>

4.4.1	Introduction . . . . .	140
4.4.2	The setting. . . . .	140

4.4.3	Case studies . . . . .	142
4.4.4	How to make EO services operational . . . . .	150

## **CHAPTER 5 Energy**

<b>5.1</b>	<b>Overview . . . . .</b>	<b>155</b>
------------	---------------------------	------------

### **5.2 Achieving sustainable and secure energy supplies in a carbon-constrained world.**

<i>Galina Zlatareva . . . . .</i>	<i>157</i>
-----------------------------------	------------

5.2.1	Introduction . . . . .	157
5.2.2	Growing demand and declining resources. . . . .	157
5.2.3	Sustainability . . . . .	164
5.2.4	Competitiveness – tackling climate change without affecting economic growth . . . . .	172
5.2.5	Conclusions . . . . .	173

### **5.3 Remote sensing for sustainable hydrocarbon exploration and reservoir monitoring.**

<i>Andreas Laake . . . . .</i>	<i>175</i>
--------------------------------	------------

5.3.1	Introduction . . . . .	175
5.3.2	Hydrocarbon exploration . . . . .	175
5.3.3	Challenges for risk minimisation and sustainability . . . . .	176
5.3.4	Data provided by remote sensing technology . . . . .	177
5.3.5	Surface and near-surface mapping . . . . .	178
5.3.6	Data integration . . . . .	179
5.3.7	Products. . . . .	180
5.3.8	Conclusion: answers by remote sensing technology . . . . .	183

### **5.4 Sustainable energy supply on earth – can space contribute? Wolfgang Seboldt. . . . .**

<i>186</i>
------------

5.4.1	Introduction . . . . .	186
5.4.2	Terrestrial solutions for a global regenerative power supply . . . . .	187
5.4.3	Space options for a global terrestrial power supply. . . . .	191
5.4.4	Summary and conclusions . . . . .	199

**CHAPTER 6 Mobility**

<b>6.1 Overview</b>	205
<b>6.2 Threats, risks and sustainability – the challenges to mobility.</b> <i>Michael Meyer zu Hörste.</i>	207
6.2.1 Introduction: what is mobility?	207
6.2.2 Mobility in general	210
6.2.3 Road traffic	211
6.2.4 Railways	213
6.2.5 Air transport	216
6.2.6 Fields of research: traffic management	217
6.2.7 Other modes of transport	219
6.2.8 Conclusions and outlook	220
<b>6.3 How space systems help to address the challenges associated with sustainability in the field of mobility.</b> <i>Mario Caporale.</i>	222
6.3.1 Introduction	222
6.3.2 Civil aviation	223
6.3.3 Maritime navigation	226
6.3.4 Road and rail transport	228
6.3.5 Concluding remarks	233
<b>6.4 Telematic solutions based on space technology.</b> <i>Kashif Din, Martin Linauer, Jürgen Zajicek &amp; Martin Reinthaler.</i>	235
6.4.1 Introduction	235
6.4.2 Application 1: optimal route guidance based on Floating Car Data	235
6.4.3 Application 2: monitoring of hazardous goods with real-time route analysis	240
6.4.4 Conclusions	246

## **CHAPTER 7 Security**

<b>7.1 Overview</b>	251
<b>7.2 The European contribution to sustainable security.</b> <i>Heinz Gärtner</i>	253
7.2.1 Security and philosophy	253
7.2.2 The new threats	253
7.2.3 Sustainable security	254
7.2.4 The European Security and Defence Policy (ESDP) in the Treaty of Lisbon	255
7.2.5 NATO's transformation	258
7.2.6 New approaches for the armed forces	261
<b>7.3 The global and European security context: a proposal for space.</b> <i>Erwin Duhamel</i>	264
7.3.1 The global and European context	264
7.3.2 A possible future for the European use of space for security	265
7.3.3 Space systems for security	269
7.3.4 Implementing guidelines: space command and control	278
7.3.5 The way forward/What lies ahead?	281
<b>7.4 Space for security and security in space.</b> <i>Gérard Brachet</i>	284
7.4.1 Introduction	284
7.4.2 Security in space: looking back, looking forward, the international legal framework for space activities and the future outlook for a secure space environment	285
7.4.3 Space for security	289
7.4.4 Conclusions	293

## **CHAPTER 8 Conclusions and Recommendations**

<b>Conclusions and recommendations.</b> <i>Kai-Uwe Schrogl, Charlotte Mathieu &amp; Agnieszka Lukaszczuk</i>	297
About the authors	301
List of acronyms	310
List of figures and tables	317

Threats, Risks and Sustainability - Answers by Space

Schrogl, K.-U.; Mathieu, C.; Lukaszczyk, A. (Eds.)

2009, X, 321 p., Hardcover

ISBN: 978-3-211-87449-3
