Tabelle 17: Resultate notwendige Bedingungen

- Konsistenzwert = 0.9
- Die Bedingungen (und ihre Negationen) werden zunächst getrennt voneinander untersucht. Sollte sich mehr als eine Bedingung als notwendig zeigen, kann in einem weiteren Schritt getestet werden, ob die Schnittmenge dieser Bedingungen ebenfalls notwendig ist.
- Die notwendigen Bedingungen (und ihre Negationen) werden auch bezüglich der Negation der Outcomes untersucht. Diese Informationen werden in die Interpretation mit einbezogen, wenn das Resultat von Relevanz ist.

Outcome: Mitgliedschaft (MITGL/mitgl)

VERST	0.30	0.55	verst	0.79	0.58

- Keine der Bedingungen = eindeutig notwendige Bedingung
- Interpretation der Abdeckung entfällt
- Durch Negation ermittelte Werte: 'Nichtvorhandenseins von Unsicherheit durch Problemverständnis' (verst) = höchster Konsistenzwert mit 0.79. Da es sich für notwendige Bedingungen empfiehlt, hohe Grenzwerte anzulegen, muss auch hier davon ausgegangen werden, dass diese Bedingung das Kriterium der Notwendigkeit nicht erfüllt. Auch hier entfällt somit die Interpretation des Abdeckungskoeffizienten.

- Keine der Bedingungen = eindeutig notwendige Bedingung
- Zwei Bedingungen zeigen jedoch relativ hohe Werte: Die Menge 'Komplexität' (KOMPL) sowie etwas weniger stark die Menge 'Machtasymmetrie' (MAC). Es kann davon ausgegangen werden, dass insbesondere der Anteil an Komplexität demnach das Mass an Bereitstellung von Anreizen für nichtstaatliche Akteure beeinflusst. Betrachtet man in diesen beiden Fällen den Abdeckungskoeffizienten, so ist festzuhalten, dass insbesondere die Bedingung 'MAC' als nicht relevant angesehen werden kann, da hier die Abdeckung bei einem Wert von 0.48 liegt. Die Abdeckung bei der Bedingung 'KOMPL" liegt etwas höher (0.51), aber auch hier muss angenommen werden, dass die Bedingung nicht als für das Outcome 'Anreiz für nichtstaatliche Akteure' eindeutig notwendig betrachtet werden kann.
- Bei den durch Negation ermittelten Mengen zeigt die Bedingung 'Nichtvorhandensein von Unsicherheit durch Problemverständnis' (verst) mit einer Konsistenz von 88% den höchsten Wert. Dieser liegt jedoch unter dem definierten Grenzwert von 0.9.

Outcome: Rolle der nichtstaatlichen Akteure (RONGO)

VERST	0.63	0.86	verst	0.99	0.55

- Die Bedingung 'KOMPL' (Vorhandensein von Komplexität) zeigt mit 91% einen hohen Konsistenzwert und mit 59% auch eine relativ breite Abdeckung. Das Vorhandensein von Komplexität kann demnach als notwendige Bedingung für eine inklusive Rolle nichtstaatlicher Akteure gelten.
- Die Bedingung des 'Vorhandenseins von Machtasymmetrie' zeigt ebenfalls einen relativ hohen Konsistenzkoeffizienten, kann jedoch aufgrund des Wertes unter 0.9 (den wir hier als Mindestmass ansehen) nicht als eindeutig notwendige Bedingung gelten.
- Bei den durch Negation errechneten Werten zeigt die Bedingung 'Nichtvorhandensein von Unsicherheit durch Problemverständnis' mit 99% ebenfalls einen hohen Konsistenzkoeffizienten. Der Abdeckungskoeffizient von 55% schwächt die Aussage. Diese Annahme verstärkt sich, wenn man die Negation des Outcomes 'Rolle nichtsstatlicher Akteure' anschaut. Hierbei kann bei der Bedingung 'verst' ein Konsistenzwert von 0.92 und ein Abdeckungswert von 0.75 beobachtet werden. Diese widersprüchlichen Aussagen lassen daher keine eindeutige Aussage zu.

Outcome: Entscheidungsprozeduren umgesetzt (REGPR)

VERST	0.33	1.00	verst	0.80	0.92

- Keine der Bedingungen = eindeutig notwendige Bedingung
- Bei den durch Negation berechneten Mengen zeigt die Menge 'verst' einen relativ hohen Konsistenzkoeffizienten. Allerdings kann dieser mit dem Wert 0.8 nicht als eindeutig notwendige Bedingung gelten.
- Die Negation des Outcomes zeigt für die Bedingung 'verst' einen hohen Konsistenzwert (0.99), jedoch einen geringen Abdeckungswert (0.26). Dies deutet darauf hin, dass die Bedingung des Nichtvorhandenseins von Unsicherheit aufgrund eines gemeinsamen Problemverständnisses widersprüchliche Ergebnisse erzeugt und daher für die Herausbildung von Entscheidungsprozeduren nicht als notwendige Bedingung gesehen werden kann. Die Bedingung einer hohen Komplexität (KOMPL) zeigt hinsichtlich der Negation des Outcomes ebenfalls einen hohen Konsistenzwert (0.92). Der Abdeckungswert liegt mit 29% allerdings relativ tief.

KOMPL	0.83	0.78	kompl	0.55	0.89
VERST	0.45	0.93	verst	0.91	0.76

- Der Konsistenzkoeffizient der Bedingung 'Nichtvorhandensein von Unsicherheit durch Problemverständnis' (verst) zeigt mit 91% bezüglich des Outcomes 'Vorhandensein von Kontrollmechanismen' einen hohen Wert, wenn auch hier nicht von einer hundertprozentig notwendigen Bedingung gesprochen werden kann.
- Der Abdeckungskoeffizient ist mit 76% beachtlich, was dafür spricht, dass diese Bedingung nicht als trivial angesehen werden kann. Eine Situation, die nicht von Unsicherheit geprägt ist, sondern über ein bestimmtes Mass an gemeinsamem Problemverständnis verfügt, kann demnach als notwendige Bedingung für die Herausbildung differenzierter Kontrollmechanismen gelten.

Outcome: Umsetzung der Kontrollmechanismen (KONPR)

KOMPL	0.68	0.90	kompl	0.44	1.00
VERST	0.33	0.99	verst	0.78	0.91

- Auch beim Outcome 'Umsetzung von Kontrollmechanismen in der Praxis' (KONPR) weist die Bedingung des 'Nichtvorhandenseins von Unsicherheit, bedingt durch Problemverständnis' (verst) den höchsten Konsistenzkoeffizienten auf. Allerdings ist dieser Wert zu gering, als dass hier von einer notwendigen Bedingung gesprochen werden kann, weshalb auch eine Analyse des Abdeckungskoeffizienten hinfällig wird.
- Betrachtet man die Bedingungen hinsichtlich der Negation des Outcomes, so fällt insbesondere die Bedingung Komplexität (KOMPL) auf, die einen Konsistenzwert von 1.0 aufweist. Allerdings ist hier nur eine geringe Abdeckung festzustellen, was die Bedingung für die theoretische Diskussion in diesem Zusammenhang als trivial erscheinen lässt.

Tabelle 18: Resultate hinreichende Bedingungen

- Die folgenden Resultate liefern hinsichtlich dieser drei Aspekte Informationen: (1) Die in die Analyse einfliessenden Informationen, (2) die Ergebnisse aufgrund eines komplexen Ansatzes, welcher die logischen Rudimente nicht in die Analyse mit einbezieht sowie (3) die Ergebnisse aufgrund eines vereinfachenden Ansatzes, welcher die logischen Rudimente in die Analyse integriert.
- Um eine möglichst hohe Transparenz der Analyseschritte zu ermöglichen, wird bei den einzelnen Outcomes jeweils angegeben, welcher Grenzwert bezüglich des Konsistenzmasses definiert wird.
- Auf die Resultate der Analyse der negativen Outcomes wird im Rahmen dieser Analyse nicht eingegangen, da diese für die Logik des Konzeptes keine bedeutenden Bedingungsmuster aufzeigen.
- Die Konsistenzwerte erreichen das erforderliche Mass nicht, weshalb auch eine Analyse der Abdeckungskoeffizienten dahin fällt. Diese Tatsache schmälert die Aussage der Analyse für die positiven Outcomes insofern, als dass keine Verstärkung der Aussagen hinsichtlich des Vorhandenseins von gegenteiligen Bedingungsmustern für die Negation eines Outcomes gemacht werden können.

Gesamtkonsistenz:	0.737143		

- Konsistenzwert = 0.7
- Komplexe Lösung:
    - Zwei mögliche Lösungspfade: ‘gro*int*kompl*verst’ und ‘int*MAC*kompl*verst’.
    - Betrachtet man die einzelnen Lösungspfade, so zeigen sich Konsistenzwerte von 69% und 76%. Der zweite Lösungspfad liegt somit über dem bei der Erstellung der Wahrheitstafel definierten Grenzwert. Die Einzelabdeckungen sind sehr gering. Die Rohabdeckungen zeigen für beide Pfade ähnliche Werte. Die Gesamtlösung zeigt einen Konsistenzwert von 73% und liegt somit ebenfalls knapp über dem definierten Grenzwert. Die Abdeckung liegt bei 43%. Betrachtet man die beiden Lösungsterme, so ergibt sich eine weitere logische Minimierung, welche für eine inklusive Mitgliedschaft einen geringen Grad an Interessenasymmetrie, einen geringen Grad an Komplexität und einen geringen Grad an Unsicherheit ausgelöst durch hohes gemeinsames Problemverständnis in Kombination mit entweder einer kleinen

Gruppe oder aber dem Vorhandensein einer grossen Machtasymmetrie als hinreichende Bedingungen beschreibt.

  - Diese Minimierung ergibt folgenden Term: ‘gro + MAC (int*kompl*verst)’. Eine weitere Minimierung lässt sich vornehmen, wenn man die Werte der Bedingung ‘verst’ im Rahmen der Wahrheitstafel Analyse betrachtet. Da die Bedingung nur in einer beobachteten Kombination als vorhanden erscheint, kann diese Bedingung für die Interpretation vernachlässigt werden. Demnach würde die Minimierung der komplexen Lösung sich um die Bedingung ‘verst’ reduzieren. Zwei Typen von Gruppen scheinen demnach von Bedeutung: Gruppen, die sich durch eine geringe Interessenasymmetrie und eine geringe Problemkomplexität auszeichnen und darüber hinaus entweder einer geringe Grösse oder aber eine starke Machtasymmetrie aufweisen.

- Vereinfachende Lösung:
  - Ein hinreichender Lösungspfad: ‘int*kompl’.
  - Die Gesamtlösung und, da nur ein Pfad als hinreichend gewertet wird, auch die Einzellösung ist zu 74% konsistent und deckt 45% der unscharfen Mitgliedswerte der untersuchten Fälle im Outcome ab. Der Lösungsterm ‘int*kompl’ liegt somit in seiner Konsistenz über dem definierten Grenzwert und zeigt einen mittleren Abdeckungsgrad. Die beiden Bedingungen einer geringen Interessenasymmetrie in Kombination mit einer geringen Komplexität scheinen für das Outcome einer inklusiven Mitgliedschaft (‘MITGL’) von Bedeutung zu sein. Dieses Resultat zeigt sich sowohl in Berücksichtigung der Bedingung eines gemeinsamen Problemverständnisses als auch ohne. Eine inklusive Mitgliedschaft kann demnach bei Nichtvorhandensein von Interessenasymmetrien in Kombination mit Nichtvorhandensein von Komplexität auftreten.

Gesamtkonsistenz:	0.605051		

- Konsistenzwert = 0.6 (aufgrund niedrigen Wertes ist die Aussagekraft limitiert)
- Komplexe Lösung:

- Drei Lösungspfade: ‘gro*INT*MAC*verst’, ‘gro*INT*KOMPL*verst’ und ‘GRO*MAC*KOMPL*verst’.
- Die Konsistenzwerte der beiden letzteren Lösungspfade liegen knapp über dem definierten Grenzwert. Die einzelnen Lösungspfade zeigen eine relativ grosse Abweichung von einer eindeutigen Teilmengenbeziehung. Der erste Lösungspfad zeigt eine sehr geringe alleinige Abdeckung und ist daher als hinreichende Bedingung nicht von Bedeutung. Der dritte Lösungspfad, welcher die Kombination des Vorhandenseins einer grossen Gruppe, dem Vorhandensein von Machtasymmetrien, dem Vorhandensein von Komplexität sowie dem Nichtvorhandensein von Unsicherheit, ausgelöst durch ein gemeinsames Problemverständnis aufweist, zeigt mit 65% den höchsten Konsistenzkoeffizienten und die grösste Rohabdeckung mit 57%. Darüber hinaus zeigt diese Teillösung eine Einzelabdeckung von 33%. Der dritte Lösungspfad scheint demnach für die Auswertung von besonderem Interesse zu sein. Schliesst man die Bedingung ‘verst’ aufgrund ihrer nur geringen Varianz in der Wahrheitstafel für die Interpretation aus, so erscheint der Lösungspfad einer grossen Gruppe in Kombination mit hoher Machtasymmetrie und hoher Komplexität bezüglich des Vorhandenseins hoher Anreize für nichtstaatliche Akteure ebenfalls als am bedeutendsten.
- Die Gesamtlösung der komplexen Lösung ist zu 63% konsistent und liegt damit ebenfalls knapp über dem definierten Grenzwert und deckt 75% der unscharfen Mitgliedswerte der Fälle im Outcome ab.

- Vereinfachende Lösung:
  - Zwei Lösungspfade: ‘gro*INT’ und ‘GRO*KOMPL*verst’.
  - Der zweite Lösungsweg zeigt einen deutlich höheren alleinigen Abdeckungswert als der erste Lösungsweg. Der erste Lösungspfad beinhaltet allerdings die als notwendig definierte Bedingung der Komplexität nicht. Dieser Widerspruch ist insofern zu erklären, als dass einerseits in der Analyse hinreichender Bedingungen ein niedriger Konsistenzgrenzwert festgelegt werden musste und andererseits die Komplexität als notwendige Bedingung eine relativ geringe Abdeckung aufweist, was die Aussagekraft ebenfalls schmälert.
  - Bezieht man bei der vereinfachenden Analyse ebenfalls die geringe Aussagekraft der Bedingung ‘verst’ mit ein, so besitzt auch hier der Lösungsterm ‘GRO*KOMPL’ die grösste Abdeckung. Es kann daher vermutet werden, dass Anreize für nichtstaatliche Akteure insbesondere in Fällen auftreten können die gekennzeichnet sind durch das Vorhandensein einer grossen Gruppe und hohe Komplexität.

- Konsistenzwert = 0.9
- Komplexe Lösung:
    - Die Gesamtlösung ist zu 84% konsistent und zeigt eine Abdeckung von 75%. Die einzelnen Lösungspfade zeigen ebenfalls hohe Konsistenzwerte. Der erste und zweite Lösungspfad zeigen zudem eine höhere Rohabdeckung als die beiden letzteren Lösungen. Die höchste alleinige Abdeckung zeigt die dritte Lösung mit 11%. Alle Lösungspfade zeigen eine hohe Komplexität bezüglich der miteinander als hinreichende Bedingungen geltenden Aspekte, was eine klare Interpretation der Ergebnisse erschwert. Schliesst man die Bedingung eines gemeinsamen Problemverständnisses aus, so zeigt das Resultat noch die drei ersten Lösungspfade ohne die Bedingung ‘verst’. Die Konsistenz- und Abdeckungskoeffizienten verändern sich nicht signifikant. Eine klare Interpretation ist jedoch nach wie vor nicht möglich, da die Bedingungen bei kleinen und grossen Gruppen in je unterschiedlichen Kombinationen auftreten. Auffallend ist, dass es sich entweder um Fälle zu handeln scheint, die durch eine grosse Problemkomplexität oder aber einen hohen Grad an Machtasymmetrie geprägt sind. Diese beiden Aspekte scheinen demnach sowohl in kleinen als auch in grossen Gruppen für das Vorhandensein einer inklusiven Partizipation nichtsstaatlicher Akteure von Bedeutung zu sein.
- Vereinfachende Lösung:
    - Die Gesamtlösung ist hier zu 79% konsistent und deckt mit 88% einen beachtlichen Teil des zu erklärenden Outcome ab. Der erste Lösungspfad zeigt die grösste Einzelabdeckung. Allerdings ist diese Bedingung aus genannten Gründen nur bedingt als Lösung zu berücksichtigen. Vernachlässigt man diese Bedingung in der Analyse, so bleiben die drei anderen Lösungspfade übrig, wobei sich ein leicht höherer Konsistenzwert zeigt und die dritte Lösung eine bedeutend höhere Abdeckung zeigt. Die Kombination verschiedener Bedingungen erschwert jedoch eine konzise Aussage. Die Daten zeigen, dass bei den untersuchten Fällen verschiedene Kombinationen von Bedingungen als hinreichend für eine umfassende Beteiligung nichtstaatlicher Akteure gelten können. Die untersuchten Bedingungen lassen jedoch keinen eindeutigen Schluss bezüglich dieses Outcomes zu.

- Konsistenzwert = 1.0
- Komplexe Lösung:
    - Die Gesamtlösung ist zu 98% konsistent und deckt 64% der unscharfen Mitgliedswerte im Outcome REGPR ab. Der Konsistenzwert liegt damit nur knapp unter dem definierten Grenzwert und die Abdeckung zeigt einen beachtlichen Wert. Auch die einzelnen Lösungspfade verfügen über sehr hohe Konsistenzwerte (98%-100%), variieren bei der Rohabdeckung jedoch zwischen 30% bis 46%. Die beiden Lösungspfade mit den höchsten Einzelabdeckungen zeigen zwei unterschiedliche Kombinationen von hinreichenden Bedingungen für je grosse und kleine Gruppen. Sowohl bei kleinen als auch grossen Gruppen scheint die Kombination mit hoher Gruppenasymmetrie und einer hohen Problemkomplexität wichtig zu sein. Wiederum kann aufgrund einer genauen Betrachtung der Werte in der Wahrheitstafel die Bedingung ‘verst’ für die Interpretation vernachlässigt werden. Schliesst man diese Bedingung von der Analyse aus, so zeigen sich nur noch zwei mögliche Lösungspfade: ‘gro*(MAC*kompl+mac*KOMPL). Da sich die beiden Terme der Machtasymmetrie und der Problemkomplexität gegenseitig minimieren lassen, scheint eine kleine Gruppe demnach als hinreichende Bedingung von besonderer Bedeutung in der Herausbildung konsensorientierter Entscheidungsprozeduren zu sein.
- Vereinfachende Lösung:
    - Zwei Lösungspfade, die jedoch in ihrer Komplexität stark reduziert sind: (1) ‘gro*MAC’ oder (2) ‘INT*KOMPL’.
    - In ihrer Gesamtheit zeigen die zwei Lösungspfade einen leicht geringeren Konsistenzwert von 96% als dies die komplexe Lösung zeigt. Die Abdeckung liegt hingegen etwas höher bei 70%. Die einzelnen Konsistenzwerte sind ebenfalls sehr hoch, die Einzelabdeckung hingegen liegt beim zweiten Lösungsterm deutlich höher. Das Vorhandensein von Interessenasymmetrie in Kombination mit hoher Problemkomplexität scheint demnach als hinreichende Bedingung ebenfalls von Bedeutung. Schliesst man die Bedingung ‘verst’ aus der Analyse aus, so können auch bei der vereinfachenden Lösung noch zwei Lösungspfade als hinreichende Bedingungen definiert werden: (1) Eine kleine Gruppe in Kombination mit hoher Machtasymmetrie und geringer Komplexität oder (2) das Vorhandensein von grosser Komplexität mit geringer Machtasymmetrie. Unterzieht man diese Terme einer weiteren logischen Minimierung, so bleibt wiederum einer kleine Gruppengrösse als entscheidende Bedingung zurück. Die Gesamtabdeckung dieser Lösung ist jedoch geringer (45%). Das Vorhandensein von Interessenasymmetrie in Verbindung mit hoher Problemkomplexität ist dennoch nicht zu vernachlässigen.

Die beiden Lösungspfade der komplexen Lösung zeigen beide die Bedingung ‘verst’ in ihrem Lösungsterm, was auf die zuvor errechnete notwendige Bedingung hinweist, dass bei einem gemeinsamen Problemverständnis differenzierte Kontrollmechanismen beobachtet werden können.
    - Bezieht man die Bedingung eines gemeinsamen Problemverständnisses aufgrund ihrer sehr geringen Varianz in der Wahrheitstafel nicht in die Analyse mit ein, so bleibt bei weiterer Minimierung das Nichtvorhandensein einer grossen Gruppe (gro) als bestimmende Bedingung übrig. Inhaltlich besagt uns der Lösungsterm sodann, dass bei Fällen, die durch eine kleine Gruppengrösse gekennzeichnet sind, umfassende Kontrollmechanismen beobachtet werden können.

	Rohabdeckung	Alleinige Abdeckung	Konsistenz
kompl+	0.440759	0.239229	1.000000
INT*MAC	0.426304	0.224773	0.980443
Gesamtabdeckung:	0.665532		
Gesamtkonsistenz:	0.987384		

- Konsistenzwert = 1.0
- Komplexe Lösung:
    - Vier verschiedene Lösungspfade, die alle über einen Konsistenzkoeffizienten von 1.0 verfügen. Die Abdeckung der Gesamtlösung beträgt 61%. Die Rohabdeckung der einzelnen Lösungen liegt deutlich tiefer bei 28-37%. Die Lösungspfade zeigen geringe Werte hinsichtlich der alleinigen Abdeckungen. Schliesst man die Bedingung eines gemeinsamen Problemverständnisses aus der Analyse aus, so bleiben die drei ersten Lösungspfade (ohne 'verst') als mögliche hinreichende Bedingungen übrig. Die Kombination 'INT*MAC' zeigt dabei die grösste alleinige Abdeckung von 22%.
- Vereinfachende Lösung:
    - Zwei Lösungspfade gelten als hinreichende Bedingungen: (1) 'kompl' oder (2) 'INT*MAC'.
    - Diese Gesamtlösung zeigt einen hohen Konsistenzkoeffizienten von 99% und eine Gesamtabdeckung von 67%.
