

Contents

1	Introduction to Computability	1
1.1	Discrete computability and complexity	1
1.2	Computability and complexity of real numbers and functions	5
1.3	Computability and complexity of subsets of \mathbb{R}^k	11
1.4	Weakly computable sets	14
1.5	Set-valued functions and uniformity	17
2	Dynamics of Rational Mappings	21
2.1	General facts about Riemann surfaces and the hyperbolic metric ...	21
2.2	Julia sets of rational mappings	27
3	First Examples	37
3.1	A case study: hyperbolic Julia sets	37
3.2	Maps with parabolic orbits	49
3.3	Computing Julia sets with parabolic orbits efficiently	53
3.4	Lack of uniform computability of Julia sets	60
4	Positive Results	65
4.1	Computability of filled Julia sets	65
4.2	Julia sets without rotation domains	69
4.3	Computable Julia sets of Siegel quadratics	70
4.4	Robust computability	75
5	Negative Results	81
5.1	Siegel disks and Cremer points	81
5.2	Non-computable Julia sets	90
5.3	The complexity of Julia sets	103
5.4	Proofs of the main technical lemmas	107
5.5	Number theory and computability	111
5.6	Quadratics with non-computable Julia sets are rare	113

6	Computability vs Topology	119
6.1	How can the boundary of a computable set be non-computable?...	119
6.2	Locally connected quadratic Julia sets	120
6.3	Local connectedness versus computability of J_θ	127
6.4	Non-computable locally connected Julia sets	136
	References	146
Index	149

Computability of Julia Sets

Braverman, M.; Yampolsky, M.

2009, XIII, 151 p., Hardcover

ISBN: 978-3-540-68546-3
