

Contents

Preface	1
1 Preliminary Concepts	3
1.1 Introduction	3
1.2 Modeling a Communication System	3
1.3 Modulation	6
1.4 Error Correcting Codes	7
1.4.1 Block Codes	7
1.4.2 Stream Codes	9
1.5 Information Theory Basics	10
1.6 The Following Chapters	17
2 Trellis-based Detection Techniques	19
2.1 Introduction	19
2.2 Hard-Output and Soft-Output Detection	19
2.2.1 The Viterbi Algorithm	21
2.2.2 The Forward-Backward Algorithm	25
2.3 Optimal Detection Strategies for Channels with Memory	30
2.4 Detection of Encoded Data	32
2.4.1 Joint Detection and Decoding	32
2.4.2 Separate Detection and Decoding	33
2.4.3 Iterative Detection and Decoding	33
2.4.4 Turbo Detection	35
2.5 Concluding Remarks	36
3 Low-Density Parity-Check Codes	37
3.1 Introduction	37
3.2 Description of LDPC Codes	37
3.3 Statistical Description of LDPC Codes	40

3.4	Decoding Algorithms for LDPC Codes	42
3.4.1	Sum-Product Algorithm	42
3.4.2	Min-Sum Algorithm	49
3.4.3	Alternative Decoding Algorithms	53
3.5	Practical LDPC Code Design from Statistical Description . . .	53
3.6	Encoding Techniques for LDPC Codes	56
3.6.1	Encoding by Matrix Multiplication	56
3.6.2	Recursive Encoding and Structured Codes	58
3.7	Concluding Remarks	59
4	Performance Analysis Techniques	61
4.1	Introduction	61
4.2	Monte Carlo System Simulation	62
4.3	Density Evolution	68
4.4	EXIT Charts	71
4.4.1	EXIT Curves and EXIT Charts	72
4.4.2	SISO Detectors and EXIT Charts	73
4.5	EXIT Charts for LDPC Codes	78
4.6	Concluding Remarks	81
5	LDPC Coded Modulations: Analysis and Design	83
5.1	Introduction	83
5.2	LDPC Coded Modulation Schemes: Basics	85
5.2.1	A Graph-Based Detection/Decoding Approach	85
5.2.2	A “Turbo” Detection/Decoding Approach	86
5.3	Communication System Model	87
5.4	EXIT Chart-Based Performance Analysis	90
5.4.1	The First Iterations	91
5.4.2	The Asymptotic Convergence Region	92
5.5	Upper and Lower Bounds on the BER	93
5.5.1	MI-Based Lower Bound on the BER	93
5.5.2	MI-Based Upper Bound on the BER	94
5.6	Code Design for LDPC Coded Modulations	95
5.6.1	The Need for Optimization	96
5.6.2	Optimizing the EXIT Charts	97
5.7	Code Design for Fast Decoding Convergence	101
5.8	Code Design for a Target BER	110
5.8.1	Target BER-based LDPC Code Design for BEC	112
5.9	Code Design for Dispersive and Partial Response Channels . .	120
5.9.1	System Structure and Analysis	120

5.9.2	Theoretical Considerations	121
5.9.3	An ISI Channel SISO Property	124
5.9.4	LDPC Codes Designed for ISI channels	124
5.9.5	Comments	126
5.10	Concluding Remarks	127
6	Memoryless Channels and LDPC Codes	129
6.1	Introduction	129
6.2	Performance of LDPC Codes on Binary-Input Memoryless Channels	130
6.2.1	The Start Point in EXIT Charts	131
6.2.2	Numerical Evidence	132
6.2.3	Implications	136
6.3	Multilevel Code Design	137
6.3.1	Multilevel Scheme Overview	138
6.3.2	Code Selection with the MI Rule	140
6.4	Concluding Remarks	144
7	LDPC Codes and Differential Modulations	147
7.1	Introduction	147
7.2	Serial Concatenation of LDPC Codes with PSK and DE-PSK	148
7.3	Optimized LDPC Codes for PSK	152
7.4	LDPC Codes for DE-QAM	157
7.5	LDPC Codes for DE-PSK with Noncoherent Detection	159
7.6	Detection by Multiple Trellises	160
7.6.1	Time-Invariant Parameters	161
7.6.2	Time-Varying Parameters	163
7.7	LDPC Coded Schemes with Detection by Multiple Trellises	170
7.7.1	Phase-Uncertain Channels	170
7.7.2	Flat Fading Channels	172
7.8	Concluding Remarks	178
8	Final Remarks	179
	List of Acronyms	193
	Index	195
