Part I Background

1 Introduction	3
References	6
2 Basics of Quantum Mechanics	7
2.1 Introductory Remarks	7
2.2 Operator Representations	8
2.2.1 Transition Operators	8
2.2.2 Pauli Operators	9
2.2.3 State Representation	9
2.2.4 Purity and von Neumann Entropy	11
2.2.5 Bipartite Systems	12
2.2.6 Multipartite Systems	14
2.3 Dynamics	15
2.4 Invariants	17
2.5 Time-Dependent Perturbation Theory	19
2.5.1 Interaction Picture	19
2.5.2 Series Expansion	20
References	22
3 Basics of Thermodynamics and Statistics	23
3.1 Phenomenological Thermodynamics	23
3.1.1 Basic Definitions	23
3.1.2 Fundamental Laws	24
3.1.3 Gibbsian Fundamental Form	28
3.1.4 Thermodynamic Potentials	29
3.2 Linear Non-equilibrium Thermodynamics	30
3.3 Statistics	32
3.3.1 Boltzmann's Principle, A Priori Postulate	33
3.3.2 Microcanonical Ensemble	34

3.3.3	Statistical Entropy, Maximum Principle	36
	References	39
4	Brief Review of Pertinent Concepts	41
4.1	Boltzmann's Equation and H -Theorem	42
4.2	Ergodicity	46
4.3	Ensemble Approach	47
4.4	Macroscopic Cell Approach	48
4.5	The Problem of Adiabatic State Change	51
4.6	Shannon Entropy, Jaynes' Principle	53
4.7	Time-Averaged Density Matrix Approach	54
4.8	Open System Approach and Master Equation	55
	References	61
 Part II Equilibrium		
5	The Program for the Foundation of Thermodynamics	65
5.1	Basic Checklist: Equilibrium Thermodynamics	66
5.2	Supplementary Checklist: Quantum Mechanical Versus Classical Aspects	68
	Reference	68
6	Outline of the Present Approach	69
6.1	Typicality and Dynamics	69
6.1.1	On the Analysis of Quantum Typicality	73
6.2	Compound Systems, Entropy, and Entanglement	74
6.3	Fundamental and Subjective Lack of Knowledge	75
	References	76
7	Dynamics and Averages in Hilbert Space	77
7.1	Representation of Hilbert Space	77
7.2	Dynamics in Hilbert Space	78
7.3	Hilbert Space Average and Variance	81
	References	83
8	Typicality of Observables and States	85
8.1	A Class of Accessible Regions	85
8.2	Hilbert Space Average of Observables	87
8.3	Hilbert Space Variance of Observables	89
8.4	Hilbert Space Averages of Distances Between States	91
	References	93

9	System and Environment	95
9.1	Partition of the System and Pertinent Notation	95
9.2	Comment on Bipartite Systems and Physical Scenarios	98
9.3	Weak Coupling and Corresponding Accessible Regions	100
9.3.1	Microcanonical Conditions	102
9.3.2	Energy Exchange Conditions	103
	References	105
10	The Typical Reduced State of the System	107
10.1	Reduced State and Typicality	107
10.2	Microcanonical Conditions	110
10.2.1	Microcanonical Average State	110
10.2.2	Typicality of the Microcanonical Average State	111
10.3	Energy Exchange Conditions	113
10.3.1	Energy Exchange Average State	113
10.3.2	Typicality of the Energy Exchange Average State	114
10.4	Canonical Conditions	115
10.5	Beyond Weak Coupling	116
	References	117
11	Entanglement, Correlations, and Local Entropy	119
11.1	Entanglement, Correlations, and Relaxation	119
11.2	Entropy and Purity	123
	References	126
12	Generic Spectra of Large Systems	129
12.1	The Extensivity of Entropy	129
12.2	Spectra of Modular Systems	131
12.3	Entropy of an Ideal Gas	134
12.4	Environmental Spectra and Boltzmann Distribution	136
12.5	Beyond the Boltzmann Distribution?	137
	References	137
13	Temperature	139
13.1	Definition of Spectral Temperature	140
13.2	The Equality of Spectral Temperatures in Equilibrium	141
13.3	Spectral Temperature as the Derivative of Energy with Respect to Entropy	143
13.3.1	Contact with a Hotter System	144
13.3.2	Energy Deposition	145
	References	148
14	Pressure and Adiabatic Processes	149
14.1	On the Concept of Adiabatic Processes	150
	References	155

15	Quantum Mechanical and Classical State Densities	157
15.1	Bohr–Sommerfeld Quantization	159
15.2	Partition Function Approach	159
15.3	Minimum Uncertainty Wave Package Approach	161
15.4	Implications of the Minimum Uncertainty Wave Package Approach	170
15.5	Correspondence Principle	170
	References	171
16	Equilibration in Model Systems	173
16.1	Microcanonical Entropy	174
16.2	Canonical Occupation Probabilities and Entropy	176
16.3	Probability Fluctuations	180
16.4	Spin Systems	182
16.4.1	Global Observables	182
16.4.2	Local Properties	183
16.4.3	Chain Coupled Locally to a Bath	185
	References	188
 Part III Non-equilibrium		
17	Brief Review of Relaxation and Transport Theories	191
17.1	Relaxation	192
17.1.1	Fermi’s Golden Rule	192
17.1.2	Weisskopf–Wigner Theory	193
17.1.3	Open Quantum Systems	194
17.2	Transport	194
17.2.1	Boltzmann Equation	195
17.2.2	Peierls Approach and Green’s Functions	196
17.2.3	Linear Response Theory	197
	References	198
18	Projection Operator Techniques and Hilbert Space Average Method	201
18.1	Interaction Picture of the von Neumann Equation	202
18.2	Projection on Arbitrary Observables	202
18.3	Time-Convolutionless Master Equation	204
18.4	Generalization of the Hilbert Space Average	206
18.5	Dynamical Hilbert Space Average Method	208
18.6	Comparison of TCL and HAM	211
	References	212
19	Finite Systems as Thermostats	215
19.1	Finite Quantum Environments	216

19.2	Standard Projection Superoperator	217
19.3	Correlated Projection Superoperator	220
19.4	Accuracy of the Reduced Description	222
	References	225
20	Projective Approach to Dynamical Transport	227
20.1	Classification of Transport Behavior	227
20.2	Single-Particle Modular Quantum System	228
20.3	General TCL Approach	230
20.4	Concrete TCL Description and Timescales	231
20.5	TCL Approach in Fourier Space	233
20.6	Length Scale-Dependent Transport Behavior	234
20.7	Energy and Heat Transport Coefficient	238
	References	240
21	Open System Approach to Transport	241
21.1	Model System	242
21.2	Lindblad Quantum Master Equation	242
21.3	Observables and Fourier's Law	244
21.4	Monte Carlo Wave Function Simulation	245
21.5	Chain of Two-Level Atoms	248
	References	253
 Part IV Applications and Models		
22	Purity and Local Entropy in Product Hilbert Space	257
22.1	Unitary Invariant Distribution of Pure States	257
22.2	Application	259
	References	261
23	Observability of Intensive Variables	263
23.1	On the Existence of Local Temperatures	263
23.1.1	Model	264
23.1.2	Global Thermal State in the Product Basis	265
23.1.3	Conditions for Local Thermal States	267
23.1.4	Spin Chain in a Transverse Field	269
23.2	Measurement Schemes	271
23.2.1	Pressure	271
23.2.2	Temperature	274
	References	274
24	Observability of Extensive Variables	275
24.1	Work and Heat	275

24.1.1	LEMBAS Scenario	275
24.1.2	Applications	279
24.1.3	Remarks	281
24.2	Fluctuations of Work	282
24.2.1	Microcanonical Coupling	284
24.2.2	Canonical Coupling: Constant Interaction Energy	286
24.2.3	Canonical Coupling: High-Temperature Limit	286
24.2.4	Numerical Verification	288
	References	289
25	Quantum Thermodynamic Processes	291
25.1	Model of Control	291
25.2	Quasi-static Limit	293
25.2.1	Thermodynamic Quantities	293
25.2.2	Otto Cycle	295
25.2.3	Carnot Cycle	297
25.2.4	Continuum Limit of the Particle in a Box	299
25.3	Processes Beyond the Quasi-static Limit	300
25.3.1	Solution of the Relaxation Equation	302
25.3.2	Otto Cycle at Finite Velocity	303
25.3.3	Carnot Cycle at Finite Velocity	308
	References	313
A	Hyperspheres	315
A.1	Averaging of Functions over Hyperspheres	315
B	General Hilbert Space Averages and Variances	319
B.1	Hilbert Space Averages of Polynomial Terms	319
B.2	Hilbert Space Variance of an Observable	321
C	Special Hilbert Space Averages and Variances	325
C.1	General Distances Between States	325
C.2	Microcanonical Hilbert Space Averages	326
C.3	Microcanonical Hilbert Space Variances	327
C.4	Energy Exchange Hilbert Space Averages	329
C.5	Energy Exchange Hilbert Space Variance	330
D	Power of a Function	333
E	Local Temperature Conditions for a Spin Chain	335
	References	338
