

# Contents

<b>Understanding Enzyme Mechanism through Protein Chimeragenesis.....</b>	<b>1</b>
N.M. Goodey and S.J. Benkovic	
<b>Chemical Protein Engineering: Synthetic and Semisynthetic Peptides and Proteins.....</b>	<b>29</b>
L. Merkel, L. Moroder, and N. Budisa	
<b>Native Chemical Ligation: SemiSynthesis of Post-translationally Modified Proteins and Biological Probes.....</b>	<b>65</b>
B. Imperiali and E. Vogel Taylor	
<b>Chemical Methods for Mimicking Post-Translational Modifications .....</b>	<b>97</b>
S.I. van Kasteren, P. Garnier, and B.G. Davis	
<b>Noncanonical Amino Acids in Protein Science and Engineering .....</b>	<b>127</b>
K.E. Beatty and D.A. Tirrell	
<b>Fidelity Mechanisms of the Aminoacyl-tRNA Synthetases.....</b>	<b>155</b>
A. Mascarenhas, S. An, A.E. Rosen, S.A. Martinis, and K. Musier-Forsyth	
<b>Specialized Components of the Translational Machinery for Unnatural Amino Acid Mutagenesis: tRNAs, Aminoacyl-tRNA Synthetases, and Ribosomes .....</b>	<b>205</b>
C. Köhrer and U.L. RajBhandary	
<b>In Vivo Studies of Receptors and Ion Channels with Unnatural Amino Acids .....</b>	<b>231</b>
D.A. Dougherty	

<b>Synthesis of Modified Proteins Using Misacylated tRNAs.....</b>	<b>255</b>
S.M. Hecht	
<b>Cell-Free Synthesis of Proteins with Unnatural Amino Acids. The PURE System and Expansion of the Genetic Code.....</b>	<b>271</b>
I. Hirao, T. Kanamori, and T. Ueda	
<b>Engineering Nucleobases and Polymerases for an Expanded Genetic Alphabet.....</b>	<b>291</b>
A.M. Leconte and F.E. Romesberg	
<b>Understanding Membrane Proteins. How to Design Inhibitors of Transmembrane Protein–Protein Interactions .....</b>	<b>315</b>
J.S. Slusky, H. Yin, and W.F. DeGrado	
<b>Index.....</b>	<b>339</b>
