Contributors	XV
---------------------------	----

1 Cattle

M. D. MacNeil, J. M. Reecy, D. J. Garrick	1
1.1 Introduction	1
1.1.1 History	1
1.1.2 Economic Importance	1
1.2 Molecular Genetics	3
1.2.1 Genetic-Mapping Resources	3
1.2.2 Quantitative Trait Loci	5
1.2.3 Using Genotypes in Breeding Cattle	8
1.3 Future Scope of Work	9
References	10

2 Water Buffalo

L. Iannuzzi and G. P. Di Meo	19
2.1 Introduction	19
2.1.1 Taxonomic Description	19
2.1.2 Economic Importance	21
2.1.3 Breeding Objectives	22
2.2 Molecular Genetics	23
2.2.1 Classical Mapping Efforts	23
2.2.2 Construction of Genetic Maps and Comparative Mapping	24
2.3 Future Scope of Work	28
References	28

3 Sheep

C. A. Bidwell, N. E. Cockett, J. F. Maddox and J. E. Beever	33
3.1 Introduction	33
3.1.1 Economic and Biomedical Importance	33
3.1.2 History	34
3.1.3 The Sheep Karyotype	34
3.2 Molecular Genetics	35
3.2.1 Linkage Maps	36
3.2.2 Mapped Traits in Sheep	36
3.2.3 Resources for Mapping and Sequencing the Ovine Genome	39
3.3 Future Scope of Work	41
References	41

4 Deer

Richard J. Hall	47
4.1 Introduction	47
4.1.1 Taxonomic Description	47
4.1.2 Economic Importance	48
4.1.3 Karotype of Cervids	48

4.2	Molecular Genetics	48
4.2.1	Genetic Analysis Using Molecular Markers	48
4.2.2	The Deer Genetic Map	60
4.2.3	Genes	61
4.2.4	Quantitative Trait Loci in Deer	62
4.2.5	Chronic Wasting Disease of North American Cervids	65
4.3	Future Scope of Work	66
	References	67

5 Poultry

Michael N. Romanov Alexei A. Sazanov, Irina Moiseyeva,

and Aleksandr F. Smirnov

5.1	Introduction	75
5.1.1	Brief History and Zoological Description	75
5.1.2	Chickens	77
5.1.3	Economic Importance and Nutritional Value	82
5.1.4	Breeding Objectives	85
5.2	Classic Genetics	86
5.2.1	Brief History of Poultry Genetics	86
5.2.2	Early Classical Mapping Efforts	86
5.2.3	First Chicken Map	99
5.2.4	Subsequent Classical Mapping	100
5.3	Molecular Genetics and Whole-Genome Sequence	101
5.3.1	First-generation Molecular Maps	101
5.3.2	Physical Maps	103
5.3.3	Whole-Genome Sequence	105
5.3.4	Chicken Genome and Sequence Features	107
5.3.5	Genetics and Molecular Mapping in Other Birds	110
5.4	QTL and Functional Genomics	120
5.4.1	QTL Analysis	120
5.4.2	QTL: Growth, Meat Quality, and Productivity	120
5.4.3	QTL: Egg Quality and Productivity	122
5.4.4	QTL: Disease Resistance	122
5.4.5	QTL: Behavior	123
5.4.6	Toward Functional Genomics of Poultry	123
5.5	Other Molecular Applications	124
5.5.1	Biodiversity Studies	124
5.5.2	Molecular Sexing	125
5.6	Conclusions	126
	References	126

6 Turkey

Kent M. Reed

6.1	Introduction	143
6.1.1	Origin and Domestication	143
6.1.2	Taxonomy and Zoological Description	144
6.1.3	Modern Breeding Objectives	144
6.1.4	Economic Importance	145
6.1.5	Karyotype and Genome	147
6.1.6	Classical Mapping Efforts and Limitations	147

6.2	Construction of Genetic Maps.....	148
6.2.1	Genetic Markers.....	148
6.2.2	Primary Genetic Linkage Maps.....	151
6.2.3	Second-generation Linkage Map.....	151
6.2.4	Integrative Mapping.....	153
6.2.5	Comparative Mapping.....	154
6.2.6	Other Comparative Studies.....	155
6.2.7	Physical Mapping.....	157
6.2.8	The Next-Generation Physical Maps.....	157
6.3	Advanced Works, Functional Genomics.....	158
6.3.1	ESTs, Microarrays, and SAGE.....	158
6.3.2	Candidate Gene Mapping.....	159
6.4	Conclusion.....	160
	References.....	160

7 Rabbit

	Claire Rogel-Gaillard, Nuno Ferrand, and Helene Hayes.....	165
7.1	Introduction.....	165
7.1.1	History.....	165
7.1.2	Taxonomic Position.....	165
7.1.3	Physical Characteristics.....	166
7.1.4	Breeds.....	166
7.1.5	Domestication, Phylogeny, and Genetic Diversity.....	167
7.1.6	Economic Importance.....	171
7.2	Molecular Genetics.....	175
7.2.1	Cytogenetics.....	175
7.2.2	Genetic Molecular Markers.....	176
7.2.3	Physical Mapping Tools.....	204
7.2.4	Sequencing Data.....	204
7.2.5	Bioinformatics Tools.....	205
7.2.6	Expected Tools and Development.....	206
7.2.7	Genome Mapping.....	206
7.3	Future Scope of Work.....	220
7.3.1	Using Rabbits to Study the Domestication Process.....	220
7.3.2	Using Rabbits to Study Color Patterns.....	220
7.3.3	Using Rabbits to Study Early Embryonic Development.....	220
7.3.4	Using Rabbits to Produce Embryonic Stem Cells and Validate Candidate Genes.....	221
7.3.5	Perspectives of the Rabbit as a Farm Animal.....	221
	References.....	223

8 Dog

	D.S. Mosher, T.C. Spady, and E.A. Ostrander.....	231
8.1	Introduction.....	231
8.1.1	Dog Breeds.....	231
8.1.2	Genetic Diversity and Dog Breeds.....	233
8.1.3	The Superfamily Canoidae.....	234
8.1.4	Mitochondrial DNA (MtDNA) Analysis of Canids.....	234
8.1.5	The Domestic Dog Population.....	236

8.2	Molecular Genetics of Dogs	237
8.2.1	Canine Linkage and Radiation Hybrid Maps	237
8.2.2	Comparative Maps	238
8.2.3	Survey Sequence and a Canine Gene Map	239
8.2.4	The 7.5x Canine Genome Sequence	240
8.2.5	Single Gene Traits	241
8.2.6	Complex Traits	244
8.2.7	Resources	249
8.3	Future Scope of Work	250
	References	251

9 Pig

C.W. Ernst and A.M. Ramos	257
9.1 Introduction	257
9.1.1 History and Description	257
9.1.2 Economic Importance.	258
9.1.3 Breeding Objectives	258
9.2 Molecular Genetics of Pigs.	259
9.2.1 Genetic Maps	259
9.2.2 Physical and RH Maps.	260
9.2.3 Pig–Human Comparative Maps.	260
9.2.4 Quantitative Trait Loci	261
9.2.5 Candidate Gene Discovery	262
9.2.6 Marker-Assisted Breeding.	264
9.3 Functional Genomics	265
9.3.1 Expressed Sequence Tags	265
9.3.2 DNA Microarrays.	265
9.4 Future Scope of Work	266
9.4.1 Swine Genome Sequencing.	266
9.4.2 Expression QTL	266
9.4.3 Conclusion	268
References	268

Genome Mapping and Genomics in Domestic Animals

Cockett, N.E.; Kole, C. (Eds.)

2009, XVI, 280 p. 49 illus., 12 illus. in color., Hardcover

ISBN: 978-3-540-73834-3
