1	Epidemiology of Osteoporosis	1		
1.1	Osteoporosis: A Silent Thief!	1		
1.2	Osteoporosis: The Global Scope of the Problem	2		
2	Biology of Bone	7		
2.1	Bone: An Architectural Masterpiece	7		
2.2	Bone: A Permanent Building and Rebuilding Site	10		
2.3	Remodelling Units	15		
2.4	Some Biological Perspectives on the Mechanisms Involved in the Control and Regulation of Bone Remodelling	17		
2.5	Minimodelling	18		
2.6	Stimuli, Triggers and Mechanisms of Activation of Bone Remodelling	19		
2.7	Control of Bone Remodelling: A Network of Complex Mechanisms	20		
2.8	Osteoimmunology: A Representative of Systems Biology	23		
2.9	The RANK/RANKL/Osteoprotegerin System	23		
2.10	Leptin: Role of the Central Nervous System in Regulation of Bone	25		
2.11	Growth of the Embryo in the Uterus...	26		
2.12	Peak Bone Mass: An Investment for a Healthier Life	27		
3	Pathogenesis of Osteoporosis	29		
3.1	Factors in the Development of Osteoporosis	29		
3.2	Definition of Osteoporosis	30		
3.3	Osteoporosis – Which Bones are Vulnerable?	31		
3.4	Osteoporosis – Also a Question of Quality!	32		
3.5	Definition of “Fracture”	34		
3.6	Vertebral (Spinal) Fractures	34		
3.7	Hip Fractures	36		
3.8	Wrist Fractures	37		
3.9	Other Fractures	37		
4	Subgroups of Osteoporosis	39		
4.1	According to Spread	39		
4.2	According to Age and Sex	40		
4.3	According to Extent	42		
4.4	According to Histology	43		
5	Risk Factors for Fractures	45		
5.1	Risk Factors Which Cannot (Yet) be Influenced	46		
5.2	Risk Factors Which <i>Can</i> be Influenced	48		
6	Clinical Evaluation of Osteoporosis	55		
6.1	Indicative Symptoms	55		
6.2	Osteoporosis and Teeth, Skin and Hair – What are the Connections?.....	57		
6.3	Role of Conventional X-Rays in Osteoporosis	57		
6.4	Other Useful Imaging Techniques	60		
7	Bone Density in Osteoporosis	63		
7.1	Why Measure Bone Mineral Density?	63		
7.2	Which Instruments to Use?	63		
7.3	Which Bones to Measure?	70		
7.4	Who is Due or Overdue for a BMD Test?	70		

7.5	Bone Densitometry in Children – Now Readily Available!	72	11	Treatment Strategies in Osteoporosis	99
7.6	BMD Measurement – Not a Scary Procedure, Nothing to be Afraid of!	73	11.1	Evidence-Based Strategies for the Therapy of Osteoporosis ...	99
8	Laboratory Evaluation of Osteoporosis ..	75	11.2	Comprehensive Approach to the Therapy of Osteoporosis	103
8.1	Recommended Tests	75	11.3	Indication for Treatment – Combining BMD with Clinical Factors	104
8.2	Significance of Markers of Bone Turnover	75	12	Management of Pain in Osteoporosis	107
8.3	Recommendations for Practical Use of Bone Markers	79	12.1	Start with the Patient, not the Disease!	107
8.4	Potential of Bone Biopsy in Clinical Practice	79	12.2	Acute Phase	107
8.5	When is a Bone Biopsy Indicated?....	80	12.3	Chronic Phase – Short Term	108
8.6	Up-to-Date Methods	81	12.4	Chronic Phase – Long Term	109
9	Prevention of Osteoporosis	83	12.5	Electric Potentials in Bone	109
9.1	Step 1: First of all a Calcium-Rich Diet!	83	13	Calcium and Vitamin D	111
9.2	Step 2: Ensure an Adequate Supply of Vitamins!	85	13.1	Calcium: A Lifelong Companion	111
9.3	Step 3: Protect the Spine in Everyday Life!	86	13.2	The Concept of Vitamin D in the 21st Century	113
9.4	Step 4: Regular Physical Activity – for the Preservation of Strong Bones!	87	13.3	Vitamin D: Don't Rely on Sunshine, Take Supplements	114
9.5	Step 5: No Smoking, Please!	90	13.4	Rickets	115
9.6	Step 6: Reduce Nutritional “Bone Robbers”!	90	13.5	Other Vitamins Involved in Skeletal Health	117
9.7	Step 7: Strive for an Ideal Body Weight!	91	14	Hormones for Replacement Therapy	119
9.8	Step 8: Identify Drugs that Cause Osteoporosis and Take Appropriate Steps to Counteract Them When Possible and Necessary!	92	14.1	Hormone Replacement Therapy for Women – Now Recommended for Symptoms Only!	119
9.9	Step 9: Recognize Diseases Which Damage Bones!	92	14.2	Which Oestrogens and Progestins, and How to Take Them?	120
9.10	Step 10: Management of Patients Who Have Already Sustained a Fracture	93	14.3	Which Women to Treat?	121
10	Physical Activity and Exercise Programs	95	14.4	How Long to Treat?	121
10.1	Strong Muscles Make and Maintain Strong Bones!	95	14.5	How to Monitor HRT?	121
10.2	The Muscle–Bone Unit and Sarcopenia	96	14.6	What are the Risks and Adverse Events of HRT?	122
10.3	Exercise Programs – Preventive and Restorative	97	14.7	What are the Main Contraindications?	122
10.4	Implementation of a Training Program	97	14.8	Natural Oestrogens – How Effective are They?	122
			14.9	Dehydroepiandrosterone (DHEA) – Is it Useful for the Prevention of Bone Loss?	124
			14.10	Testosterone – Good for Bones and Well-Being in Men!	124
			14.11	Anabolic Steroids – Strong Muscles for Healthy Bones!	124

15 Bisphosphonates	127	22.1 Adherence to Treatment	161
15.1 A Brief Survey of Bisphosphonates	128	22.2 Monitoring Treatment	161
15.2 Pharmacokinetics	131	23.3 Monitoring Antiresorptive Therapy	163
15.3 Toxicity and Contraindications	132	24.4 Monitoring Osteo-anabolic Therapy	164
15.4 Osteomyelitis/Osteonecrosis of the Jaw (ONJ)	133	23 Osteoporotic Fractures	165
15.5 Contraindications	135	23.1 Fragility Fractures	165
15.6 Oral Bisphosphonates Currently Used in Osteoporosis	135	23.2 Fractures and the Healing Process	166
15.7 Alendronate	135	23.3 Effects of Drugs and Lifestyle on Fracture Healing	167
15.8 Risedronate	136	23.4 Risk Factors for Osteoporotic Fractures	168
15.9 Etidronate	137	23.5 Management of Osteoporotic Fractures	171
15.10 Ibandronate	137	23.6 Prevention of Further Fragility Fractures with Specific Drugs	171
15.11 Intravenous Bisphosphonates for the Treatment of Osteoporosis	138	23.7 Fracture Sites and Their Clinical Significance	171
15.12 Ibandronate	138	24 Pregnancy and Lactation	179
15.13 Zoledronate	138	25 Osteoporosis in Men	183
15.14 Clodronate and Pamidronate	139	25.1 Clinical Evaluation of Osteoporosis in Men	183
15.15 Recommendations for Intravenous Therapy	139	25.2 Special Features in Men	186
15.16 Duration of Therapy with Bisphosphonates and Long-Term Studies	139	25.3 Prevention and Treatment in Men	186
15.17 A Summary of Results Achieved to Date	140	25.4 Therapy of Osteoporosis in Men ...	187
15.18 Meta-analyses of Antiresorptive Substances	142	26 Osteoporosis in Children	189
16 Selective Oestrogen-Receptor Modulators	145	26.1 First Clarification – Hereditary or Acquired?	189
16.1 A Brief Overview of SERMs – New Selective Antiresorptive Agents	145	26.2 Idiopathic Juvenile Osteoporosis, Idiopathic Juvenile Arthritis, and Other Conditions	194
16.2 Raloxifene – Utilization of Physiological Effects on Bone	145	26.3 Osteogenesis Imperfecta Must Not Be Overlooked!	195
17 Peptides of the Parathyroid Hormone Family	149	26.4 Turner Syndrome and Charge Syndrome	197
17.1 Osteoanabolic Action of PTH – Paradoxical Effects Depend on Type of Administration	149	26.5 X-Linked Hypophosphatemic Rickets	197
18 Strontium Ranelate	153	26.6 Gaucher's Disease	197
19 Calcitonin and Fluoride	155	27 Immobilization Osteoporosis	199
20 Combination and Sequential Therapies	157	27.1 Examples of Bone Loss	199
21 Future Directions	159	27.2 Space Travel and the Force of Gravity	200
22 Adherence and Monitoring of Osteoporosis Therapy	161	27.3 Therapy of Immobilization Osteoporosis	200

28 Osteoporosis in Medical Disciplines	203
28.1 Assessment of Secondary Osteoporoses	203
28.2 Cardiology	203
28.3 Dermatology	205
28.4 Endocrinology	205
28.5 Gastroenterology	207
28.6 Genetics	207
28.7 Haematology and Storage Disorders	208
28.8 Infectious Disorders	210
28.9 Nephrology	211
28.10 Neurology and Psychiatry	212
28.11 Oncology	212
28.12 Pulmonology	213
28.13 Rheumatology and Immunology ...	213
29 Osteoporosis and Drugs	215
29.1 Corticosteroid-Induced Osteoporosis	215
29.2 Transplantation Osteoporosis	217
29.3 Tumour Therapy-Induced Osteoporosis	219
29.4 Drug-Induced Osteoporomalacia ...	222
29.5 Antiepileptic Drug-Related Osteopathy, a Pressing Need for Better Understanding	222
30 AIDS Osteopathy	225
30.1 Manifestations of AIDS Osteopathy	226
30.2 Diagnosis	227
30.3 Treatment Strategies	228
31 Renal Osteopathy	229
31.1 Definition	229
31.2 Pathophysiology	229
31.3 Symptoms	230
31.4 Biochemical Investigation	230
31.5 Radiological Investigation	230
31.6 Treatment Strategies	231
32 Localized Osteopathies	233
32.1 Complex Regional Pain Syndrome (CRPS)	233
32.2 Transient Osteoporosis and the Bone Marrow Oedema Syndrome (BMOS)	235
32.3 Vanishing Bone Disease (Gorham-Stout Syndrome)	239
32.4 Fibrous Dysplasia	241
32.5 Paget's Disease of Bone	242
33 Periprosthetic Osteoporosis and Aseptic Loosening of Prostheses	247
33.1 Pathogenesis	247
33.2 Diagnosis	249
33.3 Treatment Strategies	249
33.4 Bisphosphonates	249
34 Oral Bone Loss, Periodontitis and Osteoporosis	251
34.1 Oral Bone Loss and Systemic Osteoporosis	251
34.2 Pathogenesis of Periodontitis	251
34.3 Clinical Findings	251
34.4 Treatment Strategies	252
34.5 Bisphosphonates	252
35 Disorders of Bone Due to Tumours	253
35.1 Links Between Osteoporosis and Cancer	253
35.2 Tumour-Induced Hypercalcaemia (TIH)	253
35.3 Tumour-Induced Bone Pain (TIBP)	254
35.4 Skeletal Manifestations in Multiple Myeloma (MM)	256
35.5 Skeletal Metastases – The Fundamental Problem in Clinical Oncology	257
35.6 Skeletal Metastases of Breast and Prostate Cancer	259
36 The Metabolic Syndrome – A Major Cause of Osteoporosis in the World Today	265
